No. 83. 'Portrait of the Painter,' VELASQUEZ;—Right Hon. Lord Francis Egerton, M.P. This portrait is (if our memory serve us) similar to that which hangs near those of Rubens and Vandyke in the famous collection of portraits at Florence; it is, however, more brilliant, thanks to cleaning and varnish. It is a remarkable portrait, such as once seen can never be forgotten; the figure is drawn up with Spanish hauteur, looking rather the soldier than the painter: in short an epitome of the *morale* of Spain in the time of Velasquez.

No. 98. 'Christ triumphant over Sin and Death,' RUBENS—Charles Bredel, Esq. One of the artist's sketches on panel—thin, free, and decided; the subject is so well detailed as to require no explanatory title.

No. 101. 'Head of an Old Man,' REMBRANDT—Lord Colborne. Made out with his usual simplicity and force, giving the workings of the face without destroying its breadth. Had we never seen any other of the works of Rembrandt than this, we could believe him prone to any extravagance, as well in the use of the brush as of paint; and pictures of his do exist which seem rather to have been executed with a trowel than a brush. On the other hand, others there are, exhibiting the utmost care in finish. This picture is in the style of some of the best of his productions.

No. 107. 'Girl looking from a Window,' REMBRANDT—Dulwich College. Female beauty had no charm for Rembrandt; we find his female figures generally the coarsest of their sex. The girl is leaning at the window, and is painted with much force and firmness, and with no other effect than that of the simplest truth.

No. 113. 'Christ disputing with the Doctors'—SPAGNOLETTA. A group of large half-length figures, with the principal light falling on the head of the Saviour, the energy and purpose of which has been weakened in an attempt at exaltation which has failed. The heads generally of the doctors are earnest, intent, and abounding in power, even amid confusion and embarrassment.

No. 114. 'Landscape, with Cattle and Figures,' PAUL POTTER—Duke of Bedford. A simple and unpretending composition, but with the appearance of having been touched upon; the weak points of the artist are in some parts more than usually conspicuous.

No. 115. 'Dort, from the River,' CUYP—R. S. Holford, Esq. This is a long picture, evidently two made into one, for the seam is yet visible up the centre: assuredly a most dangerous experiment, as is here seen, even although the pictures presented scenes in juxtaposition. Such a proceeding has of course rendered necessary much repainting, the freshness of which is apparent in the sky, parts whereof are painted in with a touch very different from the prevalent manner. The work is, however, of rare excellence, and seldom do we see a production of the master characterized by beauties so striking.

No. 118. 'A Village Fête,' TENIERS—Duke of Bedford. An open scene, with a countless multitude of figures, all busied in holiday making. This is by no means a fine specimen of the painter; it is throughout dry and flat in tone.

No. 119. 'River Scene—Fishing under the Ice,' CUYP—Duke of Bedford. This we believe to be the finest Cuyp in existence; it is not large, and although a winter scene, is warm and sunny. The foreground is occupied by some figures on the ice, under which they are introducing a net; while, in

the background, are seen other figures and houses. The light and air of this work can never be excelled; and with respect to its purity, that is intact.

No. 122. 'Landscape,' CLAUDE—Sir Thomas Baring, Bart. A sunny distance, with a dark and woody foreground, a common style of composition with the artist. The management of the distance shows, as usual, infinite purity and tenderness, and the remainder executed with fine feeling; but yet the picture is not in the *capo d'opera* style of the master.

No. 123. 'Portrait of the late James Northcote, Esq., R.A.,' HARLOWE—Sir John Swinburne, Bart. This is a small painting, but it is extremely beautiful. Northcote is here aged and failing, pale and in ill health; it is wrought into a fine and feeling picture of an intellectual old man.

No. 124. 'Portrait of Sir William Beechey, R.A.,' HARLOWE—James Goding, Esq. A work of the same size, but of another character, the subject being in the enjoyment of health and in the vigour of life.

No. 125. 'Sin and Death,' FUSELI—H. A. J. Munro, Esq. Partaking strongly of the extravagance of the artist; the flesh is qualified with a strong green hue; but the picture being high, it is impossible to examine it closely.

No. 129. 'A Lady with a Spaniel,' H. WYATT—William Wells, Esq. A small portrait, very charmingly composed; the lady is seated, and the spaniel is fawning upon her; the whole is admirably coloured.

No. 133. 'Landscape, with Cattle,' GAINSBOROUGH—William Wells, Esq. A small sketch—of a close scene with cattle—the whole painted with great freedom, and such an effect as nature alone could supply.

No. 134. 'Jessica,' G. S. NEWTON—William Wells, Esq. This is not Jessica, but rather a marriageable rustic English maiden of the time of the Stuarts, and in her Sunday gear.

No. 136. 'The Fair Student,' G. S. NEWTON—Hon. Edward Phipps. A picture well known through the engraving. The figure is seated, and earnestly perusing a volume which lies open on her knee.

No. 137. 'View in Venice,' BONINGTON—Sir Thomas Baring, Bart. A small sketch, rapidly and decidedly painted, with a cool but strikingly natural effect.

No. 138. 'A Landscape,' BONINGTON—H. A. J. Munro, Esq. Another small picture, which we cannot describe better than by saying that it seems to have been done in about an hour. As usual, it is forcible, and in manner of composition resembles much a water-colour drawing.

No. 145. 'Portrait of Viscountess Palmerston, when a child,' Sir T. LAWRENCE—Viscountess Palmerston. The head of a child painted with the utmost simplicity; the handling about the face is somewhat hard and coarse, but the head is exquisitely drawn, and the hair charmingly represented.

No. 146. 'Portrait of John Flaxman, Esq., R.A.,' JOHN JACKSON—Lady Dover. The mild and unassuming features of Flaxman are known to every body; they are here finely drawn, and brought forward with a reflective sentiment exhibiting the original as a habitually deep thinker.

No. 147. 'View on the Banks of the Tiber, with Rome in the distance,' WILSON—H. A. J. Munro, Esq. This is the best production we have of late seen by this painter. The materials of the composition and their management are ordinary enough, but it is the greatest proof of power to deal thus effectively with commonplaces. The near parts of the picture are in determined shadow, which, aided by some firmly painted trees, throws off a deliciously tender and airy distance. A favourite feature in the distances of this artist is a track of land painted with a rather positive tint of ultramarine, which, retaining its freshness after all the other tints are subdued, becomes sometimes too prominent.

No. 148. 'Shylock and Jessica,' G. S. NEWTON—Right Honourable H. Labouchere, M.P. This is another-known composition, of which the Shylock is a very well-conceived character; but, again, Jessica is not the daughter of such a man—in nowise a portrait after the spirit of the immortal verse of Shakspeare.

No. 150. 'The Death of General Wolfe,' BENJAMIN WEST—Marquis of Westminster, K.G.

Every circumstance with regard to this famous composition is, we believe, so well known as to require no allusion here. We saw it some years ago, and it is now, as then, in excellent preservation. Such works, independently of their merit, are interesting as associated with the early history of British Art.

No. 154. 'The Opening of Waterloo Bridge,' JOHN CONSTABLE—Sir Thomas Baring, Bart. The tone is, as usual, extremely sober, and everything beautifully indefinite. To many observers this production will appear as of very careless execution, but it is so significantly wrought that each slightest touch may be read with a strong meaning. It is an extraordinary picture, but we cannot but think that the author would have provided better against the effects of time had he forced the lights a little more, for it is to be feared that the points of light will be ultimately lost.

No. 158. 'Portrait of the Painter, JOHN JACKSON—Lady Dover. Few portraits exist that possess the qualities of vigour, intelligence, and language in any higher degree than this head; it exhibits power of that kind which rejects the usual resources of embarrassment and imbecility: although not equal to his portrait of Dr. Wollaston, it is distinguished by many of its most striking points.

No. 164. 'The March to Finchley,' HOGARTH—The Governors of the Foundling Hospital. Another picture essentially of our own school. The whole composition is a most pungent satire—every figure is a pithy line. The descriptions are sometimes coarse, but the meaning of the author is not to be mistaken.

No. 165. 'Charles I. demanding the five impeached members, viz., Denzil Hollis, Sir Arthur Haslerig, John Pym, John Hampden, and William Stroud,' JOHN S. COPELEY—The Lord Chancellor. This is a large picture, and by no means equal to other known works by the same hand. It abounds with figures and heads, but the faces want expression, and some of the figures are ill drawn.

No. 166. 'Portrait of the Right Hon. Francis T. Baring, when a boy,' Sir THOMAS LAWRENCE—Right Hon. Francis T. Baring, M.P. This is placed very high, being an unfinished sketch, but in any position it would attract notice.—No. 168 is a similarly imperfect work, by the same painter, and is 'A Portrait of Charles Baring Wall, Esq., when a boy.' This is also remarkable for many beauties in as far as it has been carried.

No. 170. 'The Death of Eli,' BRAD—Duke of Sutherland, K.G. The composition consists of many figures disposed and finished with a fine apprehension of effective incident. It may, however, be observed that the perturbation of the assembled crowd is premature, and affects those who cannot be supposed to see Eli as he is falling; yet the picture is one of a high class, being distinguished by very many of the qualities which betoken genius of the first order.

No. 172. 'The Strada Nomentana,' WILSON—William Wells, Esq. The materials and colour of this artist vary but little; they are simple and substantial, sufficiently showing that he has long walked with nature. It is obvious that this is a veritable locality—such objects would not be thus brought together in composition.

No. 176. 'A Woody Landscape,' GAINSBOROUGH—Jesse Watts Russell, Esq. Another study from the only school wherein truth is to be found. There is no attempt to refine upon the rugged nature of this sylvan passage, the value of which consists in its very roughness. The clouds are somewhat too solid and opaque; had they been less so, the lower part of the picture would have received increased force.

No. 178. 'The Kemble Family,' HARLOWE—T. Welsh, Esq. We are happy to have an opportunity of examining this really fine picture. As constituted of portraits, the artist has of course been limited; but it cannot be denied that he has not made the most of his materials. Every figure of the composition contributes its quota to the scene; the expression of each is most eloquent and appropriate; and of all the features, there is in the eyes especially an unequalled intensity. It is, on the whole, an admirable composition, and will remain a lasting monument to the honour of him whose work it is.

No. 179. 'The Raising of Jairus's Daughter,' H. THOMPSON—Thomas Chamberlayne, Esq. This is a large picture, and looks as if it had been

studied and painted figure by figure. There is a want of fitting character generally, and the spectator is struck with the peculiarity of the figure of the daughter—yet inanimate, and partially raised upon her couch. Pictorial arrangement has been so little consulted here.

No. 182. 'Horses at a Fountain,' GAINSBROUGH—Earl of Lonsdale, K.G. An upright scene, closed in by trees; two horses, one of them carrying a man, are drinking at a fountain. The scene is dark, rich, and painted with a full and a free brush.

No. 190. 'Head of a Monk,' COLBAUGH—Marquis of Lansdowne, K.G. One of the pictures exhibited as specimens of German painting. The head is enveloped in a white hood, and the eyes directed downwards. There is in this production nothing to lead us to suppose its author occupying a higher position than that of a fourth or fifth-rate grade. It is in execution timid, thin, and ineffective.

No. 191. 'Christ Blessing the Little Children,' Professor HESSE—Philip Henry Howard, Esq., A.P. In the manner of old German and Italian pictures the figures here are backed by gilding. The composition is extremely artificial, and there is a great want of character in the figures; in short, the whole work is a tribute to the memory of the old painters of the fifteenth century, and painted in an enthusiastic admiration of them. Such a picture, therefore, cannot be looked upon with the same feelings with which we consider the productions of earlier painters. We are unwilling to regard this as a fair specimen of Hesse: it abounds with fallacies and evidence of misdirected study. It argues that all worth aiming at in painting was long centuries ago—a position which cannot be granted by any reasonable man.

This exhibition, did it consist of the works of Reynolds alone, would be one of the greatest attraction; his works are, however, associated with others of the highest character, many whereof we are compelled to omit. Many of these compositions, as engravings, have been long held in high estimation by the public; and it is gratifying thus to have an opportunity of refreshing a remembrance of such works, at least we feel it so, and also feel that to all well-wishers of British Art the sentiment must be common.

#### JOHN CONSTABLE, R.A.\*

Mr. Leslie has fulfilled a very painful duty, in a very feeling manner. No better monument can be raised to a man's fame than the record of his acts, his own words; and the illustration of his talents by proofs supplied by his productions. It is true an artist's life can possess but little of stirring interest; but the early struggle, and final success, the progress of the mind, the vacillations and energetic course of genius, all the varied incidents that form the light and shade of individual character, create and nourish in his behalf feelings to which he unlearned even are naturally subject, and which he educated refine by association. As the price of his work (we have reason to believe already very scarce,) is such as to place it beyond the reach of any of our readers, we shall endeavour to draw up a general narrative of its contents, premising that it has been kindly and considerately written, blending with all that bears relation to painting such details as are fitted to make the reader acquainted with Constable in the private relations of life. He was born on June 11th, 1776, at East Bergholt, in Suffolk. Golding Constable, his father, inherited a considerable property from his uncle, and had settled there some time prior to his marriage with Miss Ann Watts, a lady who united a sound judgment and much apparent perseverance of character with the feelings of a pure heart. John, her second son, was sent first to school at Lavenham, and from hence removed to Dedham under the care of Dr. Grimwood, where even at this time he betrayed his inclination towards the Fine Arts. During the French season a pause would occur, which the master was the first to break—with "Go on, sir, I am not asleep; Oh! now I see you are in your painting room." His father was at first disinclined to his son's choice of a profession: he would have educated him for the

church, but, upon his aversion to the requisite studies, next determined to make him a miller. For about a year he was thus employed, nor was his time lost: he studied nature under every varied aspect, made his mind familiar with her scenery, and educated at once his eye and his imagination. Sir George Beaumont was, at this period, a frequent visitor at Dedham, and, by the assiduous kindness of his mother, Constable was introduced to him, an advantage which he ever appreciated, as it opened sources of pleasure not limited exclusively to Art, but dependant upon the exercise of the highest qualities of the mind. But London was now the point towards which his desires turned: it was there he must test his chance of success, for to a youthful mind the praise or censure of the metropolis is the life or death of Ambition and of Hope. He arrived there in 1795, favoured by Priscilla Wakefield with a letter of introduction to Farington, and became soon after acquainted with "J. T.," better known as "Antiquity Smith." He returned again to East Bergholt until 1799, when he resumed the pencil, and in 1800 was admitted a student of the Royal Academy. In his drawings and paintings from the living model he gave early indications of great breadth of light and shade; and this, and a close observance of nature, a desire never to sacrifice truth for artificial effect, may be cited as generally characteristic of his style. "There is room enough," said he, "for a natural painter; the great vice of the day is *bravura*—an attempt to do something beyond the truth." Such was then his code. From this period to 1809 he steadily advanced; the Royal Academy annually received his works, although his style had obtained no marked expression of opinion in its favour. The most interesting episode in his life was the period of his acquaintance with Miss Bicknell, the grand-daughter of Dr. Rhudde, rector of East Bergholt. Brought up together, or at least much associated, they became early attached, but their union was prevented, not because "war, death, or sickness did lay siege to it," but on account of family differences, and the uncertainty of his prospects.

The little we are enabled to glean from this lady's letters is, nevertheless, a rich tribute to the qualities both of her mind and heart—a fervent religious feeling—an unhesitating affection—that calm intrepidity of mind, which meets, subdues, or endures affliction, a strict sense of duty and womanly devotion to its claims; such were her characteristics, such the means at her disposal to promote the happiness of life. Good and evil, prosperity and misfortune, however alternately chequer our lot of life, which resembles rather the fitful radiance of an April day, than the beauty of summer, or the dread waste of winter. In 1814, his mother died; and in 1816 he lost his father, but as he had steadily advanced in life, brighter prospects dawned, affection overcame every other consideration, and he was united to Miss Bicknell on the 2nd of October, 1816. They were married by Archdeacon Fisher, at whose house at Osmington they spent their honeymoon, and who had been from the earliest period his most considerate adviser, earnest patron, and steady friend. From this time his career is that solely of the artist. 'The Harvest-field, with Reapers,' 'Wivenhoe Park,' 'A Cottage in a Corn-field,' 'A View in the Stour,' were successively exhibited, annually followed by others, it is hardly requisite to notice, unless we were to submit them, which neither our space nor opportunities allow, to critical review. It is with the artist as the author, when memory revives the form, and the imagination endows with life, and makes every reminiscence once more indistinct with incident; feelings linked with many pleasures, and affections quickly throb again as we trace the history of the past; every production, the book, the picture, here possess an increased interest, they become chapters in the History of Genius; evidences we cannot disavow, of its fitfulness, its source and stream: how, first hardly discernible, it struggled within its narrow bank, or rushed onward in the might and majesty of its broad and unchecked career.

In 1820, he settled at Hampstead, from which time, except from occasional ill health, his pursuits were but little changed. His letters to his family and friends, written at intervals of occasional absence from home, exhibit a calm sense and enjoyment of happiness, those dated from Cole Orton, fragmentary as they are, possess particular interest

from the view they present to us of the amiable characteristics of his friend, Sir George Beaumont. "His accomplished host and he agreed generally in their tastes, yet they differed in opinion on some points relating to Art, and their discourse never languished for want of an animated 'No.' Sir George recommended once the colour of an old Cremona fiddle for the prevailing tone of everything, and to this Constable replied by laying an old one on the green lawn before the house. Again Sir George, who seemed to consider the autumnal tints necessary at least to some part of a landscape, said "Do you not find it very difficult to determine where to place your brown tree?" and the answer was, 'Not in the least, for I never put such a thing into a picture.' In 1824, some of his pictures were exhibited in Paris, where Count Forbain, the Director, gave them, to use his own expression, "two prime places in the principal room." To 1827, every year was marked by the composition of works of varied interest and excellence. 'The Chain Pier at Brighton,' 'Hampstead-Heath,' 'The Corn Field,' and 'The Glebe Farm,' were his principal productions. But the even tenor of his way, the whole current of his life, the past and the future of the mind and feeling, were crushed and withered by the fearful affliction of the succeeding year. Mrs. Constable died on November 23rd, 1828. Nature was never again so beautiful to him: the canvas might reflect the scene, but he could never re-impart its former animation. Affliction for the dead unnerves the powers and withers the genius of the living; enjoyment, pursuit, hope, are henceforth idle sounds; time itself becomes but an indistinct echo of the past, and all that arrests the eye, or is obvious to sense, starts up before us the saddened evidences of the things that were. Friends were around to cheer, Art still allured him in the society amid which his home was nestled, there was all that could recreate or console; but you cannot supply the loss of one in youth selected as the source of happiness, and in manhood prized as the cause of its enjoyments. On the 10th of February, 1829, he was elected an Academician. That this distinction should not have been conferred on him at a much earlier period is a proof that the progress of an original style of Art in the estimation of artists is very low." Much as he was pleased at the attainment of this honour, he could not help saying "It has been delayed until I am desolate and cannot impart it." Constable worked not for the applause of the living: he could not lead, he would not follow opinion when he laboured; it was for reputation that should hallow the memory of the dead. Fearful and embittered were the few events which gathered in darkness around the close of his career. Lawrence, Jackson, Ward, Fisher, the younger Dunthorne, fell around him; in Art there was less and less resource, as he daily felt the honours he had struggled to win he could not enjoy, and dared not now expect. On the 30th of March, 1837, he returned home from a charitable errand connected with the Artists' Benevolent Fund. He awoke in the night in great pain and called for the assistance of his son: it was too late, within half an hour his life was extinct.

"Eheu! quam tenni e filo pendet  
Quidquid in vita maxime ardet."

Of Mr. Constable's character in private life this biography is sufficiently indicative. His thoughts were original, his manners simple and unaffected, he had as little conventionalism in address as in Art; he was unrestrainedly amiable and really refined. In satire he was rather humorous than severe: it seemed rather the result of a sharp perception of the ridiculous than the irony of a cutting spirit. Satire is besides, in general, a defensive weapon, and hurtful only to the silly sensitiveness of restless vanity. In charity and demeanour to the humble classes he was an example to all; as his spirit was released from earth it was heralded by an act of good. His lectures afford no great opportunities of estimating his literary powers; they are sound in criticism, and correct in details, but as compositions tame. We earnestly recommended the purchase of this book: it is profusely illustrated with engravings by David Lucas, and printed with the care and taste which distinguish the publications of Mr. Carpenter.

\* Memoirs of the life of John Constable, Esq., R.A., composed chiefly of his letters, By C. R. Leslie, Esq., L.A. London: James Carpenter, Old Bond-street. 8to. 842.

## INSTITUTE OF THE FINE ARTS.

A NUMEROUS, professional and otherwise, meeting, for the purpose of establishing an association to be called the "Institute of Fine Arts," took place on Saturday, June 3, at the Freemasons' Tavern, Great Queen-street, Lincoln's Inn-fields. Amongst the company assembled were several liberal supporters of the Fine Arts.

Mr. Wyse, M.P., who, shortly after eight o'clock, was called on to preside, was surrounded by a large number of gentlemen of reputation and talent, among whom were Mr. A. Clint, Mr. G. R. Ward, Mr. Hurlstone, Mr. A. Aglio, Mr. E. W. Wyon, Mr. E. Duncan, Mr. Davis, &c. Mr. Wyon, as provisional secretary, proceeded to read to the meeting the conditions upon which it was proposed to found the institute, the object of which was to facilitate the intercourse of members of the profession; to cultivate a pure taste, and a full and just appreciation of the importance of Art, to prevent the encroachment of influences injurious to it; to take cognizance of scientific questions connected with it; and to be a medium through which the opinions of the profession may be expressed. It was proposed to form a library and reading room; to collect works of Art, and all things which might afford the artist increased facility in his studies; to appoint stated times for hearing original papers; for the inspection of works of Art and antiquities; and to communicate generally on matters of importance to Art, science, and literature. It was hoped by the formation of the institute, entirely unconnected with any exhibition or school of instruction in Art, to bring their professional brethren together, and thus, by enlarging their communication one with the other, giving and receiving that information which mutual intercourse alone can procure, and which in every station of life was one of the greatest means of improvement. The committee also recommended that the institute be founded on the principle of strict neutrality, and laid down a code of laws for its general government.

Mr. Hurlstone, in moving that the foregoing propositions constitute the basis for the formation of the institute, observed that the distinction between it and all other existing societies connected with the Fine Arts, was, that they had a tendency to separate into sects or different cliques the various branches of that elevated profession, whilst this institute was to express the feelings of the whole body, being divested of those partial and peculiar interests which must always be attached to associations having a particular exhibition connected with it. It was not a rival to any existing society, but it would exercise a certain degree of influence over the whole.

Mr. Davis seconded the resolution, which, on being put from the chair, was carried unanimously. The Chairman said it was with extreme pride and pleasure that he found the few hints and suggestions he had thrown out at a meeting held by the artists of the metropolis during the latter part of the past year had resulted in the formation of so splendid an institution as that now, he might say, established. He took the liberty on that occasion of expressing his general impression on the state of Art in this country. The hon. gentleman further urged upon the institute the propriety of establishing a periodical for the advancement of Art and science exclusively, and concluded amidst loud cheering to offer his earnest and zealous co-operation in its support.

The names of upwards of one hundred gentlemen who had enrolled themselves members of the institute were then read over, and eighteen gentlemen were selected on a ballot to act as a council.

The other officers were then appointed, and a vote of thanks having been passed to Mr. E. W. Wyon and the committee of gentlemen who had mainly contributed to the formation of the institute, a similar compliment was paid to the chairman, and the meeting separated at a late hour.

[We have already alluded to a proposal to establish an association, to be called an Institute. If, when embodied, it advance the end proposed—that of promoting union among artists—it will effect an object whence much good may result.]

## THE ASCOT RACE PRIZES.

SIR,—As such matters have lately become connected with the Fine Arts, allow me to make your excellent periodical a vehicle for a few remarks on the Ascot Race Prizes.

The offering of a beautiful work of Art as a prize in this our national sport, must be productive of beneficial effects. It were even desirable that every stake for which horses start should be of this nature. It would remove the stain of greediness for money from our wealthy and noble sportsmen; it would create a field for the exertions of genius; and it would humanize an amusement, which, in the eyes of sensible and reflecting men, at present bears a very doubtful character. Racing, if carried on only upon patriotic principles, would be confined to the rich and the disinterested, to men who would vastly prefer seeing, in their halls, splendid works of Art, commemorative of their success in improving the breed of that noble animal, the horse, to the acquirement of money stakes, of which they do not stand in need. Our connecting money with our pleasurable pursuits, to the extent we do, degrades us in the eyes of the civilized world; and, as we excel all nations in this particular sport, it is greatly to be feared that our example will be dangerously contagious; indeed the present racing mania à l'Anglaise, in France, shows that it has already made some progress. Greatly admiring the horse, approving of our efforts to ameliorate his race, and, at the same time, honestly admitting I enjoy the excitement of the course, I hail this introduction of Art into its prizes with great pleasure.

I understand that the next great Doncaster Cup is to be an equestrian statue of the Duke of Wellington; and when I add that the finished work is to issue from the house of Mortimer and Hunt, and that the model is undertaken by our very first sculptor, I have reason to expect that it will be worthy of the aspirations of every noble sportsman.

But to the subject of my letter. To begin with the plateau, as executed by Edmund Cotterill, I cannot but consider it a failure. It is very beautiful, but not worthy of him who modelled the 'Hunting Party of Queen Elizabeth.' Edmund Cotterill has so much genius, and at the same time excels so greatly in the horse, that I wonder he should ever put forth a production that requires the reading of a long extract from a poem to make itself understood. A fine picture, a fine statue, or a beautiful piece of chasing, tells its own story; and when it does not, it humbles itself willingly before the art of poetry, and acknowledges its incapacity. To confine myself to a modern production; if you contemplate the 'Eve' of Baily, you require no inscription; he must be dull to the beauties and associations of Art, who does not at once perceive, that that splendid and magnificent specimen of female beauty is no Venus, no Maudslaw, but the mother of mankind—there is no character in either poetry or history to whom that grand yet lovely form could belong but to Eve. Were she standing, you feel that she would be as God made her, the perfection of his work, the female paragon of creation. And further, when we look at the face belonging to this noble woman, there is another story told—with all the beauty it has all the softer graces of the sex, and we contemplate with delight the source of all that is endearing, loveable, and heart-soothing in her daughters; the complacency even with which she surveys the reflection of her own beauty, has nothing of vanity or triumph; no other being was yet created or born to rival her; and her gaze is one of pure, unmixed admiration of God's most lovely work; no one can mistake Baily's 'Eve.'

But Mr. Cotterill's story is not only badly chosen, but, with all my admiration for him, he must excuse me if I think it is not well told. The stupid wonder of the peasant and the lumpishness of the ox, are, if the latter be quite requisite

to create the contrast between it and the Pegasus, pretty well expressed; but the two principal figures do not even relate the fact. The Apollo should be mounted; he is said to restore fire and animation to the winged horse; he is actually restraining him, and that powerfully. The hind feet of Pegasus should be still upon the earth, and his wings expanded; Apollo's left hand should be shaking a slack rein; he should lean a little forward, the visible leg pressed a little backward, urging, to the side of the horse; and, while his right hand points upwards, he should look with an air of triumph on the clod-compeller below; if the upper space would require filling, Mount Parnassus, with its fountain, or other classical objects, would, I am sure, present themselves in crowds to the good taste of Mr. Cotterill. Besides this, Apollo is, in youthfulness of appearance and effeminacy, a Ganymede rather than an Apollo, and would not be recognised were it not for the badly placed lyre. The restraining of the horse produces a painful effect upon the carriage of the head, and it wears the appearance of checked rage rather than of poetic fire. It is always dangerous, likewise, to show an animal essentially formed for one element exerting itself in another not natural to it; the best painter or sculptor, in my humble opinion, can make nothing of a flying man or woman, or a flying horse; the aptness, the fitness is violated, and nature will not allow of such freaks. An eagle or a condor does not paw the air; when the first upward spring is taken, the legs are put as much out of the way as possible, and so, if such things were, should be the legs of a winged horse; his wings are his legitimate means of progressing, and to make a fulcrum of the impalpable air for four palpable and small hoofs is ridiculous, and thus destroys the truthfulness, which is the excellence of poetry and art. Rich as the history of the real horse is in fine poetical situations, I wonder, greatly wonder, that the possessor of such talent and high genius as Edmund Cotterill should have thought of wandering into the regions of German poetry for a subject to grace the hall of an English sportsman. But though Homer nodded sometimes, he only required to be aroused.

The stag and hounds are beautiful, and yet not so without reservation. The distress of the stag, the eagerness of the dogs, particularly the foremost, are well expressed; the upward inclination of the stag's head and the consequent indentation of the neck, denote exhaustion and terror of its tormentors admirably; but why did the artist confine his display of energy to the forequarters of the animals? This is reversing the order of nature; all animal exertion springs from the loins, the fulcrum of the machine. Both the stag and the last dog are absolutely walking with their hind legs. When I first saw an engraving of it, I said it reminded me of the story of Garrick and Le Kain pretending to be drunk as they rode through a village. Whilst enjoying their laugh when the joke was over, "Did I not perform well?" said Le Kain. "No," said Garrick, "your legs were not drunk." So, there is no sign of exertion for life or death in the hind legs of these animals. I cannot be told that the positions are necessary for preserving the centre of gravity: a good artist can always overcome that difficulty. I should say that the dogs are hardly stag-hounds, and that the hair hanging beneath the neck of the stag was not quite natural; but these scarcely amount to an objection. With the slight exceptions I have mentioned, it is a beautiful and spirited work of Art.

The gem of the Ascot prizes I consider to be the Herne's Oak and group of deer—it is beautiful, quiet, tasteful, truthful, and perfect, which any one may prove by walking or riding through Windsor Park, where he will see twenty such groups in an hour. It is one of those neatly unobtrusive, pretty things, that strikes the observer at once. It has no lofty pretensions, but it is what it is meant to be. Whether its pure taste is not destroyed by the introduction of the branches,

nozzles, and lights, I cannot pronounce; were it mine I would not try the experiment. To give works of Art all their effect, and preserve all their chasteness, their association and fitness should never be violated in the smallest degree.

We have thus begun to connect even our outdoor and manly pleasures with the Arts; may the attempt prosper. The people to whom we look back for all that is intellectual and beautiful did not separate them; their paintings were exhibited at their public games, and their best poets exerted their talents to record the triumphs of the victors. Their coarse copyists, the Romans, have left us one monument of their sports, which speaks volumes of the brutality of the taste of a nation which arose upon an ocean of blood, and could only enjoy amusements in which its stream was shed. When I read of the wholesale slaughter of the arena, I am disgusted; but when I turn to the 'Dying Gladiator,' I am heartick. He was no common artist that executed that statue. Its effect is like that so admirably described by Sterne, when he prefers depicting the sufferings of a solitary captive, to attempting to describe those of millions. The entire history of the Roman people is suggested by that statue.

I scarcely know any field of Art so abounding in fine subjects as this of which my letter treats. The chariot-races of Homer, or even the beautifully described one of Télémaque, were admirable and appropriate ornaments for the circle of a splendid vase. But, above all, I should like to see the Arts employed upon Dibdin's "High Mettled Racer." The principal compartment should be the scene of triumph, when "The high mettled racer is in for the plate," while the various stages of the hunting-field, the post-chaise, and "the last scene of all, that ends this sad eventful history," the death in the sand-cart, would go beautifully round some magnificent vase, conveying a moral and infusing a sentiment. Could not the portraits of the most celebrated horses be likewise conveyed in this way? I could fancy a noble figure of Eclips, standing beneath a fine tree, being a subject worthy of any artist. The fortunate sportsman who would obtain it, would have the model of a perfect race-horse before him. His proportions are all traditionally handed down to us—his light neck, beautiful head, finely-sloping shoulder, deep bricket, wonderfully powerful loins, extraordinary hocks, and, above all, as a distinguishing characteristic, his withers standing in a line considerably below his wide hips and loins—these would point out Eclips—and he would be the Apollo Belvidere of horses. If my remarks should meet with the approbation of any of your artistical readers, I should be most happy to furnish them with a few of the subjects for this portion of Art that abound in my memory; but I will not further intrude on your valuable columns at present.

Yours, &c.

W. R.

#### ART IN CONTINENTAL STATES.

**GERMANY.**—*The Hermann Monument.*—The most colossal statue of modern times is that of San Carlo Borromeo, at Arona; but that stupendous figure will now be, if not quite rivalled in dimensions, surpassed as a work of Art, by the one of the ancient German hero, Hermann or Arminius, about to be erected on the summit of an eminence in the forest of Tentoburg, near Detmold, in Westphalia. The pedestal, which was commenced in September 1841, is itself an architectural mass of considerable magnitude, of circular form, presenting somewhat of the appearance or supposed character of an ancient Saxon or Druidical monument, with massive polygonal pillars and intersecting arches, and covered by a solid dome-shaped block, serving as the immediate pedestal on which the figure will be placed. This last, which is now in course of being executed in bronze, by the sculptor Joseph Ernest von Bandel, will be 42 feet high, or including the sword which the warrior holds raised in his right hand, about twenty feet more; and as the height of the pedestal, measured from the ground to the feet of the statue, is 96

feet, the entire height of the monument will be not less than 140 feet, not reckoning to its extreme point; therefore the work itself will altogether exceed in size that at Arona above mentioned. Considered merely by itself, the height alone is nothing very extraordinary, since it does not very much exceed that of the Duke of York's Column, and will be less than that of the Nelson one and its statue in Trafalgar-square; but when we compare this German monument with those in respect to bulk, the difference becomes immense, for the shaft of either of those columns would not be disproportionately too tall for a spear in the hand of Bandel's Arminius.

The project of this national monument is said to have been first started by Bandel himself; and a committee was formed, and a subscription entered into at the beginning of 1838, on the 9th of July in which year was laid the first stone of the pedestal or architectural portion of this gigantic work.

**THE STATE OF THE ARTS AT BERLIN.**—Some years ago the city of Munich held without dispute the first rank with respect to the Arts; but since Frederick William IV. has ascended the throne of Prussia, a noble emulation has been established between that king and his brother-in-law. The Prussian monarch undoubtedly intends to place Berlin in the same position as Weimar formerly held, that of being the intellectual centre of entire Germany. Not only does he assemble around him the most celebrated learned men, the most clever artists, but he furnishes them with the means and opportunities of bringing themselves forward. Thus a total change has taken place in the capital city of Prussia since the commencement of the reign of the present king; everywhere we see new and magnificent buildings, monuments are lavishly erected in the city, and the uncultivated and barren environs are now transformed into noble parks and gardens. In contemplating the projected improvements—a canal, which will alone cost several millions, another museum, a new church, a new library—we are almost tempted to doubt the possibility of these projects being carried into effect; but so many enterprises, so rapidly completed, lead us to believe that the king will never shrink from any sacrifice to realise these noble designs. We have, during some years, assisted in the foundation of a new gallery for pictures: its site is behind the old museum, and it is already in a very advanced state; it will contain magnificent apartments, but the exterior is somewhat deficient. The front is concealed by a kind of wharf, where vessels are loaded and unloaded. The opposite side is to be joined to the old museum by an arched gallery, which will at once disfigure both buildings. In all probability the decorations of the new museum will be confided to Cornelius, who, unfortunately, has been prevented working, during his residence at Berlin, by an obstinate affection of the eyes. He has, therefore, contented himself with assisting young artists by his counsels, and superintending the progress of his pupil, Hermann, who has been appointed to ornament the old museum.

The new gallery will not long remain empty, as the collections of works of Art are considerably increasing. Professor Waagen made a stay of 14 months in Italy to collect some pictures, which have recently arrived at Berlin. Among these paintings we notice a portrait of the Admiral Maura, bearing date 1557, and two little subjects by Titian; an allegorical picture by Giorgione, representing 'War and Peace,' and a complete series of large subjects by Paul Veronese. These last pictures decorated the banquetting-hall of the Exchange which the Germans formerly possessed at Venice. The four principal are—'Jupiter giving to Germany the Empire of the World;' 'Time the Conqueror of Idolatry, confirming the Triumph of Religion;' 'Mars and Minerva considered as symbolical of the Bravery and Warlike Spirit of the Germans;' 'Apollo and Juno honouring the Fine Arts of Germany.' We are rejoiced to see in a German collection, pictures which possess an importance and value peculiar to Germany.

By Tintoretto we have two religious subjects, and a picture which rivalled those of Veronese to add to the beauty of the banquetting-hall—'Diana surrounded by the Hours commencing her course in the Heavens.' M. Waagen has succeeded in accomplishing the safe removal, on new canvasses, of six frescoes, painted by Bernardino Luini in the years 1521 and 1522, in the convent of Santa Corona, at Milan. A picture by Sebastian

del Piombo also merits particular notice. It had been ordered by a cardinal of the Neapolitan family of the Princes of Gesso, Dukes of Cellimare. It represents the dead Christ, Joseph of Arimathea, and the Magdalen; the figures are half length, of colossal size, and appear to have been executed from a design of Michael Angelo.

M. Waagen has also brought over several Spanish pictures: a portrait of the Cardinal Prince Ferdinand, brother of Philip IV., by Velasquez; a portrait of a female, and a Magdalen, by Murillo. This work is in the last manner of the master, and brings to our memory the time when he was inspired by the works of Guido Reni.

The collection of M. Waagen is also rich in sculpture. Venice, which for so long a time kept up a close and frequent intercourse with the East, has furnished some remarkable specimens belonging to the Greek school; among others, a 'Scene of Bacchanalian Inspiration,' a bas-relief serving as a supporter to a tripod. Also the 'Victory,' a celebrated statue in bronze gilded, four feet high, and, as the inscription indicates, of about the time of Marcus Aurelius. These antiques, notwithstanding their merits, are inferior to a group by Antonio Begarrelli, of Modena—'Christ on the Cross surrounded by Angels.' It is well known that this sculptor had a great ascendancy over the mind of Correggio; and indeed the statues now under notice possess that delicacy of form, that graceful suavity, which distinguish the works of the Modenese painter.

An accident prevents a proper appreciation of all the riches acquired by the travels of M. Waagen. A vessel bearing a great part of these treasures narrowly escaped shipwreck, and will not arrive for some time at Berlin.

The museum has just been enriched with the cabinet of the celebrated architect Kemppens, which contained pictures from the German, Italian, and Flemish schools. Another journey is in contemplation, to be undertaken by a clever artist, for the purpose of increasing these treasures, and of making the gallery at Berlin one of the most considerable in Europe.

In the meantime Frederick William does not neglect the living artists; he has commanded the Professor Begas, the best colourist in Berlin, to complete a set of portraits of the most celebrated characters of Prussia. It is not yet known where they will be placed, but it is thought that the King has contemplated the plan of a Walhalla, destined to immortalize the heroes, the learned men, and the artists of Prussia.

The recent exhibition of the pictures of Belgian painters has divided the artists of Berlin into two classes—one party loudly praising Bilfoe and Gallait, the other refusing them any kind of merit. But even the dissatisfied agree that, although the Belgian masters fail in grandeur, they are remarkable for the finish of their execution. Gallait seems to take Paul Delaroche for his model, and his picture of the 'Abdication of Charles V.' has not that severity so necessary to a grand historical composition. These pictures are removed from Berlin to Munich, whence they are to be sent to Vienna. The Belgian school anticipated that this would be a triumphal march; but, if it has gained many partisans, on the other hand it has met with many opponents. In general, there is considerable movement beyond the Rhine. The school of Düsseldorf is attacked by the Belgian masters, joined by some young painters from the north of Germany; Munich is at war with Berlin, particularly since Cornelius has established himself in the capital of Prussia. The Academy of Painting at Frankfurt-on-the-Maine has been a prey to an intestine war respecting a picture of Lessing. This city formerly possessed three historical pictures of this master; but, as soon as a proposition was made to purchase a fourth, a violent opposition arose, at the head of which was the director, Philip Veit. The subject of this picture was taken from the history of John Hus, and gave great offence to the Catholics. After many long debates it has been determined to purchase this work, consequently M. Veit has deemed it right to send in his resignation. It is said that he has united himself with M. Steidle, and that the two intend forming a new school, which, in rivalry with the academy, will labour to propagate the ideas of Overbeck. The artists of Munich and Middle Germany will become partisans of Veit, those of Berlin and Southern Germany will league them-

selves with the Academy of Frankfort; and these dissensions are so much more serious as they are inimical to religion.

FRANCE.—M. L'Ami de Nozan, who for several years has devoted his time at Toulouse to painting on glass, has just completed the windows of the choir of the cathedral of Agen. The legendary style adopted for each window brings to remembrance the principal circumstances in the lives of the several saints who have been the patrons of this church, and harmonises perfectly with this part of the architecture of the cathedral (the tenth century). It is a source of regret that the inadequacy of the funds appropriated will not permit the undertaking of the windows of the nave, as the *ensemble* of this ancient cathedral, the restoration of which has been performed with so much science and taste by M. Bourières the architect, would thus be complete. The municipal council of the city of Paris has just voted the funds necessary for the execution of the pediment of Saint Vincent de Paule, and of six large figures destined for the decoration of the façade of this church. The figures of the pediment, fourteen in number, will be like those of the Parthenon. This important work is confided to M. Nanteuil: the artists to be engaged for the statues are not yet appointed. All the windows of this monument are in course of execution.

The Council of the Royal Academy at Antwerp has decided on the restoration of the pictures of its rich museum; and the administration of the town has strongly approved this decision. The care of this important undertaking has been confided to M. Paul Kiewertz, who is to commence his delicate work by lining two pictures of Vandyke.

In the church of the Sablon at Brussels, the tumular stone has just been placed, consecrated to the great lyric poet, J. B. Rousseau, who died at the village of La Genète, two leagues from Hal. It bears this inscription:—"Here were deposited, on the 19th of December, 1842, by command of his Majesty Leopold I., King of the Belgians, the mortal remains of the poet J. B. Rousseau; born at Paris the 6th of April, 1670; died in exile at Brussels on the 17th of March, 1741."

A monument has just been erected in the church of the Invalides, to the memory of the illustrious Marshal Moncey, the deceased governor. This monument, placed upon the pillar the last but one upon the left on entering into the church, and by the side of that of Marshal Jourdan, is executed entirely in white marble.

There has been just discovered at the foot of Saint Germain des Prés, a small monument which reflects great honour on our ornamental artists; it is an admirable niche enriched with Gothic sculpture of the best taste. In this niche the statue of the 'Virgin and Child' has been placed. This charming little monument is protected by an elegant grating.

*Antiquities.*—A very fine mosaic pavement having been discovered in the neighbourhood of Constantine, on the left bank of the Rhummel, in June 1842, a drawing of it was made by Captain Delamare, of the artillery service, and member of the Scientific Commission in Algeria, and transmitted to the French Government. In consequence of this, M. Delamare has received instructions to undertake the removal of the mosaic, for the purpose of its being sent over to Paris, and placed either in the museum there, or that of Versailles. Notwithstanding the very great difficulty attending it, the first operation, that of extracting the pavement from the ground, has been successfully accomplished, according to a process recommended by M. Lebas, the architect, and member of the French Institute; wherefore there is every reason to hope that its ultimate removal and transport to Paris will be effected with perfect safety.

The entire dimensions of this mosaic are 7·14 metres by 8·36, or rather more than 23 by 26 feet English; and the principal compartment or "picture" itself is about 6½ by 9½ feet. The subject of this last is 'Neptune and Amphitrite,' two figures of the size of life, which are seen directly in front, standing in a car, drawn by four sea-horses. These are attended by two winged boys, or genii, who support a scroll-like drapery over their heads. The lower part of the picture is filled up with marine genii, some of them sailing in barks, others riding on fish and sea-monsters. The whole is of admirable execution and in excellent preservation, except

that the *tesserae* forming Amphitrite's bracelets, and some other ornaments of her dress, have been picked out, whence, it is to be presumed, that they were either of gold or precious stones.

NICOLAS POUSSIN.—Much has been written respecting Poussin, and for a long time all terms of admiration have been exhausted to express all the qualities of his talent. That which distinguishes this artist among the great painters—the noble and delicate selection of his subjects, the beautiful arrangements of his compositions, the correctness of his drawing, the elevation of his style, the justice and depth of his expression—in fact, that knowledge of costume, that fertility of invention, that richness of accessory, and, above all, that happy union of reason and taste, of philosophy and art—all these gifts of nature and study, which form for Poussin a particular character and an original physiognomy, have been recognised and celebrated, and, what is of still greater value, have been appreciated and felt by those numerous generations of artists who have formed their own styles from his works, and who have felt themselves inspired by his chefs-d'œuvres.

There is no artist whose works have been more frequently engraved, which is equivalent to saying that no artist has been more praised than Poussin, if it be true that the engraving from a picture which preserves it for every age, and reproduces it in all hands, be the best eulogium that can be paid. In this manner has the art of engraving rendered to Poussin what he merited, and the painter of the 'Testament d'Eudamidas' still lives, and will eternally live, in so many engravings of his work, which have spread its fame everywhere, even when the picture itself shall be lost.

After so much homage as the pen and the graver—those two grand organs of public opinion—have paid to the genius of Poussin, it would be superfluous to recommence those praises rendered by every one; and certainly it is not desirable to laud, before artists, a painter with whose works they are so well acquainted. But there is in the life of Poussin, and in the history of his talent, features which require some thought—examples which may be useful; and it is, besides, so fine a thing in this life, in which the man and the artist blend so well—in a conviction so strong—in a firmness so calm, and in a dignity so modest, that there is no picture, even of Poussin, which can offer so noble a spectacle. In the history of Art, among the ancients and the moderns, we find the names of many artists who were obliged to contend with obstacles in every shape; there is no one who has had to suffer more than Poussin from the rigours of fortune and from the injustice of men, or who has more completely triumphed by the firmness of his character and the power of his talent. Born in a little provincial town, of poor but honest parents, who were desirous that he should study Latin for the purpose of becoming a lawyer, he showed himself an artist by scribbling drawings in his school-books. But it was not sufficient that, thus decidedly showing the bent of his genius, his parents should relinquish their favourite project; it was necessary to find him a master; and he under whose care fate had placed him was only able to teach him that which is at all times the most easy to learn—the mechanical part of his art. With this single resource, but also guided by the instinct of his talent, Poussin, scarcely 18 years of age, determined, secretly, to quit his country and his family, to seek, in Paris, that which he needed—good instruction, and also, what is the dream of every mind at that age—glory. On his road, without friends, without money, this great man painted humble interiors to procure for himself his daily bread, and, perhaps, in some nook in Normandy there may exist more than one of these paintings, by that hand which has produced the 'Seven Sacraments.'

On his arrival at Paris, Poussin did not find there the masters he desired, and consequently was too happy to quit their school almost as soon as he had entered it, for they could only show him their defects, and he was already too advanced to satisfy himself with their best qualities. A young gentleman of Poitou, strongly interested in him, on seeing him travel for work as others hasten after fortune, prevailed on him to accompany him to his country seat, promising him he should paint his château. But the mother of this gentleman required of Poussin nothing but domestic services instead of historical paintings, therefore, under the

necessity of leaving this establishment, he was obliged to have recourse to his pencil to defray the necessary expenses of his journey on foot to Paris. It is said that at this period, and during this long and painful journey, he painted bacchanals in the castle of Chiverny, and religious pictures for the monks of Blois, productions of youth and of adversity, still more valuable from this double title; but, unhappily, these have been lost for many years, whereas they ought to have been preserved as examples to modest talent, which still doubts or despairs of ever rising above mediocrity.

It is said also, but without sufficient proof, that there existed at the castle of Clisson some landscapes by Poussin, which he must have executed at that period, when he was walking through the provinces on his way to Paris. The events, as well as the works of this part of the life of Poussin, are covered with an impenetrable obscurity; and all that is known with certainty is, that on his arrival in Paris, wearied and overcome by fatigue and anxiety, without the necessities of life, he became dangerously ill, and did not recover his health until after having breathed for some time his native air under his paternal roof. Returning once again to Paris, with the same intention of perfecting himself in the art of painting, he was soon convinced that the means for this purpose then failed him, and that Italy alone could furnish him with masters or models. He then set out for Italy, and went as far as Florence; but he could go no further, undoubtedly because that resource which had availed him up to this time—that of selling in the various towns through which he passed little pictures in water-colours—was no longer of any use to him in that country. A second time he set out for Italy, but again he could get no further than Lyons, where his fortune was put to a new trial. An illness, which prevented the employment of his talent, exhausted his slender means. Scarcely convalescent, and reduced to absolute want, he met with a merchant who advanced him a small sum to enable him to return to Paris, and who consented to be paid in pictures; in this way he recovered his liberty and returned to Paris.

He was nearly thirty years of age, and had lost eleven in combating with all the miseries of life, when an unexpected circumstance at once brought his talent forward. In 1625 the Jesuits celebrated the canonization of Ignatius Loyola and that of François Xavier, and they desired on that occasion to exhibit, in a series of pictures, the principal miracles of their patron saints. A competition, to which all the celebrated Parisian painters were called, was proposed, and Poussin produced six grand compositions in water-colours executed in as many days; thanks to the facility which he had acquired in painting by this method. These pictures, in which elegance of design was joined with nobleness of thought and grandeur of conception, in spite of the defects of so rapid an execution, excited as much admiration as surprise. From that period Poussin became celebrated in Paris, and consequently he had many rivals—many who were jealous and envious, without having yet secured to himself a friend. This is not, however, quite true. A celebrated foreigner being then in Paris, the poet Marini, was so struck with the talent displayed in these compositions of Poussin, that he evinced towards him much kindness, admitted him to an intimacy, and gave him apartments in his house; this was, then, the first advantage that Poussin derived from fortune and from himself. Marini was an imaginative and a learned man, very familiar with the ancients, and full of wit and brilliancy in conversation; he inspired Poussin with a taste for poetry, initiated him in the study of mythology, and prevailed on him to do, under his inspection, the drawings which were to grace the edition of Marini's poem, "Adonis," at the same time when he was reading to him the Greek and Italian poets in an unprepared translation.

It was during his residence with Marini, who happily threw more taste in his readings than in his poems, that Poussin completed, at an age when everything is turned to profit, his literary education, and that he conceived for antiquity, with a poetical eye, that penchant which afterwards was a distinguishing feature of his talent. This artist, who was indebted to none of the painters of his own country, received then ideas, instruction, and inspirations of much more value than bad lessons in painting; and Marini, too much lauded in those times, but now scarcely read, con-

tributed more than any one to form a great painter; this is, perhaps, the only merit which will descend to him with posterity, and for which France will have the greatest cause to rejoice. In the meantime Poussin had not renounced his project of travelling to Italy, and his conversations with Marini only served to strengthen his resolution. When this poet, recalled to Rome by the exaltation of Urbino VIII. to the papal see, proposed to Poussin to be his companion, this must have been a great temptation. But Poussin was always too much the slave of his duty to remain master of his own destiny. He had received from the corporation of the Goldsmiths an order for a picture, 'The Death of the Virgin'; consequently he suffered his protector to depart without him, and did not commence his journey to Rome until after the completion of this picture.

Poussin was thirty years of age when he attained the summit of all his wishes, in short, when he arrived at Rome; but even then all his trials were not terminated. It is generally imagined that from the time of his taking up his residence in Rome fortune ceased to persecute him; this is, however, an error caused by an entire ignorance of the manner in which he employed the first years of his abode in this metropolis of the Arts; where the revolutions of taste have made scarcely a less number of illustrious victims than the political changes; where genius, only a century before, was adored in Raffaele, but also persecuted in Domenichino. At the outset, the friend, the guide, the protector upon whom Poussin had relied, on his arrival at Rome, was quite unmindful of his promises. Marini, who had not met with, from Pope Urbino VIII. those sentiments he expected to find from the friend of his childhood, Barberini, and who obtained at Rome, as an expiation of his political offences, simply the permission of performing a public penance by publishing his poem of 'The Massacre of the Innocents,'—Marini, discouraged, old and infirm, had retired to Naples, where he died the following year. Before his departure he wished to render a last service to his friend by presenting him to the Cardinal Barberini, nephew of the Pope, and history has preserved the expressions employed by him to recommend Poussin to this Prince of the Church—"You will see a young man possessing the ardour of a devil." This expresses the promptitude, it may almost be said the impetuosity of execution that Poussin owed to his early labours, and which, after having been for him a necessity and a resource in his days of adversity, continued in his prosperity a custom and a peculiar property of his talent. The expression of Marini does not less happily illustrate the character of an artist whom we are accustomed to regard, at the distance of two centuries, through the imposing calm of his compositions, so grave, no noble, so regular, but who, then at variance with fortune, was obliged to employ so much activity, so much energy, and so much courage to place him in the high position he afterwards held.

These resources of his will and of his talent were not less necessary to him in Rome than they had been in Paris. To the retirement of Marini, his sole patron, soon succeeded the departure of his only protector, Cardinal Barberini, for his legation to the court of Spain. Thus alone, without a name, without friends in this great city, which became, for him, a vast solitude, Poussin, for a long period, had to struggle with obstacles of every description; and here it must be regretted that nothing is known of the particularities of that part of his life, so severe so laborious, and made up of privations and studies.

Poussin established himself in Rome to study the antique; and this city, which was then, and always will be, in spite of time and of the animosities of mankind, the most magnificent of all the museums, could scarcely suffice for that thirst after instruction which was with him the first object of all his desires. The credit of Barberini only gave him the *entrée* to one house, which was a museum. Chance, which has sometimes its instinct, and misfortune, which has sometimes also its providence, had associated him with the Sculptor François Duquenois, poor and obscure as himself. These two men, drawn together by adversity as well as sympathy, united in one common lot their studies and their labours, their privations and their hopes; and in this union, in which Art had its share with affection, the painter became almost a sculptor, after the example of his friend, at the

School of the Antique. It is, indeed, at this period, that Poussin copied 'La Noce Aldobrandine,' which constituted for him the effect of an ancient bas-relief; and at this time also he copied a picture by Titian, found at the Villa Ludovisi. About this period, also, he executed, in small size, an immense number of copies of antique statues, such as the 'Cleopatra of the Vatican,' now in the possession of M. Duchêne; and this is without doubt the manner in which he formed that system of composition which leans so much to the order of the bas-relief; and from this no doubt arises the power which Poussin possesses over almost every other painter of giving the best idea of antique painting. It is well known that, during his long residence of 40 years in Rome, Poussin never passed a single day without making some study from the monuments in that city. Architecture and statuary, antique ruins and modern edifices, the town and the country, places and men, Art and nature, and everything in this admirable city which gives rise to thought and writing, reflection and design, the artist and the philosopher, was for him constantly an object of study and enjoyment. He continued even to an advanced age to take pleasure in deriving information from this great school; and a contemporary, on this subject, thus writes: "I have frequently," says Vigneul de Marville, who had known him during the last years of his life, "I have often admired his ardent passion for his Art, although very old. I constantly saw him in the midst of the ruins of ancient Rome, in the country or on the shores of the Tiber, sketching a landscape which pleased him; and I have frequently met him bringing home stones and flowers to copy from nature. I one day asked him how he had arrived at that degree of perfection which had assigned him so high a rank among the painters of Italy. He replied, 'By neglecting nothing.'"

#### ART IN THE PROVINCES.

ROYAL HIBERNIAN ACADEMY, SEVENTEENTH EXHIBITION.—In noticing the exhibition of this institution for the present year, we have a pleasing task to discharge. If there be, as in every such exhibition there must be, some works deserving censure, we are happy to say their number here is small; while, on the other hand, those deserving warm approval are so numerous as to afford a most cheering proof of the progress which the Fine Arts are making in the sister kingdom. This is by far the best exhibition the academy has seen for many years—the best, perhaps, since its foundation. There are few very striking pictures; but what is the strongest proof of general improvement in the Arts, the works exhibited are almost uniformly good. And what renders this a higher praise is, that the collection is far more numerous than in any preceding year. We remember three or four years ago, the number of exhibitions hardly half filled the walls of the ordinary exhibition rooms; but this year, not only are two rooms completely filled, but the walls of the gallery of the room ordinarily appropriated to sculpture are also covered—indeed it has been found necessary to fill every available space, in some instances even almost to crowding. This very great and very sensible advance is chiefly attributed to the patriotic exertions of the Royal Irish Art-Union. By ensuring a certain market for almost every work of merit, it has at length freed Irish artists from the necessity of leaving their country from want of support, and their country from the disgrace of being unable to support them. Besides the generally improved character of the exhibition, there are other circumstances which distinguish this from previous exhibitions. The most obvious to a visitor of the Royal Academy, and our other London exhibitions is, the appearance of many old acquaintances—we mean among the artists, not the pictures—and these not second-rate, the undervalued or neglected, who might be supposed to seek in a provincial exhibition a prominence which they could not hope for among the mass of genius which the wealth of the great metropolis attracts, but some of the foremost and most esteemed, whose works are even classed among the very first rank. Thus we find pictures from Creswick, McClise, Uwins, Rothwell, David Roberts, and others—*quos periculis longum*. We regret we cannot say that the collection of statuary has made equal advances. It has improved from former years; but not commensurately with the sister Art. The number of works exhibited is small, and, with four or five exceptions, commonplace. The exceptions, however, we must say are very "bright exceptions," and their merits go far in counterbalancing their fewness. 'A Girl Reading,' by P. M'Dowall, a very striking and exquisitely graceful and classical figure; and a small group, 'The Young Suppliant,' by Kirk, deserve particular commendation. It is not very long since the names of both these gentlemen were before the public in a discussion not very creditable to the liberality of certain persons at this side of the channel; and we may say these specimens of their genius afford a most striking answer to

their assailants. There is a change in the system of admitting visitors, which we notice as it has been found to work well, and may afford a useful suggestion to other institutions. Heretofore it had been usual to give only tickets for single admissions. This year the practice of also issuing season tickets, at an advanced price, admitting the visitor any number of times to the exhibition, has been adopted, we believe, at the suggestion of the indefatigable secretary of the Art-Union, Stewart Blacker, Esq. There is no one visiting a large collection of pictures, who, in coming it, has not found that he overlooked or neglected some works which particularly struck others. This invariably suggests a wish to revisit the exhibition; and yet every one feels reluctant to repeat the same tax for admission six or seven times over. Thoroughly to examine a large collection at one visit is, if not impossible, at least an exercise of patience which renders it a task instead of a pleasure. The scale of charges is, for a single ticket a shilling; for a season ticket, half-a-crown. Already the number of season tickets exceeds some thousands. One other circumstance we should notice as the strongest proof of the advance of taste in the Fine Arts in Ireland. A few years ago literally no pictures found purchasers at this exhibition. The consequence was nothing but portrait painting was paid for in Ireland. The Art-Union at length supplied a fund, to which a higher walk of Art might look for some support; still, until recently, there was scarcely any sale except to the Art-Union Society itself. This year the number of private purchasers has very considerably increased. We hail this as a most cheering sign; and trust that the good citizens of Dublin will not remain longer under the reproach, which we fear was too just, that in proportion to their wealth they possessed fewer private collections of merit than any city in England.

No. 1. 'Eatan,' JOHN PATRIDGE.

"Thus, while he spake, each passion dimm'd his face,  
Thrice chang'd with pale ire, envy, and despair,  
Which marr'd his borrow'd visage, and betray'd  
Him counterfeit."—*Paradise Lost*.

The picture is a single figure of very large size. Taking it merely as the picture of a man standing, it is an admirable painting, the drawing and foreshortening unexceptionable, and the colouring very good. But we think the conception not adequate to the subject, and, therefore, does not express on paper what the poet describes in the artist's motto. To say, however, that the artist has not fully succeeded in a work of such high pretension and exceeding difficulty is, perhaps, no censure.

No. 11. 'Boys Robbing an Apple-stall,' CATTERSON SMITH. A perfect gem, which, we regret much to say, has been placed in an obscure part of the room. The tranquil face of the slumbering old dame contrasts admirably with the roguish look of the arching, who is peeping under her eyelids in order that he may immediately give the alarm to his companion, who is cautiously abstracting the apples, should she show symptoms of waking.

No. 12. 'The Stolen Child Recovered,' Sir W. ALLAN, R.A. This is not a pleasing picture; the colouring is hard, and the disposition of the figures ungraceful.

No. 23. 'A Roman Gotherd, with a view of the Campagna,' PERRY WILLIAMS. A pretty work, but, perhaps, too elaborately finished.

No. 29. 'Flower Girl, Piazza Nuova,' RICHARD ROTHWELL. A very pleasing picture; the eyes are beautifully painted.

No. 30. 'The Battle of Clontarf, fought in the year 1014,' PAUL WILKINSON. Some of the figures are very well drawn, but the grouping, we think, is highly unnatural. It is a copy from one of the artist's own pictures, and is an excellent specimen of his peculiar and beautiful style of colouring. It is free from an objection sometimes made to his works, the colouring of the cheeks having no hectic or consumptive appearance.

No. 36. 'Portrait of the late Right Honourable Sir Michael O'Loghlen, Bart., Master of the Rolls in Ireland,' G. F. MULVANY, R.H.A. A very large portrait of this lamented judge, very well painted.

No. 38. 'Sir John Falstaff, Mrs. Quickly, and Pistol,' THOMAS BRIDGORD, A. We can report nothing favourable of this work.

No. 41. 'Aladdin forced by the Magician into the Cave for the Wonderful Lamp,' WILLIAM H. COLLIER, R.H.A. Very extravagant; the magician's face, however, is good, but a palpable copy from one of Meadows's illustrations of *The Tempest*.

No. 49. 'The Catty Pipe,' CATTERSON SMITH. An admirable performance. It is simply a half figure of a son of 'the Land of Cakes' lighting his pipe with a burning turf; but there is so much character in the expression of his face, it is so natural, without the least verging upon caricature, that the picture deserves to be classed among the very best in the room.

No. 58. 'Greenwood Trees,' THOMAS CRAWFORD, A.R.A. A beautiful painting, but the subject uninteresting.

No. 59. 'An Old Covenanter studying his Bible with his clenched drawn sword,' G. LANGE. Good—the face of the stern old warrior is highly expressive.

No. 65. 'Portrait of the Right Honourable Lord Plunket, Ex-Chancellor of Ireland,' painted for the Honourable Society of King's Inns, M. CASSAN, P.R.H.A. A full-size portrait, taken towards the decline of life: a good likeness.

No. 70. 'La Jeune Artiste,' TREVOR T. FOWLER. Pleasingly designed, but the colouring bad.

No. 86. 'Leaving the Ball,' JOHN CALCOTT HORSELEY.

"Where the poor houseless shiv'ring female lies." A commonplace subject enough, but very well treated. The contrast between the revellers leaving the scene of gaiety and the poor houseless shivering female with the hungry infant is most forcible. The figure of the latter is very well done, and most painfully pathetic.

No. 92. 'Maria,' T. UWINS, R.A. Very commonplace; if it had not the artist's name, it would be passed unnoticed.

No. 106. 'The Death of Gelert,' THOMAS CRANE. The artist has not succeeded in giving the face of Llewellyn an expression of despair or remorse; to us it appears more like that of a certain stage of intoxication. The colouring, too, is muddy and bad.

No. 112. 'Portrait of her Most Gracious Majesty the Queen,' JOHN PARTRIDGE. A good picture of her Britannic Majesty. It is by the same artist as No. 1, and placed directly opposite to it in the room.

No. 121. 'Portrait of the Honourable Justice Torrens,' J. G. MIDDLETON. Not a striking likeness.

No. 138. 'Statues of the Vocal Memnon at Thebes—sunrise,' DAVID ROBERTS, R.A. An exquisite painting; a subject which it was difficult to treat without giving it the monotony of a mere statuary drawing. The picture is already known, it having been exhibited in London.

No. 142. 'Lear and Cordelia in Prison,' J. UWINS, R.A. The artist has in this painting given to the face of Lear the expression of an experimental philosopher, rather than an anxious father. The picture is well painted, and if it were entitled an 'ancient physician trying if there is life in a drowned girl,' we should say the subject had been well handled.

No. 159. 'The Wolf Tragedy from Red Riding Hood,' W. H. COLLIER, R.H.A. A pretty picture. The fault of this artist is too much varnish. Everything is satin. This work is an improvement in this respect.

No. 165. 'A Serenade,' D. MACLISE, R.A. Exquisitely drawn, but we cannot reconcile our eye to the glaring colouring in which the artist has dressed his work. The attitude of the serenader is also a little extravagant.

No. 175. 'Interior of a Cottage—Unwelcome News,' NICHOLAS M. CONDY. This is a pleasing little picture. The minuteness and accuracy with which it is finished is perfectly surprising for a painting in oils. It is as careful as a miniature.

No. 177. 'Hermia and Helena,' F. H. HENSHAW. We have seldom seen a work which gave us so much pleasure. The colouring of the face of the inner figure is exquisite, and the affectionate expression of each face beautifully conceived.

No. 181. 'The Virgin and Infant Christ,' W. H. COLLIER, R.H.A. In our opinion Mr. Collier has the most comical conception of the Virgin Mary. She surely did not wear a fashionable purple dress, with tight top sleeves and full elbows, and a low front; neither did she ponder with the simpering expression of a young lady just introduced to a strange partner; to be in keeping, the infant Christ ought to have been painted with a Scotch cap and tassel, bare legs, and red shoes buckled over the instep.

No. 191. 'An impatient Sitter,' J. HAVERTY. This is a pleasing performance; the figure is, perhaps, a little stiff, but in one sitting for a picture, that is natural.

No. 200. 'Leenaune, Killary Harbour, County of Mayo,' GEORGE COLOMB. A good picture, but not equal, we think, to some former works of the same artist.

No. 210. 'Sketch of a Sketching Society—the Critical Moment,' JOHN PARTRIDGE. Even if this picture had not the additional interest of being a collection of portraits, it would, as a mere work of art, hold the very highest rank; the figures are exceedingly well grouped; the faces displaying great interest, but without any tameness.

No. 215. 'Love,' N. J. CROWLEY, R.H.A. The female figures in this picture are remarkably well drawn, especially the foremost figure, the arch expression of whose countenance is exceedingly good; the male figure is perhaps a little extravagant, but altogether the picture is a good one.

No. 246. 'Portrait of Daniel O'Connell, Esq., M.P.,' CHARLES GREY, A. Surely the liberator has an action for libel against the artist; we have seldom seen so absurd a caricature.

No. 298. 'Portrait of Sir Henry Marsh, Bart., M.D.,' FREDERICK W. BURTON, R.H.A. An unmistakable likeness.

No. 328. 'Brendan Mountains, from the Pass of Connor-hill, county of Kerry,' GEORGE PATRICK, R.H.A. A very clever painting, even in its present unfinished state; we have seen few which pleased us more.

No. 375. 'Lord Nigel's Introduction to the Sanctuary of Alastia,' E. H. WHEWSTER. This is a good picture, and very spirited; the figures are well drawn and well grouped, but in the faces of many there is a good deal of caricature. There is nothing so difficult to hit as the line between tameness and extravagance.

No. 402. 'Portrait of the Archdeacon of Emly,' FRED. W. BURTON, R.H.A. An admirable likeness.

No. 424. 'Portraits of the Children of the Rev. William N. Guinness, Ardotton, county of Sligo,' H. B. DAVIS. Unfinished, and not likely to do much credit to the artist when it is finished. The unqualified adulation which the painting of a couple of water-

coloured drawings procured from the good citizens of Dublin for this young man, Mr. Burton, seems to have already satisfied his thirst for fame. He produced scarcely anything worth noticing in the last exhibition of the Hibernian Academy, and nothing in this, except the portrait of Dr. Marsh, which we have already favourably noticed.

No. 434. 'Dolly Varden dressing for the Ball,' JESSY M. JOY. A spirited little picture; full of point and truth in its expression.

No. 471. 'Prometheus,' SIR GEORGE HODSON, Bart., H. Of this picture we have nothing favourable to remark.

No. 476. 'The Firth of Clyde,' WILLIAM M'EWAN. A lively sea piece, very well painted.

No. 481. 'The First Catch, early Morning,' THOMAS F. MARSHALL. The triumphant look of the urchin, who has just captured a fish, contrasts admirably with the melancholy expression of the unsuccessful angler opposite. The picture is pleasingly coloured, and very natural.

No. 507. 'Road Scene,' THOMAS BAKER. Exquisitely painted; Nothing can be more natural than the haze that seems to float over the landscape. The depth and perspective admirable, and the finish perfect. A hyper-critic might, perhaps, think it a little too minute to her

No. 546. 'Teresa Panza directing the Letter to her Husband, Sancho Panza, while Governor of the Island,' T. M. JOY. Very spiritedly drawn. Teresa Panza's expression of face is perfect; but the man writing the letter is commonplace.

No. 572. 'The total Loss of the Intrinsic of Liverpool,' LIEUT. BEECHY, R.N. A very unfinished piece, but showing, we think, a good deal of genius.

No. 590. 'The Irish Peasant's Grave,' JOHN TRACY. This picture has been greatly admired, and, we think, with justice: the effect is, however, much injured by the foremost female figure, which is very spiritless.

No. 592. 'Pleasure and Pain,' ALEXANDER KIRK. Very well imagined; but, perhaps, too much of a caricature. The subject is a rustic infant, on one side of the picture he is squeezing a kitten in great delight; on the other, the kitten has scratched him.

No. 666. 'A Girl Reading,' P. M'DOWELL, A.R.A. The statue from which this exquisite work is taken is so well known, that any comment on it would be needless: it has been purchased by the Art-Union.

No. 666. 'The Young Suppliant,' a group in marble. THOMAS KIRK, R.H.A. This beautiful little group is intended as a companion to the 'Youthful Champion,' a former production of the same artist.

No. 670. 'A Girl at Prayer,' P. M'DOWELL, A.R.A. Perhaps hardly equal to 'A Girl Reading,' but still a beautifully graceful figure.

EXHIBITION OF THE SOCIETY OF IRISH ARTISTS, ROYAL IRISH INSTITUTION, COLLEGE-STREET.—This is the first exhibition of this society. The collection of pictures exhibited is small—being but 132 in number—and of a very miscellaneous character. Some of them, particularly some of the water-colour paintings, have very considerable merit; but some of the landscapes in oil are pitiful daubs—nearly as bad, indeed, as any we have ever yet seen ventured before the public in any exhibition. Among the water-colour pictures deserving the most favourable notice we would mention 'The Dying Comrade,' by Mrs. A. Hayes, and 'Scraping an Acquaintance,' by the same artist. There is a little painting in oil, 'The Forbidden Novel,' the conception of which is very clever, but it wants finish. With the exception of the faulty landscapes, about half a dozen in number, and a portrait or two which we cannot but think are libels on the originals, the remainder of the pictures are—though not of a very high order—yet good, and, considering that the society is in its infancy, and the exhibition is held at the same time that the exhibition of the Hibernian Academy is open, very creditable to the zeal and exertions of the members.

#### REPORT OF THE SPITALFIELDS SCHOOL OF DESIGN.

THIS, the second annual report of the institution, shows a state of continued prosperity. At the period of the last report there were 120 pupils in the school; the increase during the past year amounts to sixty, making the present number 180, under the following classes:—Children of weavers, 66; wood-carvers and cabinet-makers, 40; house and ornamental painters, carpenters, stone-masons, &c. &c., 74: and it appears that the number is limited only by want of accommodation.

It was scarcely to be expected that, in the short time since the school has been established, much practical benefit should as yet have arisen from whatever proficiency the pupils may have attained, or their fitness for pursuing the various departments of ornamental design to which they may purpose to devote themselves. Application has, however, already been made to this establishment, by an eminent manufacturing house at Nottingham, for a designer—an example which will be, undoubtedly, followed by other establishments as the reputation of the school rises.

The school is not yet in possession of premises, as a property, whence much inconvenience has been experienced, having been obliged to remove from place to place, in consequence of a want of a permanent school-room. It has, therefore, been with the committee a desideratum to build a school-house, but for this purpose their funds are not yet sufficient.

Since the last annual meeting, the net proceeds of the ball given at the Opera House, under the immediate patronage of her Majesty, have been ascertained to amount to £1185 7s. 6d., £1000 of which have been invested in Exchequer-bills, in the names of Robert Hanbury, Esq., Mr. J. Casey, Mr. T. F. Gibson, Mr. R. Harrison, and Mr. W. Webb, and will be available as a building fund whenever it is decided to use it for that purpose.

At the close of the year 1842, it was ascertained that the parliamentary grant which had been made for the support of the school was inadequate for the purpose in consequence of the great increase in the number of the pupils. An application was made to the council of the Government School for assistance, which was promptly granted, after an inspection of the school had been made by a committee of the council, who reported favourably of its condition and prospects. Since that period, the committee have exerted themselves to obtain pecuniary assistance from the larger houses in the silk-trade, and have met with cordial support, inasmuch that they have obtained a list of annual subscribers to the amount of £56 lls. This fund, together with an increased parliamentary grant, and the fees from the pupils, will enable the future committee to meet the expenditure, although the cost of instruction is now considerably greater than was anticipated, in consequence of a weekly salary paid to the two assistant masters. It is hoped that these masters will be supplied from the Somerset House School, without charge, as soon as the council have completed some arrangements now pending.

The most important deficiency in the arrangements for the conduct of the school appears to be in the article of books, and this want becomes more pressing in proportion to the advance of the pupils. Undoubtedly great benefit would be derived to the more advanced pupils, if they had the advantage of inspecting on the spot some of the works on ornament, published in this and foreign countries, and if a greater variety could be afforded in the copies from which they draw.

Since the last report the school has been opened for instruction three mornings in the week, from ten till one, for those pupils who are sufficiently advanced to use colour. Five evenings in the week are also devoted to instruction, the pupils being divided into classes, who meet on alternate evenings for the purpose of accommodating a greater number.

Of this institution we have already spoken favourably after a report made to the committee of the Somerset House School of Design. The establishment is judiciously located, and its progress cannot fail to have a beneficial effect upon the productions of its district. In the establishment of such institutions attention is only directed to the amelioration of a department of Art to which the French long ago turned their attention; hence that superiority in design which it is to be hoped will not much longer distinguish French manufactures so widely from our own.

#### PHOTOGRAPHY.—THE DAGUERRE-OTYPE.\*

THE idea of photographic reflection appears to have been first suggested by the darkening of recently precipitated chloride of silver when exposed to the light; and the earliest recorded experiments on the subject are those of Sir H. Davy and Wedgewood, which, in the year 1802, were published in the Journal of the Royal Institution. With these gentlemen the difficulty was to regulate the action of the light, to restrain its active operation after the reflection had been conveyed; but in this they failed, and in a short time abandoned their experiments. The next person who turned his attention to the subject was M. Niepce, about the year

\* "Photographic Manipulation;" Edward Palmer, Newgate-street.

1814, and he, during a period of ten years, prosecuted his experiments alone, after which he became acquainted with M. Daguerre, who was pursuing the same end. These two gentlemen continued their researches together, and in the year 1839 announced the Daguerreotype, but the process was kept secret until the month of July in the same year, when the result of their labours was purchased by the French Government.

Photography had also formed a subject of study with Mr. Fox Talbot, who had instituted experiments with the view of rendering paper sensitive to light. This gentleman, in 1839, communicated to the Royal Society the substance of his photographic researches, and shortly afterwards published the process of preparing the paper, as also the method of obtaining photographic drawings of leaves, flowers, feathers, &c. &c. To Mr. Talbot, therefore, is the world indebted for this beautiful process, and also for the calotype, by means of which, with the camera obscura, representations of objects may be obtained with the utmost nicety of outline.

Photography is also indebted to the researches of Sir J. Herschel, who suggested many improvements in known processes. Others, also, who have benefited the science are Fyfe, Hunt, Penton, Donne, Draper, Becquerell, and Redman. Thus, photography, in its simplest form, appears to have been first suggested by Sir H. Davy, and brought to a state of available perfection by Mr. Fox Talbot, whose process was to wash paper over with some preparation of silver, which became dark in proportion to the intensity of the light to which it was exposed. When the resemblance to the object was sufficiently distinct the remainder of the silver preparation was removed, so leaving a permanent drawing.

In the process, as described by Mr. Fox Talbot, the necessary washes for the paper were composed of two drachms of crystallized nitrate of silver, dissolved in six ounces of distilled water, and two and a half drachms of iodide of potassium, dissolved in one pint of distilled water.

The best paper for the purpose is that called blue wove; and each sheet, before being used, should be carefully examined before a strong light, for the purpose of selecting those that are free from spots and uneven texture.

Fasten the paper by its corners to a smooth board with four small pegs of wood, or pins of silver wire, and, with a soft camel's-hair brush, wash it over with the solution of iodide of potassium; and, when the paper is sufficiently wetted, allow the superfluous solution to drain from it, and set it aside until perfectly dry; or, should the paper be immediately wanted, it may be dried at a gentle fire.

The solution of nitrate of silver may be used in the same way, taking care that the wash be even; after which it must be left to dry as before, and when dry it may be removed from the board and immersed, during the space of half a minute, in the solution of iodide of potassium, contained in any shallow vessel sufficiently large to admit the paper, which, when removed from the solution, is washed in distilled water, or boiled water which has been left to cool. This is called iodized paper, and, if properly made, will appear of a light primrose colour, and perfectly even in tint throughout the surface which has been washed over.

The second part of the preparation of the paper, and that which renders it so sensitive to the light, is best performed only a short time before it is to be used. For this purpose two solutions also are necessary:—1st. Two drachms of crystallized nitrate of silver, dissolved in two ounces of distilled water, to which is added, half an ounce of crystallizable acetic acid; 2nd. A small quantity of crystallized gallic acid, dissolved in distilled water. These solutions should be kept in separate stopped phials, and are used in a mixture of equal quantities, being applied to a sheet of the iodized paper, which has been placed upon the board or slate which fits the back of the camera, the focus of which may then be allowed to fall upon the paper. The time necessary for the production of the copy does not exceed two minutes, but this depends upon the state of the atmosphere.

When the paper is removed the image will be scarcely perceptible; but in order to bring it out it must be washed as before, with the gallo-nitrate of silver, or the compound of the two solutions, and finally warmed, when the reflection will be-

come well defined; and when sufficiently distinct it should be removed from the heat, and set, by being dipped into some distilled water. The whole of this part of the process is conducted in a room whence the light is excluded; the only light used being that of a candle, or small lamp, surrounded with a shade of yellow glass, which has been found to prevent any decomposing effect on the paper.

Photogenic paper may be employed in obtaining copies of all small objects either of nature or of Art, if they are or can be made sufficiently flat without injury; and objects best adapted for this purpose are plants, leaves, flowers, ferns, mosses, feathers, wings of insects, prints, drawings, lace, and other similar articles, for which the only apparatus necessary are two pieces of plate glass of the size of the drawing or a little larger.

The Daguerreotype process was patented in England by Mr. Berry in 1839, and entitled "a new and improved method of obtaining the spontaneous reproductions of all the images received in the focus of the camera obscura;" but since the date of this specification it has undergone many and signal improvements, and is yet tending towards amelioration. Daguerreotype pictures are executed on copper-plates which have been prepared with a coating of silver sufficiently thick to admit of being polished. Those used are of the best Sheffield manufacture, and can be obtained with polished surfaces ready for use. The process may be divided into five distinct operations, viz.:

1. Cleaning the silvered plate.
2. Rendering its surface sensitive to light, by exposing it to the vapour of iodine, bromine, or their combinations with chlorine, &c.
3. Exposing the prepared sensitive plate to the focus of either a refracting or reflecting camera.
4. Bringing out the picture by exposing it to the vapour of mercury.
5. Setting the picture, by removing the sensitive surface of the plate which has not been acted upon by the light.

As it is in cleaning the plate a principal object to obtain a surface of silver perfectly pure, it will be understood that everything employed for this purpose should be perfectly free from impurities of every kind. It is also to be observed as a necessary precaution, that the plates should not be prepared in any place where there may exist vapours arising from acids, volatile oils, &c. &c.; in order to illustrate the operation of which it is stated as a fact, that a small quantity of oil of turpentine having been used in a room where some Daguerreotype plates were afterwards polished, it was impossible to procure any good pictures until the vapour had been neutralized. Many methods have been recommended for giving the best polish to plates, for which purpose there are employed cotton wool, calcined tripoli, prepared lamp-black, olive oil, nitric acid diluted with water, a spirit lamp and stand, a pair of pliers, and cotton velvet buff.

The very delicate process of preparing the plate is commenced thus, according to Mr. Palmer's little book:—

*The mode of proceeding is as follows:—*Lay the plate, silver-side upwards, upon a piece of clean white paper, or, what is more convenient and better, on the plate-holder (see list of apparatus), and shake a small quantity of the tripoli over it; a few drops of olive oil should then be applied, and with a knot of the cotton and a light hand proceed to polish the plate by a series of circular movements, equally over its surface, adding more tripoli as required. The time usually expended for producing a good surface on a new plate is about five minutes. If the plate be one that has been used it should be heated over a spirit-lamp for a short time before beginning to polish; when a good surface is obtained take a fresh pledget of wool, and, shaking more tripoli over the plate, gradually wipe off the oil, using a fresh piece of cotton as required: when the whole of the oil is apparently removed the plate ought to be heated over a spirit-lamp to the temperature of about 300 Fahr. for half a minute, &c. &c.

The succeeding operation of iodining is of a nature so delicate that it is best performed in a dark room lighted only by a candle. It may happen that some difficulty will occur with respect to the colour of the plate by candlelight, in which case it is better to prepare the plate in a room with a light so subdued as merely to enable the photographer

to proceed with certainty; as, for instance, in a room having the shutters closed and the door partially open. In order to distinguish the colour of the plate a sheet of white paper is held in such a position that its reflection on the plate will serve as a guide. If the colour be not sufficiently strong it is immediately replaced in the iodine box till the proper tint be obtained. In order to prevent the operation of the light on the surface the plate must be kept in a box whence the light is altogether excluded.

The method of exposing the prepared plate to the focus of a refracting or reflecting camera is thus described in Mr. Palmer's book:—"The mode in which this is effected must, of course, depend upon the construction of the camera, whether it have a lens as originally proposed by Daguerre, or a concave mirror or speculum which is the apparatus patented in this country by Mr. Beard; both kinds have their advantages. The refracting camera as recently improved (see list of apparatus), appears to possess all the capabilities without many of the inconveniences attendant on the manipulation with the reflecting camera, and being withal less expensive, is now the form generally used. The first thing to be attended to before introducing the plate, is to place the camera on some firm support, and opposite to the object wished to be copied, after which the focus should be adjusted with the greatest care till a perfectly clear and distinct image of the object is seen on the piece of ground-glass, which should be placed in exactly the same position as the plate is to occupy, taking especial care that the ground-side of the glass should correspond to the prepared surface of the plate; when the focus is obtained, the light should be shut off by a contrivance for that purpose till the plate is introduced, or the camera may be taken into a dark room and have the plate put into its place, when it can be brought into the light, having, of course, made those obvious arrangements that the object and the camera be placed in precisely the same relative positions they occupied when the focus was adjusted. The camera may then be opened to allow the light to fall on the plate through the lens. The time requisite for it to remain open will depend in a great measure upon the season of the year, time of the day, and the brightness or clearness of the atmosphere. The time usually required with a good achromatic, and well-constructed camera, varies from one to sixty seconds. When the camera has been opened a sufficient time, which can only be determined by observation and experiment, close the front aperture and take it into the dark room, when the picture which is impressed on the sensitive surface of the plate is to be made visible by being exposed to the fumes of mercury."

The next process is that of mecurialising the plate, which is effected by means of heated mercury put into a box constructed for the purpose. If the mercury be sufficiently hot the picture will soon appear; but should it be done too rapidly the nicety of the detail will be lost, and the plate will probably become spotty. The time necessary for this is from five to twenty minutes, hence it will appear that some judgment is necessary. The progress of the plate must be watched, and the effect is improved by the process being carried on rather gradually than otherwise. This is followed by the concluding operation, that of setting the picture.

So liable are daguerreotypes subjects to injury, that they must be kept entirely free from dust and everything touching the surface, as injury would ensue from the slightest friction: the best method of securing them is by means of a piece of cardboard and glass. Subjects thus executed are, from their very nature, liable to injury, to obviate which objection many propositions have been made. The lights and shades are made out by minute globules of mercury, which adhere to the surface in greater or less degree, according to the force and distribution of the lights. The desideratum is, therefore, to attach these particles with a greater degree of firmness inasmuch as to reduce the liability to suffer from contact. Various methods have been proposed for this purpose; but the best is that invented by M. Fizeau, which is beneficial to the plate in two ways, inasmuch as it so perfectly fixes the subject, that the surface may be subjected to slight friction; and also improves the surface, by so far diminishing the metallic reflection as to obviate the necessity of looking at the plate in a particular light.

The medium is chloride of gold and hypo-sulphite of soda, dissolved in distilled water; before using which the plate should be washed, to ensure its being free from dust.

The effect of washing a plate according to this method is to fix it so that it can be placed in a portfolio, and so that it can with difficulty be removed with the finger, to which should it yield easily, it should again be subjected to the operation.

It will sometimes happen that when the plate is being heated it is injured, by a portion of the silver coming off, which is, perhaps, owing to the oxidation of the silver while under the influence of too much heat.

Mr. Palmer's pamphlet on this subject affords ample details to the operator.

#### LIST OF PICTURES, &c., SELECTED BY PRIZE-HOLDERS IN THE ART-UNION OF LONDON, SINCE MAY 25, 1843.

[The Title of Picture, Artist's Name, and Price.]

##### From the Royal Academy.

#### CORRESPONDENCE.

##### CARTOON DRAWINGS.

SIR,—At this time, when anything connected with cartoon-drawing, or the frescoes of the most eminent men of "by-gone days," must be interesting both to the artist and the public, would it not be possible to obtain a private or a public exhibition of those remarkable and splendid drawings done in Italy from both the *frescoes* and *chalk-drawings* of M. Angelo? an interesting notice of which you gave in the ART-UNION some time ago. They were done by Bewick, at the instance of Sir Thomas Lawrence. And although the artist (Mr. Bewick) is now retired from the practice of the Art with an honourable independence, it is for that very reason that it may not be less likely to obtain the benefit of them for a definite period for the study of the artist.

Perhaps, by some suggestion of yours, information from some of your readers might be elicited of *where* this collection is now placed; and if the public could be favoured with the opportunity of seeing, at least, what has been done in the way of "architectural decoration" in the Sistine Chapel—if these sublime emanations of genius can be so named.

Yours, &c.,

AN ARTIST.

[This is a very proper subject to which to direct public attention. We shall no doubt be able to communicate information concerning it in our next.]

##### PRESERVATION OF WATER-COLOUR DRAWINGS.

SIR,—Objections are frequently made to pictures in water colours from their supposed want of durability proceeding from the delicacy of the materials with and upon which they are executed, and some may be deterred from purchasing them on that account. The chief causes of their decay are, I believe, dust, smoke, damp, gaseous exhalations, insects, and exposure to light. I have not tried the following simple plan for their preservation, but beg to suggest it to those who may be the lucky possessors of works by Turner, Bonington, Robson, &c. It should seem that if a piece of glass were placed at the back, and cemented at the edges to that in front of the picture with some resinous material, that all its enemies except light, the last named, would be shut out; and that too might be easily excluded by a spring roller-blind, attached to the top or back of the frame, and concealed within it if desirable.

Yours, &c.,

J. C.

##### THE GENIUS OF TURNER.

SIR,—You have justly expressed your indignation at the heartless criticism and acrimony in allusion to the works of Mr. M'Clae, by a "Graduate of Oxford," in his "Remarks on Modern Painters." But the extraordinary talent, power, and imagination of that gentleman have been less vilified than the most honourable names.

The Graduate acknowledges that he "looks with contempt on Claude, Gaspar Poussin, and Salvator Rosa; also on Cuypp, Berghem, Both, Ruysdael, Hobbins, Teniers, P. Potter, Canaletti, and the various Van something and Back something, more especially and malignantly those who have labelled the sea."

Take what he says of a Berghem in the Dulwich Gallery:—"A most studied piece of chiaroscuro. Here we have the light isolated with a vengeance! Looking at it from the opposite side of the room, we fancy it must be the representation of some experiment with the oxy-hydrogen microscope; and it is with no small astonishment that we find, on closer approach, that all the radiance proceeds from a cow's head!—If cattle heads are to be thus phosphorescent, we shall be able to do without the sun altogether."

Of Claude he writes:—"Whose pictures afford remarkable instances of childishness and incompetence; the impotent struggle of a tyro to express what he finds himself incapable of expressing. And again—"Look at the round things about the sun in the brick

Claude in the National Gallery: they are a good deal more like half-crowns than clouds." Of Claude, Gaspar Poussin, and Salvator together, he says:—"Those artists worked entirely on conventional principles, not representing what they saw, but what they thought would make a handsome picture."

"Let us pass to Turner, his skies are blazing with sunbeams." We are informed that the old masters "wasted their lives in jugglery: false in aerial perspective, false in colour, false in space, false in detail."

In *chiaroscuro*, Raffaele's transfiguration is *totally wrong*."

"But glance at any one of the works of Turner."

"Exemplary Canaletti! A shameless assessor of whatever was most convenient to him, trusting to the inaccuracy of observation of the public to secure him from detection. And he has not reckoned without his host."

"Let us look to Turner! we are in Venice now."

"Vandevelde's eye and feelings were too blunt to suffer much pain from his wilful labelling of nature: he ought not to have reckoned so boldly upon general blindness. Vandevelde and Backhuyzen have no power, no redeeming quality of mind: their works are neither reflective, nor eclectic, nor imitative: they have neither tone, nor execution, nor colour, nor composition, nor any artistic merit to commend them." This is an overwhelming sea indeed. "But let us refresh ourselves by looking at Turner."

Thus, Mr. Editor, the "Graduate" has (with much beautiful writing) exercised his skill to overcome our prejudices and false taste, and to dissipate the ignorance in which we remain. He has endeavoured to settle the question, "What is truth?" but it undergoes as many constructions as there are pens that have undertaken to answer it. And we are told that "Turner is above all criticism, beyond all animadversion, and beyond all praise. His works are not to be received as in any way subjects or matters of opinion; but of faith."

It cannot be denied that Turner is a wonderful man: his tenacity of memory, depth of judgment, and brilliancy of effect, produced by opposition of colour, is surpassing. He was great in his youth, and the greatest painter that ever lived in his manhood. But in the present day he is not understood, and therefore not appreciated. Nature is not always in the same key, but Turner takes the highest; what certainly we have seen, or what may be seen, as Sir Thomas Lawrence said, "once in a man's life." If Turner is wholly right now, he *has been* wrong: however, no doubt his works will assuredly and proudly maintain a high standing while Art exists: but the author cannot overturn the world of one opinion respecting names "on which he looks with contempt." Rash and uprooting ridicule, suiting in any way, is highly culpable. Artists may be fairly reproved for what is wrong; but it must not be done with rudeness and insolence. The power of the press would be to its honour, if a constant attention to the encouragement and prosperity of Art was regarded. Those who command should commend; and the way to make people better is to make the best of them. The critic may have right and reason on his side: we acknowledge the absolute authority of wise men, and are willing and thankful to be taught; but it is misery enough to be told we are wrong, without feeling the *lash*; and we ought to feel confidence in the press, and not a dread of what such and such a periodical will say,

Yours, &c.,

AN ADMIRER OF TURNER.

##### BRISTOL AND EDWARD BIRD.

SIR,—After the clamour that has been raised about the vindication of the city of Bristol (with which I have nothing to do), I think its best vindication would be to inscribe, on a plain slab, over his grave, in the cloister of the Cathedral, an inscription similar to that which you will find I got inserted in the *Bristol Gazette*, which I send you this day; and if you will copy it into your widely-extended ART-UNION, you will benefit the Arts by showing a disposition to do justice to an eminent artist, whose memory has been neglected in the city he adorned for near twenty-four years, for I can assure you that here it has been refused by other parts of the press, which carries with it an air of animosity not very reputable.

I remain, Sir, yours, &c.,

Bristol, June 9th, 1843.

G. C.

To the Editor of the *Bristol Gazette*.

SIR,—As the press of Bristol has of late been much engaged in reviving the memory of that able artist, Edward Bird, R.A., it may not be inopportune to request you to print a few lines, which might with propriety have been inscribed on a plain marble tablet, near where his ashes repose, if any monument had been subscribed for.

Yours, &c., G.C.

##### EPITAPH.

"Reader! beneath thy feet, marked by a small diamond slab, repose the mortal remains of Edward Bird, R.A., a citizen of Wolverhampton. He was interred in this cloister at the desire of his surviving friends, in order to honour his memory and talents, and the virtues of his unblemished life. He was a self-taught artist of deserved celebrity; and his compositions, in point of genius and simplicity, resembled those of Goldsmith, the poet of nature: always founded on close observation of character, always moral, and never sarcastic beyond what the subject demanded. His grouping was admirable, his colouring faithful to nature, and, as he generally used living models, the expression was correct, as well as the costume: witness his 'Opening the Will,' painted for the

Marquis Hastings; the 'Psalm Singers,' for the Prince Regent; the 'Auction,' for Mr. Blighouse; the 'Chevy Chase,' for the Marquis of Stafford; and the 'Surrender of Calais,' for the Princess Charlotte of Wales. His 'Sufferings of Job,' and the 'Death of Eli,' did him great honour; as well as his 'Embarkation' and 'Debarcation' of Louis XVIII. for the Prince Regent and Duke of Bridgewater, both of which last were faithful representations of not alone the facts, but the persons present, and are records of national honour, when England restored France to the Bourbons, with the consent of her Allies. His smaller productions are full of excellence and harmless humour; but, alas! premature infirmity suddenly interrupted his noble exertions, and he died in the prime of life, no way enriched by his success, leaving his family unprovided for, excepting by a small pension from that academy to which his admission was an honour, and a sum arising from a present from Prince Leopold, added to the exhibition of his works, to which the citizens of Bristol liberally contributed: for he had not an enemy, and his well-known generosity and gentle philanthropy gained him universal esteem."

#### VARIETIES.

**CARTOON COMPETITION.**—It is publicly announced that the exhibition of the Cartoons will be opened on Monday the 3rd instant, at the charge of a shilling for admission: an arrangement that will continue during a fortnight, at the expiration of which period the exhibition will be opened gratis. The private view takes place this day. The money received during the fortnight will be applied in promotion of the Fine Arts, in a manner hereafter to be determined. As the works have been sent in anonymously, of course competing artists desirous of visiting the exhibition early (and we may say this will be the entire number) must enter on the above terms. The award of the prizes has been made: this matter will undoubtedly be much canvassed when the decisions are published; but of this at present nothing can be said. We can only hope (indeed we cannot doubt it) that the award has been judiciously made. The number of Cartoons is, we believe, 143, or thereabout, whereof a proportion are works of very high merit, which must at once silence the absurd assertions prevalent with respect to the drawing of British artists. Many of these compositions are, we know, by young artists; and others have been executed in great haste, justifying observations we have repeatedly made with respect to the untried powers of our school; not that any will be the better that they are hastily done, but showing that there is even no lack of that kind of skill so vaunted in other countries. We believe that in this exhibition there is sufficient reason to congratulate the profession on the triumphant reply they render to the imputation of inefficiency. In our next number we shall examine fully the pretensions of the exhibition, and notice at some length its most prominent features.

**DECORATIONS OF THE HOUSES OF PARLIAMENT.**—The Royal Commission give notice (see advertisements) that wood-carving will be required for various parts of the New Palace, and artists are invited to send in specimens of this department of Art in the course of the first week in March 1844. There has existed for some time a taste for furniture carved in the antique manner, which has fostered and improved the art of carving, inasmuch that we doubt not when the period arrives, there will be an exhibition worthy of the occasion. As it is intended also to decorate some of the windows with stained glass, specimens are also required in this department to be sent in at the same time as the wood-carvings. With respect to exhibitions, the same regulations prevail as for the Cartoons, that is, that they are to be British artists, or foreigners who may have resided in the United Kingdom during a period of ten years.

**MARQUIS OF WESTMINSTER'S HOUSE, GROSVENOR-STREET.**—While several buildings that have been for some time talked of are not yet even commenced, the very handsome piece of architecture, erected by this nobleman as a screen façade before his mansion, has taken us almost by surprise. Though of no very great size or extent—not more, perhaps, than 120 feet in

length by 30 in height—it is not only very striking in appearance, but has an air of considerable dignity, without any more pretension than what it fully supports. The design may be described as consisting of an open colonnade of the Roman Doric order, formed by eight columns, and connecting the two carriage entrances; besides which are two doors, one at each end. Handsome in themselves, these last-mentioned features not only enhance the variety of the *ensemble*, and increase the comparative or *proportional* size of the adjoining archways and their bronzed open-work gates, but give a characteristic expression of solidity to the extremities of the screen. Over each of these end-doors is a small ornamental relief, in a sunk panel within a sunk border, which, we think, would have shown itself to more advantage had the figures been in bronze, so as to carry out the colour of the doors themselves, and of the gates, and candelabra for gas-lights. Of these last there are seven, viz., one in each intercolumn of the open colonnade, placed upon the podium or continued pedestal on which the order is raised; and when all of them are lighted, the effect must be exceedingly brilliant—not merely splendid, but almost "fairy-like." Instead of being there discontinued, the order is displayed in the gateways, if not exactly with increased effect, with some increase of display; the columns being placed in pairs, the doing which is in this case sufficiently justified by the evident motive for it, although it is somewhat a license in general practice, and even here differs from the arrangement of the open colonnade where the pillars are placed singly. The difference thus occasioned is an appropriate one, however, in itself, which it would not have been had it been reversed by the pillars of the open colonnade being in pairs, and those to the gateways single. The gateways themselves, with their columns and pilasters behind them, form projecting breaks in the composition, so as to give the whole a sufficient degree of substance and solidity, and avoid that excessive lightness which might else look like flimsiness, as is the case with the screen-entrance to the park of Sion-house, Brentford. Owing to the depth thus obtained for the gateways, the pediments over them show well in perspective. We are sorry that we cannot extend our commendation to more than the screen itself; but the court behind it, and the front of the house, are so utterly unworthy of, and out of keeping with, it—in some respects so very paltry—as almost to console us by assuring us that it is not intended that they shall remain so; but that, if not immediately, at some future time the whole will be rendered of a piece. In the meanwhile let us be thankful for what we have got, and let us hope that such example will not be without influence in other quarters, where there are opportunities for making any degree of architectural display.

**THE UNIVERSITIES.**—Several architectural improvements are either actually in progress, or about to be put in hand, at both Oxford and Cambridge. In the former city the Martyrs' Memorial has just been finished, and Mr. Cockrell's structure for the Taylor and Randolph Institute, which is just by it, is approaching towards completion. The chapel of St. John's College is to be fully restored forthwith, under the direction of Mr. Blore; after which the work of improvement will be extended to the hall and front of the college. At Balliol College improvement is to take place on a very extensive scale, although nothing is as yet definitively settled; at least not made publicly known. Mr. Pugin was at first spoken of as the architect to be employed; certainly a very able one, but his being a Roman Catholic, and, moreover, an exceedingly zealous one, has been considered an insuperable objection; and no doubt, were he to be employed, it would be represented both by Catholics themselves and by those who incline to Catholic feelings and practices in matters of church discipline, as a sort of triumph, and a

step to something further. Who is now to be the architect engaged seems at present to be undetermined. At Cambridge a new cemetery has been planned, with a lodge and chapel, in the pointed style, by Mr. E. B. Lamb.

**KING'S COLLEGE.**—The museum at King's College, London, was opened to the public on Thursday, the 22nd of June. His Royal Highness Prince Albert honoured the opening with his presence, as did several noblemen and gentlemen. One of the students read a Latin address, and Hullah's pupils in the school and college sang the national anthem. The Prince appeared much interested in the works of Art exhibited to him and explained by Professors Wheatstone, Daniell, and Cowper. It was intended that a royal salute should have been fired from the shot tower, opposite Somerset House, in honour of the Prince, but this did not take place in consequence of some default in the arrangements.

**OLD LONDON WALL.**—If the good citizens of London continue their course of "demolition" for a very short time longer, not a trace or memorial of ancient London will remain to attest the truth of historical records (which, fortunately, are beyond their reach), or to instruct the mind, and incite the imagination of those who look contemplatively on remnants of the past. Nearly the only remaining portion of the old wall, which formerly surrounded the city, is now threatened with immediate destruction—indeed would have been levelled with the ground and broken up to mend the roads by this time, if the public voice had not protested loudly against so unwise a measure. Anxiously we add our protest against it, and earnestly entreat the authorities to reconsider their determination, and to preserve the wall if possible. It is situated at the back of Trinity-square, Tower-hill, and is partly of Roman work, partly of Norman. The subject was brought before the Institute of Architects at a recent meeting, and found a unanimous response in favour of the wall. Lord Northampton suggested that the Institute should communicate with the Society of Antiquaries, and jointly present a memorial on the matter. The difficulty, however, with which the latter body moves in such cases is so well known that we have little confidence in the result. Our chief hope rests in the authorities themselves: they must have acted unwittingly when they assented to the destruction of the interesting relic in question, and now that their attention is called to it, will, we trust, retrace their steps.

**SIR SIDNEY SMITH.**—A monument is about to be erected, by subscription, to the memory of the late Admiral Sir Sidney Smith, in the cemetery of Père la Chaise. In the list of subscribers we find the names of several officers and soldiers of the French army who served in Egypt: a sacrifice of national prejudice worthy of general imitation.

**TRAFALGAR-SQUARE.**—Until it shall have been finished and laid open to view, it is not very easy to judge what will be the effect of this "square," as it will be so totally different in character from anything we now have bearing that appellation. Instead of being, as usual, a planted enclosure or garden, it will form an open area, decorated architecturally, not only by the terrace and steps on its north side, but by two fountains throwing up water to the height of about forty feet. These last-mentioned embellishments cannot fail to prove striking novelties, and will, no doubt, be sufficiently handsome in themselves; yet, whether the general ensemble, formed by the area itself and the buildings surrounding it, will be altogether satisfactory, may fairly be questioned, it being not unlikely that the completeness thus aimed at will cause many irregularities and incongruities, which cannot now be remedied, to show themselves more strikingly, and of course more offensively, also, than they do at present. If we look at the "place" as a whole, the position of the Nelson Column must certainly be allowed to be *eccentric*; neither does it promise at present

to turn out a very imposing object of the kind, while it is of a kind in which mediocrity of character is inexcusable. Whether our apprehensions be groundless or not, apprehensive we are that, when completed, Trafalgar-square will show itself to be a very *planless* improvement—a straggling, *amorphous* open space, where no more regard has been paid to system and arrangement than what is enough to make apparent how very confused and irregular it is as a whole, and how very discordant are its parts. Such is the natural consequence of adopting a piecemeal course of improvement, where a well-considered scheme ought to be laid down at the very first, so as to leave nothing to chance and change, as has unfortunately been done in this instance.

**REMBRANDT.**—The Dutch, are about to erect a monument at Amsterdam to the memory of this famous painter.

**ROYAL SOCIETY FOR THE ENCOURAGEMENT OF ARTS, MANUFACTURES, AND COMMERCE.**—A numerous assemblage took place at the chambers of the above society, in John Street, Adelphi, to witness the distribution of prizes by his Royal Highness Prince Albert, who, accompanied by his Grace the Duke of Sutherland and the Marquis of Northampton, arrived at a quarter past twelve, and immediately took the chair. The main object of this society is to promote the arts, manufactures, and commerce of this kingdom, by giving honorary or pecuniary rewards, as may be best adapted to the case, for the communication to the society, and through the society to the public, of all such useful inventions, discoveries, and improvements as shall tend to that purpose; and it was stated, in furtherance of this plan, that upwards of £100,000 had been expended, derived from voluntary subscription and legacies. When the distribution of the prizes was terminated, the Duke of Sutherland rose and said, he was well assured he was doing only what was acceptable to every individual present, as also to every member of the society, in expressing, on their behalf, their warm acknowledgments for the very kind manner in which his Royal Highness Prince Albert, so soon after becoming president of the society, had come forward to preside over the meeting and distribute the prizes. The motion was seconded by the Marquis of Northampton. His Royal Highness bowed, and after expressing himself highly pleased with the proceedings, left the house.

**MILTON.**—A tablet has been erected on the walls of All-Hallows Church, in Watling-street, to the memory of Milton, with this inscription:—

"Three poets in three distinct ages born,  
Greece, Italy, and England did adorn.  
The first in loftiness of thought surpassed,  
The next in majesty, in both the last;  
The force of nature could no further go,  
To make a third she joined the other two."

John Milton was born in Bread-street, the 9th of December, 1608, and was baptized in the church of All-Hallows, on Tuesday the 20th December, in the same year.

**THE SCULPTOR, GIBSON.**—We have had an opportunity of examining a recent work—one of the latest works—of this distinguished artist. It is a monument, in basso-relievo, to the memory of Edward Roecoe, son of the THE Roecoe, placed in the church of the Unitarians at Liverpool. A single figure of Hope, with

"Looks commercing with the skies," carved in the purest marble, imbedded in a coloured slab; at her feet is an anchor; the morning star is rising overhead. Such are the simple materials out of which this man of genius has produced one of the most impressive *lessons* it is possible to imagine. It is a creation of entire grace and beauty; but so holy in its form and attitude; so powerful in its great purpose, that the heart, mind, and eye, cannot fail to become happier and better by the contemplation of so grand and meek a stimulus to virtue. After gazing upon it—and it is no exaggeration to say that we did so with every faculty and feeling ab-

sorbed in admiration approaching to awe—we learned some particulars of the Sculptor's history. They are in all respects so honourable to him, that he will not blush to see them in print. He was born about the year 1793 or 4, at the village of Batters, in North Wales, at the foot of Penmanmuir. His father was a gardener, and removed to Liverpool soon after the birth of his son. Here, at a very early age, he was apprenticed to "a wood carver;" the house in which he served this apprenticeship we made a pilgrimage to see. It is now in process of demolition, to make room for a more stately dwelling. While in this employ he attended an evening drawing-school, held by a Mr. Pether, (brother to the artist who has been distinguished for his moonlight subjects). One of his drawings having been seen by Mr. Franceys, of the firm of S. and T. Franceys, stone-masons and ornamental designers, of Liverpool, he requested the boy-artist to make some model for them. This was done; a small model in wax, of 'Time' was produced in a few days; and the result was, that Messrs. Franceys purchased the youth's indentures—five years of his apprenticeship then remaining unserved—and took him into their establishment. The model and the memoranda of agreement are still in the hands of Messrs. Franceys's successor—Mr. Spence, of Liverpool. The amount paid by Messrs. Franceys was £70; it was paid not in money, but in chimney-pieces; and Gibson agreed to serve an additional year, in order to liquidate this debt incurred for his advantage; so that he remained with Messrs. Franceys six years. Mr. Spence, once his fellow apprentice, also possesses a large collection of sketches made by Mr. Gibson during this period. They are masterly in the highest degree; and might have justified any prophecy of his after fame. Mr. Franceys died a few years ago; but lived to see his pupil ranked among the great men of Europe. Mr. Gibson has been long a permanent resident in Rome; and only occasionally visits his native country. We have heard several anecdotes in proof that the amiability of his disposition, his uprightness of conduct, and his goodness of heart, are the same to day as they were when a boy—and to his many virtues his fellow student and pupil, Mr. Spence, bears glad and grateful testimony.

**ART-UNION BRONZES.**—We have had an opportunity of examining a small bronze, a certain number of copies of which are due to prizeholders of the London Art-Union. The subject is 'Michael and Satan,' after Flaxman's work, the size of life. It is the work of Mr. E. B. Wyon, and is, we believe, one of the first small bronzes that have been executed in this country. Satan, it will be remembered, is prostrated, while Michael, treading upon him, is about to pierce him with a spear. The fallen figure in his lower extremities is a serpent, which in the composition is beautifully arranged as a support to the upper figure, leaving it free, inasmuch that, whatever view is taken of the group, this rises beautifully and effectively above the lower parts of the composition.

**SALES OF MONTH PAST.**—At the sale of Mr. Herts's collection by Mr. Phillips, two exquisite cabinets in mosaic work were sold—one for 610 guineas, and the other, with the addition of having precious gems added to its enrichment, for 640 guineas. A work by Dinglinger, called the 'Tomb of Confucius,' fell at 115 guineas; and we think this object sold under its just value. The little gems, including agate cups, very beautifully mounted, as well as items of cinque cento work, generally sold at high prices; as did some of the finer bronzes and miniatures. The sale produced nearly £28000.

At other recent sales an 'Amorino,' by Canova, from the collection of Lord Cawdor, 'Bust of Nollekens,' by Chantrey, 81 guineas; 'Bust of Horne Tooke,' by ditto, 30 guineas; and a 'Sleeping Beauty,' by Gott, 125 guineas.

## REVIEWS.

**AUNT ELINOR'S LECTURES ON ARCHITECTURE, DEDICATED TO THE LADIES OF ENGLAND.** 12mo., London, 1843.

Whether Aunt Elinor be really of the feminine gender, or merely playing a "petticoat" character, for the purpose of recommending the study of architecture more plausibly and consistently to ladies, we pretend not to decide; but that the latter is the case appears to us highly probable, there being several matters touched upon in the book not very likely to have proceeded from a female pen addressing female readers. Be that, however, as it may, it certainly is a novelty, and also a very agreeable sign in itself, to find what has hitherto been considered utterly out of the pale of female studies expressly recommended as a very appropriate one. Never, we were going to say, has this been done before; when Wightwick's "Palace of Architecture" occurred to our recollection—a work written with a considerable degree of eloquence and enthusiasm, and advocating, in very strong terms, the claims of architecture as an accomplishment in the education of the sex; nor is it the less remarkable for proceeding from a professional man—the only one, we believe, who ever thought that women could acquire any knowledge of architecture, or had, in fact, any right to do so. It might therefore be supposed that my "Aunt" would, of course, pay some compliment to one who had been so complimentary and gallant towards her own sex; nevertheless, most strange to say, she has not even so much as inserted the title of his book in her "List of Works for Study," notwithstanding that she there puts both Warton's and Wordsworth's *Poems*! though for what reason she does not explain, nor can we divine. In that "List" she also refers to three numbers of the "British Critic," which leads us to suspect that "Auntie" is somehow more especially interested in them; else wherefore should she have pointed out them so very particularly, as if they were the only papers of the kind to be met with in our periodical literature; when there are in fact so many that were they all collected together, they would form a voluminous series.\*

One point on which we naturally expected that Aunt Elinor would have something to say, she has passed over altogether, taking no notice whatever, not even in a preface, of the singularity of her attempt to popularize a study which, owing to various prejudices, has hitherto been regarded as almost exclusively a professional or technical, except inasmuch as it is an antiquarian one. Preface, indeed, there is none; but there is an Introductory Letter, in an oddly gossiping strain, by-the-by, informing us that these lectures were drawn up by her "for the children's winter-evenings' amusements;" of this, however, there is not the slightest internal evidence whatever, there being no attempt at that familiar explanation which is absolutely requisite for the uninitiated. It is not every one who possesses knowledge that possesses also the art of communicating it to others; at least, not at all attractively and interestingly. Brevity is not altogether so certain a mode of escaping tediousness as it at first might appear to be, for it is apt to occasion the most distressing wearisomeness of all to a beginner, that of feeling he has got only a few insulated and indistinct ideas that will not serve him even as a groundwork to go upon.

What is here said on the subject of the "Classical Orders," amounts merely to two pages of dry definitions, nor is any notice whatever taken of their respective *proportions*, and other characteristics. To teach how to look at, and what to consider in them, is not even attempted; consequently how far it is calculated to instruct children and novices may easily be guessed. From the ancient "Orders," Aunt Elinor passes at once, without a syllable as to the modern application of them, or even a hint that they continue to be still employed, to the subject of "English Ecclesiastical Architecture," which is, in fact, the branch of the art exclusively treated of in her "Lectures," and

\* A list of such articles, and others on subjects of Art, and Artistic criticism—at least of the best of them—would be useful, as it would serve as a sort of general index, informing us where we could find what is now scattered over so many publications, that it becomes a formidable task to search for it. We do not, however, feel certain that our own readers would care to be furnished with any list of the kind, therefore do not promise to supply one.

treated of in a peculiar way,—certainly not as we should at all expect to find it, considering to whom they are addressed, for she begins by adverting to a good many mystical fancies, more likely to mystify than to instruct beginners, or afford them a clear insight into the matter. What is chiefly to be gathered from it is that Aunt Elinor is a staunch advocate for the notions entertained by a party who have lately sprung up in the church, and who lay very great stress upon certain forms in matters of church discipline and ecclesiastical architecture. The book smells of "Tractarianism" and Oxford, and is evidently written in a strong party spirit, instead of aiming at that popular tone which its title would lead us to anticipate. In fact, the title is by no means so candid and explicit as it might have been: since, instead of being architecture in general, it is only Ecclesiastical architecture which is here treated; accordingly the qualifying epithet ought to have been expressed. Even, too, what is treated of is done so in such manner that it presupposes some general acquaintance with the study beforehand; for instead of the elements of the general system and style of our ancient church architecture being clearly explained and illustrated at the very outset, we obtain only an historical survey of the varieties or styles of its several periods; which, though useful enough in itself by way of refreshing the memory, is not the most intelligent mode of teaching in what seemingly professes to be a work of initiative instruction. By no means do we deny that there are some clever and interesting remarks, but to us they have the effect of being brought in too desultorily and rather gossippingly; and some of them are quite out of proportion to the scale of the book. In fact, the writer seems in some places to forget his part, and, dropping that of "Aunt Elinor," enters into criticism for which *her* readers can hardly be prepared—indeed can hardly be understood, except by those who are tolerably familiar with the examples referred to, or have other works at hand to which they can turn for illustrations of them. What illustrations there are in the book itself, are so exceedingly few as to be scarcely of any service.

Most unreasonable would it be to expect that it should afford anything like full information relative to a subject so very extensive in itself, though also in itself but a portion of architectural study; still, as a mere outline, it might have been more complete, more uniform, and more of a piece; whereas we here find various matters, more or less important, passed over altogether.

On the other hand, an entire lecture is devoted to the subject of Fonts and Altars, and in the course of it the writer displays strong "Catholic" feeling—not to say prejudices. It is very earnestly recommended, and at some length, that ladies should employ themselves in embroidering "altar-cloths," as donations to churches; yet it may be questioned whether, if adopted as a *fashion*, such practice would be little better than the ostentation of piety. Aunt Elinor, however, thinks very differently, and lectures a good deal on "these hard, selfish days," when "it is the fashion to bring up girls on the principle of looking after the main chance, and yet people wonder that they meet with young ladies in society, vulgar-minded, interested, and mercenary, in spite of accomplishment and grace." There is a good deal more in the same strain, and also what sounds like an impressive exhortation to ladies to prefer a state of single blessedness; which last piece of advice may be thought the far less agreeable of the two to follow. In the last lecture, on Stained Glass, she recommends ladies to practise not only that, but "the art of illuminating in the style of the ancient missals," for compositions of their own, as presents to their friends—harmless enough occupation, certainly, yet somewhat too "nun-like," unless we are going to establish nunneries for the votaries of celibacy.

In our opinion, it would have been far more to the purpose, had the writer pointed out distinctly the advantages to be derived by *females* from the study of architecture—an art to which they can never apply practically, and therefore, according to vulgar prejudice, cannot have the slightest occasion to understand it. If it be asked what they can gain by it, we reply, very much directly, and indirectly a great deal more, for it not only enables them to see where before they had no eyes, to enjoy beauties of which they had no conception, consequently no relish for them, but it also forms

and refines their taste generally, teaches them to examine as well as to look at buildings, and to judge as well as to examine. If it be at all such in itself, a work of architecture then becomes to them a work of Fine Art, valued for the gratification it affords, not merely at the time or when first of all beheld, but afterwards in recollection, or when it has become familiar to the eye.

Aunt Elinor has taken, if not a very narrow, a very partial and limited view of the subject; however, what she has done is in itself a very great step forward, and so far she is well entitled to our thanks.

CHARACTER AND COSTUMES OF AFFGHANISTAN.  
Drawn by Captain LOCKYER WILLIS HART.  
Lithographed by HAGHE. Published by HENRY GRAVES and Co.

All information relating to Affghanistan has been received among us with avidity, inasmuch that even the doubtful and the false have been welcomed in the absence of true report. Authentic narratives have now been received, which speak of the various nations and tribes encountered by our troops during the late expeditions. But even after perusal of these accounts there is yet a curiosity remaining which they cannot gratify—a curiosity to know more than can be conveyed by description of such enemies as could effect the destruction of a force in a manner never before experienced by an army under British orders. The large folio volume before us is a pictorial appendix, affording portraits of the most remarkable persons whose names have long been familiar through the columns of newspapers. It leads us from Hyderabad to Candahar, and thence to Gurnee and Cabul, and gives specimen portraits of inhabitants of those places, as also of individuals of the intermediate tribes. The number of plates is twenty-six, commencing in the title-page with a view of a portion of the Kyber Pass, being the entrance to this far-famed defile from the territory of the Sikhs, together with the Castle of Futehgurh. The foreground is occupied by three figures: a Kyberce, a Beloochee, and an Affghan, showing the different costumes of these tribes. In the two first plates are shown inhabitants of Scinde, the state barge of the Ameers, and the ancient Castle of Sehwan on the Indus. The group, "Kaukers of the Bolan Range," is highly interesting, as showing the kind of men by whom the pass is infested, who levy contributions on all passing caravans, unless they be protected.

The Kaukers inhabit the south-eastern confines of Affghanistan, the greater part of which country is mountainous and unfertile. They are rude in their manners, and much given to robbery and murder. The Bolan Pass is infested by them, nor at any time could caravans traverse it, unless under the protection of strong escorts. In that neighbourhood they wear, during winter, a short, close jacket of sheep-skin, with an upper garment, or cloak, of felt, made with sleeves, closed at the end, which they use as pockets to carry provisions in. The felt is manufactured of wool: the women knead it in their hands till it assumes consistency; it is then spread out to the size required, and, when finished, is from a quarter to half an inch thick, and soft and pliant. Mutton or goat's-flesh, cut into small pieces, and roasted on their ramrods, forms their chief food. When they possess grain it is pounded, and baked by being plastered on a heated stone. A figure on the right hand of the drawing, as also the one with a small cap on his head, are petty chieftains. The costume of the latter is nearly similar to that of the inhabitants of the plains. A man on the left, naked from the middle upwards, as they go during summer, was sketched while chanting the exploits of a successful leader—their wars with the rival tribes being always a favourite theme with this wild people. The march of Lord Keane's army, with its immense train of baggage and cattle, through the Bolan Pass, drew to that quarter crowds of Kaukers, Beloochees, Brahoochs, and other plundering tribes; and, although they suffered severely when in contact with the troops, numbers of the defenceless camp-followers perished at their hands, under circumstances of the most revolting cruelty. The slaughter of an idolatrous Hindoo was considered a meritorious act, as insuring him a passport to paradise. Mahomedans were murdered on the plea that they had disgraced their creed by serving infidels. When at Quetta, Sir W. Macnaughten ordered a corps of eight hundred men to be raised from the

tribes of that vicinity, to be employed in keeping the pass open; but this measure had not the desired effect, and they were subsequently disbanded.

With respect to the Tartar countenances of the inhabitants of Kelat-i-Giljee, they are very remarkable, and the more so as being surrounded by other tribes of a very different facial conformation, as, for instance, the features of the inhabitants of the Khojuek Pass seem to be well formed and even handsome. The interior and exterior of the Tomb of the Sultan Mahmood is shown in two plates. It was from this place that the far-famed gate of Somnath was removed, and of which the last plate in the series affords a drawing. It is said to be of sandal wood, and to be the same brought by Mahmood, sometime about the end of the tenth century, from the Hindoo temple of Somnath, in Kattywar: it is in panels, carved and well joined; in height it is about 14 feet, and in its entire width, nine. In the tenth plate is a portrait of Shah-Shoojan-ool-Moolk, together with those of his sons, Timoor and Sufter Jung. One of the most remarkable portraits in the series is that of Dost Mahomed Khan, who is represented seated on a carpet, an attendant holding an umbrella over him. In his dress he was distinguished by his plain white attire, in remarkable contrast to the gold-embroidered cloaks and vestments usually worn by the chiefs about his court. On his right hand stands the notorious Persian intriguer, Abdool Samad, whose double dealing being discovered after Dost Mahomed's unsuccessful campaign against the Sikhs in 1837, was dismissed his service, and retired to Bokhara, where his baneful influence with the ruler of Bokhara is supposed to have operated to the prejudice of that lamented officer Colonel Stoddart. Dost Mahomed was one of the youngest of twenty-two sons who were living at the death of his father, and his energy and talent, even while untutored and illiterate, enabled him to seize opportunities of advancing his fortune, and, by a firm reliance on his own resources, to secure, after many struggles, the paramount power of Cabul.

In another plate is a sketch in Cabul, showing 'A Fulloodeh Stall, with Huzzarehs carrying Snow, &c., to Market.' The stalls where snow is sold are very tastefully fitted up. A pillar of the commodity stands in one corner, a fountain plays behind it, while pots of flowers and loaves of sugar are arranged on either side. The month of May is the season for the fulloodeh, which is a white jelly strained from wheat, and drunk with sherbet and snow. So fond are the people of it that they call it "rahut-i-jan," that is, solace of life. One of the Huzzarehs is carrying snow for sale. In the winter these people collect it in pits lined with chaff, where it is rammed down and covered over. When required, during the summer, it is cut out in pieces, and taken to market on men's backs. Another, with a pole slung over his shoulders, supports a pile of earthenware vessels filled with buttermilk, separated from each other by slips of wood. A third holds a bag, containing "kroot" (dried curds pressed into hard lumps), some of which he is bargaining to exchange for bread with the baker's boy seated near him.

Plate the 18th is the retinue of Shah Shoojan-ool-Moolk, which consisted of attendants wearing the extraordinary and fanciful costumes presented in the drawing. Some wear caps, with the horns of antelopes fixed to the sides; others, head-dresses, with other decorations not less fantastical. It was the office of the former to clear the way for the Shah; while another body of attendants, dressed entirely in scarlet, and bearing standards of the same colour, with the ends tucked into the back of their waistbands to prevent their flapping, moved in lines parallel to his Majesty: the rest either ran alongside or followed in the rear. This kind of public state was hateful to the Affghans, but it was, nevertheless, carried by the King to an absurd extent.

The career of this ill-fated monarch has been one of vicissitudes unparalleled in the modern history of Asiatic princes. Defeated in his first attempt to mount the throne of his ancestors, and forced to seek refuge amongst the Khyber tribes, he there collected troops which enabled him to drive his rival from Cabul, and secure the object of his ambition. After a precarious tenure of a few years, during which the mission of the Hon. M. Elphinstone visited his court, he was again overpowered, and necessitated

to seek the doubtful aid of the Sikh chieftan Runjeet Sing. Subjected to many indignities by that wily potentate, he only escaped from confinement at Lahore by creeping through the public drain of the city. Obtaining an asylum and a pension for himself and relatives in the British station of Loodiana, he not long afterwards failed in an attempt to take Peshawur. The interval of fifteen years subsequent to this disaster he passed in repose in the bosom of his family, but in 1833 he was once more in arms. Ill fortune still attended him, and he fled from Candahar before the victorious troops of Dost Mahomed, to seek protection, after an eventful campaign of two years, at his former quarters in India. In 1838 the policy of the British Government inducing it to espouse his cause, opened once more the sovereignty to him, or, as he emphatically expressed it, "enabled him, before he died, again to see Cabul." Although conscious of the unpopularity of the means employed to recover his kingdom, he was unable to remedy his position. His endeavours to conciliate his subjects, and at the same time to act with fidelity to his allies, rendered him an object of hatred to one, and of suspicion to the other. His conduct during the late insurrection has been much commented upon; but, whatever may have been his errors, his fate is deserving of sympathy. Early this year he was induced, by the representations of the chiefs, to quit the protection of the fortress of the Bala Hissar, and pitch his tents outside Cabul. When proceeding to the camp at Seeah Sung, he was waylaid and shot by a party of matchlock-men under Shoojan Dacola, eldest son of Nuwab Zuman Khan, in revenge it is said for having instigated one of his followers to attempt to assassinate Ukbar Khan at the time he was besieging Jellalabad. It is worthy of remark that the king was present at the birth of his murderer, on whom, in compliment to the parents, he conferred his own name. He often received his European visitors in a standing position, and at such times used a staff of antelope's horn to lean on as a support. His "chaga," or outer garment, hanging loose over his shoulders, is ornamented with jewels at the loops: a slit is made on one side for the end of his dagger to pass through. From the corners of his cap of black velvet hung emerald pendants. The expression of his countenance is grave and care-worn, and frequent exposure to the weather has given a dark hue to his complexion.

To this succeeds a group of Affghan and Kuzzilbash ladies. The costume of the Affghan women is very simple, and, being so, leaves the body at perfect liberty. They wear trousers, which are wide, and made of cloth, silk, or other coloured materials; and their upper garments consist of loose yellow, blue, or red jackets (the outer one edged and embroidered with lace), which hang down below the waist. To the arrangement of their hair they devote much of their time. It is plastered down in front with gum, in various forms, while behind they plait it into numerous tails, hanging over the shoulders and back. From the lobes of their ears hang large earrings, and smaller ones decorate the outer margins. They use rouge, and tip their eyelids with antimony. Their chests and necks are dotted over with the shapes of flowers and stars. Pendent over their forehead hangs a filigreed vinaigrette, containing otto of roses, or some other scent. When going abroad they draw on leggings of cloth, footed with horse leather, and gartered at the knee, and envelop their persons in a large garment, called a "boorka posh," having eyelet-holes in front, which completely prevents their being recognised in the street. The dress of the Kuzzilbash women is, at home, exactly the same as that of the Affghans; but, abroad, they are distinguished by wearing a veil of horsehair.

The 24th plate is a portrait of Ukbar Khan, with Jellalabad in the background. This famous character is mounted, and wears a mailed frock and hood, together with gauntlets, also guarded with iron. The face is round, inclining to a Jewish cast, and is altogether in appearance a remarkable personage. Soon after the breaking out of the insurrection he joined the insurgents, and the part he there played is sufficiently known. Of his character one of his late prisoners thus speaks:—"He is in every respect a very remarkable person, gifted by nature with no ordinary abilities of mind (not heart). A neglected education and over-in-

dulgence have in a great measure nullified these advantages. He possesses talent without knowledge—energy without prudence—courage without coolness—decision without self-control—liberality without principle. He is revengeful, passionate, and capable of any atrocity when roused; but on ordinary occasions his acts are kind, and his manner courteous. His conduct towards the prisoners was always frank, friendly, and considerate, and he did his best to make them comfortable. When marching about, their fatigues and privations were excessive; but at that time the chief was a fugitive. When he ordered them to Toorkistan his evil passions were at work, and there can be no rational doubt had they not escaped, he would have consigned them to a life of slavery."

The town of Jellalabad, situated between Cabul and Peshawur, was, when first occupied by Sir Robert Sale's force, partially encompassed by a mud wall in a state of ruin, without parapets or ditch, covered way, or outworks of any kind, and surrounded on every side with gardens and houses, enclosed fields, mosques, and ruined forts, affording strong cover to an enemy.

Besides the plates mentioned, there are others not less interesting; the whole accompanied by descriptive letter-press in such a form as to afford a mass of information with respect to the countries and their inhabitants, and on the whole the work is the best illustrative companion that can be had to any narratives having their scenes in those parts of the globe. To the lithography by Haghe, we need scarcely allude; it is executed with the usual excellence of the artist.

THE HANDBOOK OF TASTE; OR, HOW TO OBSERVE WORKS OF ART, ESPECIALLY CARTOONS, PICTURES, AND STATUES. By FABIUS PICTOR. Published by LONGMAN and Co.

We cannot agree with the writer of this book in the assumption of his title, that taste and the true estimation of works of Art are to be taught by a handbook, although the substance of his little book is well directed and judiciously arranged, and contains information, conveyed in a most comprehensible form, to an intelligence improving into a knowledge of Art. He alludes, in his preface, to the proposed decoration of the New Houses of Parliament; to the exhibition of Cartoons; and to the wisdom of public judgment, wherein his few observations are just and appropriate, but yet insufficient for the inference of a so readily maturable intelligence in the mass.

We have too few writers upon Art, and the few we have are not sufficiently read, and when read little understood, because to appreciate them some preparation is necessary. The author of this little work does not bring it forward as a compendium of his own opinions; but declares its precepts to be in the spirit of Da Vinci, Winkelman, Mengs, Milizia, Lessing, and Reynolds. Of the qualifications of a painter it is said:—

"One who knows how to colour, if he colours well, has made himself master of a difficult craft, and deserves such praise as you would bestow upon a good workman; but he is not an artist."

"A painter who invents, composes, and colours subjects which are pretty and pleasing enough in themselves, but produce no effect upon the mind, nor any result beyond the visual gratification of the observer, merits undoubtedly to rank first among decorators; but he is not an artist."

"But the painter who represents ideas exalted, just and noble, in such a manner as to transmit them from the canvas into the breasts of those who behold it, and to excite in them the emotions, thoughts, affections, or antipathies with which he himself is inspired—As is an artist, equal in all respects to the first of orators, poets, or historians."

This is to say, that he who addresses himself to the sense is not an artist; but he who establishes a communion with the intellect is an artist. We will not stop to inquire the meaning of the term artist; as this writer himself declines doing so, it is sufficient to know that he means that no painter is an artist unless he have the power of affecting the mind according to the temper of his subject. That he cannot be a good artist must universally be felt to be true, as also must it be acknowledged that mere ocular perception, unaided by that kind of discipline which teaches the estimation of works of Art, cannot guide the spectator in an examination of works of Art addressed to the intellect: hence it is that mere imitative Art is more readily intelligible to the uneducated than the refined argument of delineative power; a highly finished Dutch picture representing familiar objects, would

strike more the uncultivated taste than a production of high class Art.

In the above quotation colour is spoken of somewhat disparagingly: it is said to be mechanical, or at least so we interpret the meaning of the passage, and presume that the colour of the human skin is meant. We cannot help thinking that to him who succeeds best in following nature in this particular there is more praise due than to a mere mechanic. If this be true, why are there so few fine colourists, and why are those most distinguished by this accomplishment so loudly praised? Undoubtedly the chief qualifications of a picture lie in the style of its narrative, but colour has assuredly much to do with its approach to nature. We continually meet with painters who conceive and draw well, but who have never produced one picture that could be said to be well coloured. It may be said that such may colour after a crotchet of their own; this may be—still are they in error, for the complexion of the human skin is of infinite variety, and therefore cannot be painted in mannerism, if truth be the object. In again speaking of colour it is admitted that it has description—language:—

"The human skin is the most difficult part of colouring, and of the most interest, for it is mankind that is to be painted. All other colours are but incidental, existing only in the surface of the object; but in those of the human race it would seem that nature intended to depict our very essence. The colour alone manifests one's course of life, age, personal character, different degrees of bodily power, and every inward working of the mind. But what sort of complexion is the most beautiful? It is vain to ask such a question of the African, the American, or the Chinese. Even in Europe inclinations differ respecting this point. A good colourist will give such tints as should belong to the various conditions and characters of his figures. The complexion of a princess will be fairer, more delicate, and more transparent than those of her attendants, and a country girl will have a browner skin and firmer flesh than the inhabitants of a city."

Hence is there in colour an acute ratiocination anything but mechanical.

There is in the mind of one individual more than another a disposition to admire works of Art, but this disposition, without instruction, is undiscerning and incapable of discrimination; for assuredly no one was ever born with the power of pronouncing accurately upon objects the production whereof is the result of tutored genius. It is said that, as a nation, we possess less taste for Fine Art than many others. It cannot also be said that a love of Art is not growing strong among us, nor can it be gainsaid that Art has made more rapid progress among us than with any other nation; but yet the highest walk of Art is not the boast of our school; not that its members are incapable of it—the fault lies with the bulk; as the character of the Dutch school has been the low farce of Art, so has that of ours been the pastoral and genteel comedy; and that it has not acquired a higher character, the fault rests with the bulk. In the general truth of the following observations we concur:—

"Fortunately for us in this country, we have never had a school, at least not any worthy of the name; we have, therefore, nothing to unlearn, but everything to learn, and necessity is the mother of invention. It is this which encourages reflecting men to hope that our turn will come, and that we may be able to decorate the council chamber of the nation with productions of British Art in a manner which shall not be unworthy of the building it is proposed to adorn, or of the nation which is inclined to sanction the undertaking. It is thought that the country which has numbered amongst her sons poets, orators, historians of the very first class, could produce artists of a corresponding merit, if only an opportunity were afforded for a display of their talent. That opportunity the country has afforded; it remains for them to prove that they are equal to it. Much depends upon beginning at the right end; but those who are determined to deserve success, most probably will command it."

The author says that it is an error to suppose that delusion, or, in other words, deception,—that is, the cheating us into a belief that the images represented are realities,—forms an object of the Fine Arts; he who invented and fostered such an idea was deluded, and deceived himself. Their productions ought to be immediately recognizable as representations, not of ordinary, but beautiful nature: they have no need of delusion; all they seek is to resemble truth and nature. When *Shylock* or *Othello* is made to talk in the sublimest strains of poetry, it is not for the purpose of persuading you that such is the real language of Jews and Moors. When an

accomplished actor personates *Lear* or *Richard* with the most eloquent gesticulation, studied attitudes, varied intonation of voice, and artful arrangement of the countenance, you never imagine that kings and princes really so act and speak. In like manner, no sculptor ever sought to persuade you that the marble he had fashioned was a living sentient being of flesh and blood. All he wants is not to destroy that tacit convention which exists between yourself and him, that his statue represents the objects he wishes, though what you look upon is only marble or bronze; and he succeeds in this end when he attributes to nature such properties as are conformable to our notions of her laws and established forms. But no compact can exist unless both the contracting parties read it in the same sense; they must clearly understand each other. It is, therefore, necessary that the taste of the observer should be on a par with that of the artist; if it lags behind, the artist must degrade his works to suit the capacity he addresses, and then adieu to improvement; if it should outstrip him, he cannot give satisfaction until he has raised himself to a level with the intelligence of his critics, and that effort produces great works and great masters.—In all this we entirely agree; but before we can teach a nation taste, they must be taught to see; and we must begin by teaching them that they do not see, and when this is effected much is already gained. Barry in one of his lectures, in observing upon this deficiency, says, in substance, that all early imitations are like those of children; they consist simply of as much as is seen by an untaught eye, and no more; nothing is observed in them that has not been before known and sought for; that "the contraction or extension of our sphere of vision," depending upon other acquisitions than merely ocular perception, declares the degree of ignorance or capability.

Great things are now expected in the world of Art, and every effort to enable the spectator to see them is commendable, but before he will profit, he must seriously set about the philosophy of vision.

**SWITZERLAND.** Drawn from Nature, and on Stone, by GEORGE BARNARD. Published by THOMAS MACLEAN.

This work consists of twenty-seven subjects, principally in the Bernese Oberland: the plates in size are imperial folio, and are executed with the latest improvements in lithography. The views are certainly some of the most striking in the country, and the utmost care seems to have been exercised to render them as like the localities as possible. The first plate gives a view of the Jungfrau, and the second, of the village of Grindlenwald, the glaciers of which are more accessible than any others in Switzerland. The village does not answer the usual acceptance of the term, the houses being scattered, and some even solitary. The lower glacier is here shown, which descends far below the line of perpetual snow. The Giesbach is a view of the waterfall of that name. It presents a very different aspect from many of the cascades in Switzerland, as bounding from rock to rock, amid luxuriant foliage. In 'Lucerne, from the Cathedral Bridge,' but little of the town is seen; the bridge occupying the right of the plate, the distance being composed of a few of the houses, backed by rising hills. The bridge is of wood, and covered. The roof of the bridge is hung with large pictures, the subjects of which are from Scripture; these are indifferently executed, but the light in which they are seen is insufficient to enable the traveller to distinguish their merits, if any they may possess. In a niche on the right of the bridge is a wood carving of our Saviour sinking beneath the weight of the cross. 'The Gros Boden on the Grimsel' is as wild a scene as can well be imagined. The principal object is a stone bridge thrown over an abyss, below which falls a foaming torrent. It is situated in a wilderness of rocks, among which it is difficult to conceive how the hand of man ever could have constructed a practicable route. It is the Aar that rushes beneath this rude arch, which is destitute of rail or parapet; the route over it leads to the Hospice of the Grimsel. 'The Glaciers of Grindlenwald' are the famous Mittenberg and Wetterhorn. Another view of Lucerne shows more of the town and its site. This plate is indeed beautiful, as showing the best and richest features of the country. 'The Road up the Grimsel' is a mere shelf on the mountain side, well known to

travellers, and very faithfully rendered by the artist. It is a fearful passage, as one false step hurls the voyager over the precipice. Following this is Schaffhausen, with its famous falls. The view is taken from the high ground in front, with the picturesque castle of Hafften on the opposite heights. The Rhine above the descent is about 300 feet broad. Two isolated pillars of rock, standing in the middle of the stream, divide the river into three shoots; and seen from behind they seem eaten away by the constant friction of the water. The river after its leaps forms a large semicircular bay, the stones of which are continually chafed by heaving billows.—'The Gemmi.' This is a fearful passage, and rendered by the artist with great ability. The pass of the Gemmi is certainly one of the most perilous in Switzerland. To a stranger, placed even at the very foot of the precipice, the rocks towering above him seem impracticable to human foot; but in 1736 a path was cut by some Tyrolese, which affords a safe communication between the Valais and the canton Berne during the greater part of the year. It consists in certain parts of a rude stair formed of rough unhewn stones piled one above another. In many places the way is but a shelf blasted and hewn out of the rock, just high enough for a man to pass through. It is carried up in zigzags, and after passing through a notch, seen nearly in the centre of the view, winds round the rock and re-appears at a higher stage, where a party on horseback is seen ascending it, after which it rounds the shoulder of the precipice, and disappears behind the rocks on the left of the drawing. Several of the upper terraces or zigzags project beyond and overhang those below them. 'Thun, from the churchyard terrace,' is a view of one of the most picturesque towns in Switzerland. The town is situated below the spectator, and the view is closed by the three heights—the Niesen, the Blumli Alp, and the Jungfrau; the last of which, in another plate—'The Jungfrau, from the Wengern Alp'—is exhibited in all its vast proportions. From this point, the brow of the ravine, 5350 feet above the sea level, and directly facing the mountain, it is best seen, as well as the avalanches descending from it. The precipice which forms the base of the mountain is channelled by grooves, down which the avalanches descend. These are first announced by a noise like thunder, after which the mass of ice is precipitated into the gulph below. The character of the mountain is well depicted in the plate; the foreground is broken by rough stones and trees, and managed in a manner to throw the mountain off to a distance.

'Descending the Wengern Alp—Withered Pine Forest.'—Byron describes this scene, and it remains much in the state he saw it; the branches and trunks are covered over with long white moss, which gives the trees a venerable and hoary appearance. The mountain torrents have frequently to be crossed, and if violent, it is with some difficulty that the horses are driven through—stumbling over the rocky bottom. After continued rain they really become formidable obstacles, and try the courage of all travellers. The fall of the Rossberg and Goldau is thus described:—

"The fall of the Rossberg was caused by an enormous upper stratum of rock and earth detaching itself and sliding forward upon the sloping rock into the valley below, which it filled up with its debris, destroying the villages and houses. In this view a sort of cliff may be distinguished stretching down the back of the mountain—this marks the line of the fracture; the intervening rocks, once as high as this rocky precipice, having fallen away. The height of this cliff may be about 100 feet, which will give some idea of the bulk of the entire slip. The church in the foreground has been built since the catastrophe, on the site of the village which was buried. The broken rocks in the foreground are portions of those which rolled down from the opposite mountain, whose top is four miles distant from the spot whence the view is taken.

"'Hospice of the Grimsel—Snow Storm.'—The Hospice of the Grimsel, situated more than 7000 feet above the sea level, an elevation at which even grass scarcely grows, and six miles distant from any other human habitation, is a characteristic specimen of the houses of refuge, built generally by the monks in ancient times, for the succour of travellers. For, although this dreary pass is buried to a depth of twenty feet in snow for six or seven months of the year, it is constantly traversed even in the depth of winter by the peasants of Hasli, who go to sell their cheese in the Valais. The house is constantly occupied by one man with several dogs, whose duty it is to detect the approach of wanderers and give them succour. The house, it will be seen, is of very massive construction,

propped up by stone buttresses, for which there is good reason, since the avalanches some times fall upon it; and so late as 1858, it was crushed beneath a mass of fallen snow which broke through the roof and floors, but luckily spared the solitary tenant. The approach of the snow-storm as depicted in this view, will explain one of the dangers to which Alpine travellers are subject; in an instant every object around you is hidden from view, and without a compass you have no means of ascertaining your direction. The party here represented are, therefore, hesitating to quit the vicinity of the hospice."

The last plate in the series is 'Life in the Oberland,' a plate composed of two interiors, and an out-door scene wherein peasants are engaged in the game of wrestling. In one of the interiors is seen the process of cheese making.

We have never seen any more faithful representation of the country than is afforded in these drawings.

**VIEWS ON THE NILE, FROM CAIRO TO THE SECOND CATARACT.** Drawn on Stone by GEORGE MOORE, from Sketches by OWEN JONES and JULES GOUNY. Published by GRAVES and WARMSLEY.

We can do little more than simply announce this valuable and deeply interesting work. It consists of 30 plates, executed in the most finished style of lithography, affording views in Cairo, of the Pyramids of Gizeh, the Great Temple of Karnak, the Statues of Memnon at Thebes, &c. &c., comprehending every modern and antique relique of interest throughout the district wherein the artists have prosecuted their researches.

Each plate is accompanied by letter-press by S. Birch, Esq., who, for the purpose of full description, has consulted every authority bearing upon the history of Egypt, as Champollion, Col. Howard Vyse, Sir Gardner Wilkinson, &c. &c. We shall avail ourselves of a future opportunity of noticing this work at the length which the subject and execution merit.

**CHRONOLOGICAL PICTURES OF ENGLISH HISTORY.** By JOHN GILBERT. Published by THOMAS VARTY.

These "pictures" are lithographed in compartments on imperial folio sized paper. They are characterised by infinite ability and spirit; indeed many of the groups are admirable in composition, and far beyond everything that has been hitherto attempted in the way of educational illustration, in the style of which we have long looked in vain for some improvement and artistic feeling. The second part represents events in the reigns of Richard, John, Henry III., Edward I., and Edward II., principal events in the lives of each forming the centre group in the respective sheets. The third part illustrates the reigns of Edward III., Richard II., Henry IV., Henry V., and Henry VI. The principal vignette in the reign of Edward III. shows the Black Prince waiting upon his royal captives; and in that of Richard II., the principal composition is John Ball addressing the insurgents at Blackheath in 1381; this is surrounded by portraits of Wycliffe, Wat Tyler, &c. &c. In the reign of Henry IV. the centre vignette is the 'Burning of the first English Martyr'; and in that of Henry V. of course the 'Battle of Agincourt.'

As a course of English history these plates must be very effective in impressing upon the mind the principal events in each reign, together with the names and characters of the most remarkable persons that figured in them. Of the execution it may again be observed that it is superior to anything that has ever been done with a view to elementary instruction, and must, we think, be received with consideration due to its merits.

#### TO CORRESPONDENTS.

**MANCHESTER ART-UNION.**—We understand that the Society have rescinded the law by which the committee selected the prizes—the choice is now left to the holders. The engraving presented to the subscribers this year is Simpson's copy of 'The Village Politicians.'

**ADMISSION TICKETS.**—The nature of the regulations show that tickets cannot be issued. Admission must be paid for until the exhibition be thrown open gratis.

**PROVINCIAL EXHIBITORS.**—We have continual inquiries with respect to the opening of the provincial exhibitions, from artists desirous of sending pictures to them; but it frequently happens that we know nothing of the arrangements until we receive the advertisement, and are therefore unable to afford early information which might be serviceable to the institution, and perhaps ultimately profitable to the artist.

**HISTORICAL GROUP in MAGNIFICENT ARMOUR.**—The PRINCE and PRINCESS in their splendid Cot.—The King of Prussia.—Commissioner Lin and his Consort, modelled expressly for this Exhibition, by Lamqua, of Canton, with the magnificent dresses worn by them. The gorgeous Coronation Robes of George IV., designed by himself at a cost of £18,000, with the room fitted up for the purpose, is acknowledged to be the most splendid sight ever seen by a British public.—Admittance, One Shilling.—Open from Eleven till dusk, and from Seven till Ten. Madame TUSSAUD and SONS, BAZAAR, BAKER-STREET, PORTMAN-SQUARE.—Open from Eleven till Ten.

**TO ARTISTS.**—W. WARRINER, Manufacturer of MINIATURE FRAMES, MATS, MOROCCO CASES, and GLASSES of every description, returns his most sincere thanks to those Artists who have so long patronised him; and begs to state, that, manufacturing the whole on the Premises, he is enabled to furnish them at lower prices than any other house in London, and with the greatest punctuality.  
No. 16, CHARLOTTE-STREET, FITZROY-SQUARE.

#### TO WATER COLOUR PAINTERS.

**SOLUBLE WAFER COLOURS.**—WINSOR and NEWTON beg to call the attention of the Profession to the advantages offered by these new WATER COLOURS. They are formed into flat Cakes, or Wafers, which, by wetting the under side, are made to adhere to the china palette, or sketch box. The diameter of these wafers is 1½ inch, and thus by presenting a broad surface for the action of the brush, a fulness of colour, so desirable where force is required, is readily obtained.

The method of preparing these Colours is also founded on an entirely new principle, by which the finer and more soluble particles of the colour only are employed, giving them the property of flowing well in the flat tints, and working with great freedom and richness in the darker touches.

Sold in Sets of 12 Colours, including Lake and Cobalt, 7s. per set; 18 Colours, ditto, 10s.; or single, at half the prices of the usual cake colours.

Japanned Boxes for the Wafer Colours, very thin and portable, to contain either 8, 10, 12, or 16 colours.

WINSOR and NEWTON, Artists' Colour Makers to Her Majesty and to H.R.H. Prince Albert.

Wholesale and retail, at 38, Rathbone-place, London. May be had also of the principal Booksellers and Artists' Colourmen in the provincial towns.

**WOLFF and SON'S CRETA LÆVIS, or PERMANENT DRAWING CHALK, in various colours.**

E. WOLFF and Son beg to apprise Artists and Amateurs that they have, by effecting great improvements in their CRETA LÆVIS, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

For sketching from nature, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The CRETA LÆVIS will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers', where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

#### INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF and SON beg to recommend their newly-invented SKETCHING PENCILS, or PERMANENT BLACK CHALKS.

B B Very Black, for foreground.

H B Middle Tint.

N Neutral Tint, for distance.

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

\* The method of using the Creta Lævis is taught by Mr. W. H. Kearney, member of the New Water-Colour Society.

Manufactory, 23, Church-street, Spitalfields.

**FRAMES FOR ART-UNION PRINTS.**—C. F. BIELEFELD begs to call the attention of Artists, Printers, &c., to his numerous assortment of PICTURE-FRAMES appropriate for the Art-Union and other Prints; manufactured in his improved Papier Mâché.

"The specimens of these frames, which we have seen, are certainly very beautiful."—Globe, Jan. 17, 1843.

"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

C. F. B. has just published a new Tariff of his Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street North, Strand.

#### REGISTERED 1843.

**TO ARTISTS AND AMATEURS.**—The **CARTOON PENCILS**, for the rapid production of Drawings and Designs in the style of the Old Masters.—The attention of the Profession, and all engaged in the delightful Art of Drawing, is particularly directed to the above Lead Pencils, which have been manufactured for the production of Designs, &c., in that bold and effective style so much desired by the present taste. For the execution of both large and minute work, they will be found to stand unrivalled. Their quality and peculiar form adapting them for the deepest and most delicate tints, while the absence of the numerous degrees (these pencils being only of four distinct shades) gives the essentials positively required, doing away with superfluity and confusion. Their peculiar feature is, they REQUIRE NO POINTING, but by cutting away the cedar, the means of producing Line and Shade of various breadths is immediately presented. The Lead of which these Pencils are manufactured is pure and genuine, and by extreme care and attention, every gritty particle is removed, which allows them to be used with that freedom and sweetness so essential for the production of fine drawings. In conclusion, they will be found a desideratum long required, and must, upon trial, obtain a decided preference and extensive patronage.

Manufactured and Sold by REEVES and SONS, at their Superfine Permanent Water Colour, and Black Lead Pencil Manufactory, 150, CHEAPSIDE, London.

DEGREES:—No. 1, Hard; 2, Hard and Black; 3, Soft; 4, Soft and Black.

## MILLER'S SILICA COLOURS.

Prepared for Oil and Water-Colour Painting of the under-mentioned tints, viz.:

Pale and Deep Yellow.	Pale and Deep Brown.
Pale and Deep Red.	Pale and Deep Green.
Pale and Deep Orange.	Pale and Deep Blue.
Pale and Deep Purple.	White and Half Tint.
Crimson and Olive.	Pale and Deep Grey.
Citrine and Russet.	Pale and Deep Black.

#### MILLER'S SILICA POWDER.

MILLER'S GLASS MEDIUM FOR OIL PAINTING.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

#### MILLER'S VENETIAN OIL.

MILLER'S VENETIAN VARNISH.

MILLER'S VENETIAN GROUND CANVASS.

MILLER'S COLOURS FOR PAINTING ON GLASS.

#### MILLER'S GLASS MEDIUM

FOR WATER-COLOUR PAINTING.

No. 1. For first colouring or laying on masses of colour.

No. 2. For second colouring, glazing, and finishing.

#### MILLER'S SKETCHING COLOURS.

MILLER'S ANTHYDOR.

FOR SKETCHING AND PAINTING.

MILLER'S MINIATURE TABLETS.

MILLER'S DRAWING PAPER.

Made of pure linen only, without undergoing any chemical process.

MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

**TO WATER-COLOUR PAINTERS.**—MILLER'S SKETCHING COLOURS.—These Colours are prepared for the purpose of enabling the Artist or Amateur to depict at once the transient effects of clouds, distances, &c., and as they require no previous preparation by the Artist when using them, will be found of indispensable utility in all instances where objects of an evanescent character are to be portrayed.

MILLER'S Artists' Colour Manufactory, 36, Long Acre, London.

Catalogues of all the Exhibitions may be had at this House free from charge.

**ARGUS LIFE ASSURANCE COMPANY,**  
39, Throgmorton-street, Bank.  
Empowered by special Act of Parliament, 5 and 6 Will. IV., c. 76.

Thomas Farncomb, Esq., Alderman, Chairman.

William Leaf, Esq., Deputy-Chairman.

William Banbury, Esq.

Edward Bates, Esq.

Thomas Camplin, Esq.

James Clift, Esq.

Rt. Hon. J. Humphrey, M.P.

Lord Mayor of London.

Physician—Dr. Jeaffreson, 2, Finsbury-square.

Surgeon—W. Coulson, Esq., 2, Frederick's-place, Old Jewry.

Consulting Actuary—Professor Hall, of King's College. Advantages of the Argus Life Assurance Company. Low Rates of Premiums.

In addition to the subscribed Capital of £300,000, the assured have the security of the Company's Income of nearly £60,000 per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20.....	£0 17 8.....	£0 19 1.....	£1 11 10
30.....	1 1 8.....	1 2 7.....	2 0 7
40.....	1 5 0.....	1 6 9.....	2 14 10
50.....	1 14 1.....	1 19 10.....	4 0 11
60.....	3 2 4.....	3 17 0.....	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the policy for life, or may be paid off at any time without notice.

In assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before two o'clock.

EDWARD BATES, Resident Director.

A liberal Commission to Solicitors and Agents.

**THE YORKSHIRE FIRE and LIFE INSURANCE COMPANY.** Established at York, 1824, and Empowered by Act of Parliament.  
Capital, £500,000.

#### PATRONS.

The Archbishop of York

Hon. E. R. Petre

Sir G. Strickland, Bt., M.P.

Sir Francis Lawley, Bart.

Actuary and Secretary—Mr. W. L. NEWMAN, York.

London Agent for the Life Department—Mr. EDWARD

HENWOOD, 46, Watling-street.

The attention of the Public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

Extract from the Table of Premiums for Insuring £100.

Age next birth-day.	Male.	Female.
10	£1 7 6	£1 5 4
30	2 5 0	1 19 9
50	4 1 9	3 13 3
70	10 0 4	9 7 6
80		15 12 10

Fire Insurances are also effected by this Company, on the most moderate terms. Farming Stock Insured without the Average Clause.

Prospectuses with the Rates of Premium and every information may be had at the Head Office in York, or of any of the Agents.

Agents are wanted in those Towns where no appointments have been made.

**HAMPTON COURT.**—BOARD and LODGING for Single Gentlemen, at the King's Arms Hotel, Hampton Court, adjoining the Royal Gardens, at TWO GUINEAS per week, including attendance of every description.

Permission is given to copy in the Palace, on application to Lord Lincoln, Chief Commissioner of Woods and Forests, Whitehall-place.

Price One Shilling.  
**THE ARTIST AND AMATEUR'S MAGAZINE**, a work devoted to the interests of Art and the cultivation of Taste, appears on the First of next Month with the addition of EIGHT PAGES, without an increase of price.  
 London: Longman and Co.

TO PAINTERS IN WATER COLOURS.

Just Published, price 1s.

**THE HAND-BOOK OF WATER COLOURS.**  
 By W. WINSOR and H. C. NEWTON,  
 Artists' Colourmen to the Queen.

A brief treatise on the properties of every pigment employed in water-colour painting, with some account of the sources from whence they are obtained.  
 Tilt and Bogue, Fleet-street.

**DOUGLAS JERROLD'S SHILLING ILLUMINATED MAGAZINE** for July will contain the following articles by the Editor:—

1. "The Order of Poverty."
2. "The Peerage of the Pen."
3. "A Gossip at the Revolver."
4. "The Button Holder."

And, "The Doomed Son," by Luke Roden, M.D.; "The Song of the Pauper," "The Boys of London," No. III.; "The Vagabond Boy," by Mark Lemon; "The Eville Earl, or the Lay of Saint Knockandryng," by Mourant the Monk; "Puseyism made Easy," by Libra; "Three Sonnets," by Thomas Wade; "The Husband's Friend," "Ellen Booth," "A Letter from the Statue of Shakspeare to the Right Hon. Sir J. Graham; "Passages in the Life of Theophilus Smudge;" "Song from the Persian," by Miss Louisa S. Costello; "A Quiet Street," by Sylvanus Swanquill; "The Ideal and Actual;" "The Philosophy of the Pistol," by Robert Postans; Review, &c. &c. The Illustrations by K. Meadows, Leech, Hine, Landells, &c.

**CARTOONS AT WESTMINSTER HALL, PICTURE GALLERIES, &c. &c.**

Just published, in fcp. 8vo.,

**THE HAND-BOOK OF TASTE; or, How to Observe Works of Art, especially Cartoons, Pictures, and Statues.** By FABIVS PICTOR.

"At a time when the public is invited to form and express an opinion upon a subject of new and great interest as regards the national arts, we are well pleased to see a volume like this. And we are the more pleased, because such publications are generally merely pitched to the tune of the moment, with an *ad captandum* title, and without a claim to notice even for the moment. But this hand-book is of a very superior character. Its views of the fine arts, their uses and their aims, are just and lofty; they are not for the season, but based upon eternal principles and everlasting truth. In short, the writer displays the right feeling and appreciation of the importance of his subject; and having read and reflected much upon it, has produced a most appropriate work, which cannot be too carefully considered."  
 —*Literary Gazette*, June 24, 1843.

London: Longman, Brown, Green, and Longmans.

**RECREATION-HAND-BOOK GUIDES,**

By FELIX SUMMERLY.

Now ready, price 3s. 6d.

**FELIX SUMMERLY'S HAND-BOOK** for the NATIONAL GALLERY; with Reminiscences of fifty of the most celebrated Pictures drawn expressly from the Originals by Messrs. John, James, and William Linnell. Other Editions 6d., 3d., and 1d.

BOOKS PUBLISHED BY WM. S. ORR and CO., London; and W. CURRY, Jun., and CO., Dublin.

**GREECE: Pictorial, Descriptive, and Historical.** By CHRISTOPHER WORDSWORTH, D.D. Illustrated by twenty-six highly-finished Line Engravings on Steel, after Fielding, Crewick, Cox, and Sargent; Two Maps of Greece, and upwards of Three Hundred and Fifty highly-finished Engravings, drawn on Wood by Harvey, Sargent, Meissolier, Paul Huet, Daubigny, Stanley, and Jacques.

Price One Guinea and a Half in Cloth, Thirty-eight Shillings plain morocco, and Forty-eight Shillings morocco elegant, both bound by Hayday.

In Monthly Numbers, Price 2s. 6d., each containing Four coloured Plates of rare, beautiful, or curious Plants.

**PAXTON'S MAGAZINE OF BOTANY,** and Register of Flowering Plants. The text comprises botanical descriptions of the Plants figured; the Time of their Introduction; the best Mode of Culture; and every other particular essential to their perfect growth. Every beautiful plant newly introduced worthy of notice and general cultivation, is described, and, if of sufficient importance, accurately figured.

Volumes I. to IX. are now published, and may be had, either in numbers, or bound in half morocco. For the accommodation of new subscribers, the price of Sets has been reduced to £12. A Re-issue of the Work was commenced on the 1st of January, to be continued Monthly, containing Eight Plates beautifully coloured, price 5s. for those who object to so large an outlay at once.

In one thick volume, royal 8vo., price 18s. cloth lettered, and illustrated with 27 etchings on Steel, by Mr. T. Landseer, 24s.

**CUVIER'S ANIMAL KINGDOM,** arranged according to its Organisation. By the late BARON CUVIER, Member of the French Academy, and of the Royal Societies of London, Berlin, Petersburg, &c.

The MAMMALIA, BIRDS, and REPTILES. By EDWARD BLYTH, author of various Papers on Natural History in the *Annalist* and *Magazine of Natural History*.

**THE FISHES.** By ROBERT MUDIE, author of "The British Naturalist," "Natural History of Birds," and the articles on Zoology in the *British Cyclopaedia*.

**THE MOLLUSCA.** By GEORGE JOHNSTON, M.D., Author of "A History of British Zoophytes;" Fellow of the Royal College of Surgeons; and Member of the Royal Med. Soc. of Edinburgh.

**THE CRUSTACEA and INSECTS.** By J. O. WESTWOOD, F.L.S., Author of "The Entomologist's Text-Book;" Secretary to the Ent. Soc. of London; and Hon. Mem. Soc. Nat. Hist. Quebec, Moscow, Lund, Lille, Mauritius, Ent. Soc. Paris, &c.

**PAUL AND VIRGINIA.** By BERNARDIN DE ST. PIERRE. With an original Life of the Author by Saint Beuve, and illustrated by upwards of Three Hundred and Thirty magnificent Engravings on Wood, by Johannot, François, and Meissonier, and engraved by the first Artists of France and England. Reduced price 15s., cloth lettered; 26s. plain morocco; and 32s. morocco elegant; both bound by Hayday.

In Foolscap 8vo., Sixth Edition, price 6s. 6d., cloth boards, gilt edges.

**WALKER'S MANLY EXERCISES.** Containing Instructions in Rowing, Sailing, Swimming, Riding, and Driving. To which are now added, for the first time, Instructions in Racing, Hunting, and Shooting. By "CRAVEN." With Sixty-four Plates by Howard, and numerous Engravings on Wood by Landseer and Sargent.

In medium 8vo., price 16s. cloth lettered,  
**PICTURES OF THE FRENCH.** A Series of Literary and Graphic Descriptions of French Character, by JULES JANIN, BALZAC, CORMENIN, and other Celebrated French Authors. The Drawings by Gavarni, H. Monnier, and Meissonier.

In small quarto, price 8s. 6d. cloth, gilt edges, second edition.

**DRAWING and PAINTING IN WATER COLOURS;** being a continuation to the Elements of Drawing and Perspective in Chambers's Educational Course. By the Author of that Treatise.

Price 5s. each, with coloured Vignette and Frontispiece,  
**FOUR VOLUMES on "MAN."** By ROBERT MUDIE. Uniform with "The Four Seasons," "The Heavens," &c.

I. PHYSICAL MAN.—Self-knowledge generally, and the knowledge, education, and use of the powers of observation and action.

II. INTELLECTUAL MAN.—Knowing, reasoning, and contriving, with their improvements and uses.

III. MORAL MAN.—Desires and motives, their nature and regulation, as affecting private conduct.

IV. SOCIAL MAN.—Duties of man to society, and of society to man—Public institutions, systems, and measures.

**THE EARTH;** its physical condition and most remarkable phenomena. By WILLIAM HIGGINS. A new edition, illustrated with many Engravings on Wood, and with Ten coloured Illustrations by Mr. Blunt. Price 8s. 6d. cloth lettered.

Just published, price on a sheet, 2s. 6d.; in case for the pocket, 3s. 6d.

**DARBY'S MAP OF LONDON,** with all the Railway and Steam-Boat Stations; together with a complete Index, comprising all the Streets, Squares, Lanes, Public Buildings, Offices of Institutions, Societies and Companies, Banks, Railway Stations, Steam-Boat Wharfs, &c. &c.  
 Darton and Clark, Holborn-hill.

On the 1st of August, with one hundred and thirty Engravings,

**A WEEK AT KILLARNEY.**  
 By Mr. and Mrs. S. C. HALL.

This volume, so richly illustrated with subjects, picturing the scenery, manners, and customs of the district surrounding the lakes, will be comprised in about 200 pages, of a size not inconvenient for the traveller.

Much beautiful scenery will be for the first time described, as the authors are now engaged in an especial visit for the purpose.

The approaching visit of the British Association to Cork will, it is expected, lead a considerable number of the members to Killarney.

By the aid of steam the magnificent scenery of these beautiful lakes is brought within two days' journey from London.

The volume will contain concise directions as to the various routes and modes of transit from London.

London: Published by Jeremiah How, 132, Fleet-street; and sold by John Cumming, Dublin; and may be had at the Victoria and Roche's Hotels, at Killarney, and of all the booksellers in Cork.

**BURNET'S ILLUSTRATED EDITION.**

Just published, in 4to., price £2 2s., in French boards, and on Royal Paper, with Proof Impressions of the Plates, price £4 4s., half morocco, gilt tops.

**SIR JOSHUA REYNOLDS'S DISCOURSES.**

Delivered to the Students of the Royal Academy. Illustrated by Explanatory Notes and Plates, by JOHN BURNET, F.R.S., Author of "Hints on Painting."

James Carpenter, Old Bond-street.

Just published, in royal 4to., price £1 5s. bound,

**RUSTIC ARCHITECTURE.—PICTURESQUE DECORATIONS OF RURAL BUILDINGS IN THE USE OF ROUGH WOOD, THATCH, &c.** Illustrated by Forty-two Drawings; consisting of Plans, Elevations, Sections, and Perspective Views; the Doors, Windows, Chimney Shafts, &c., drawn geometrically to a large scale; with descriptions and estimated costs. By T. J. RICAUTI, Architect.

"We have repeatedly and strongly recommended this elegant and useful work, and can safely say, that we think no gentleman who purchases it will be disappointed."—*London's Gardener's Magazine*.

James Carpenter, Old Bond-street.

Published in 4to., price £4 10s. in French boards; and on royal paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, price £7 7s.

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Forty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.
2. On COMPOSITION. Fifth Edition. Price 15s. in boards.
3. On LIGHT and SHADE. Fifth Edition. Price 15s. in boards.
4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Student in Art in the New Edition of the *Encyclopaedia Britannica*—See the article "Drawing."

James Carpenter, Old Bond-street.

**VALUABLE to LANDSCAPE DRAUGHTSMEN.—The Patent Lead six B DRAWING PENCIL,** remarkable for its depth of tone, richness of colour, and its freedom and firmness in working. Size of the Lead 1-6th of an inch in thickness.

Manufactured only by WINSOR and NEWTON, 38, RAILBONE-PLACE, LONDON.

Artists and the Trade are respectfully informed that they can have a sample one sent per post to any part of the Kingdom.

**ORNAMENTS for the DRAWING-ROOM, Library, and Dining-room,** in Italian Alabaster, Marble, Bronze, and Derbyshire Spar, consisting of Groups, Figures, Vases, Inkstands, Candlesticks, Tables, Obelisks, Watchstands, Paper-weights, &c., imported and manufactured by J. TENNANT (late Mawe), 149, STRAND.

Students in Geology, Mineralogy, or Conchology, can be supplied with an extensive assortment of Shells, Minerals, and Fossils, or with Elementary Collections, carefully arranged and described, at 2, 5, 10, 20, to 50 Guineas each; together with Geological Models, Maps, Hammers, Books, Blowpipes, &c., by J. TENNANT, Mineralogist to her Majesty, 149, Strand.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 56.

LONDON: AUGUST 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, July 28, 1843.

Her Majesty's Commissioners having, in the notice issued by them in April 1842, announced their intention of adopting means to enable them to decide on the qualifications of candidates for employment in fresco-painting; having thereupon invited artists to send in cartoons as specimens of their practice in design and composition, and being of opinion that the exhibition of such cartoons, which has taken place, has afforded satisfactory evidence of the ability of many artists in these respects; in pursuance of the plan proposed as aforesaid, now give notice:—

1. That whereas it has been ascertained that frescoes of moderate dimensions can be conveniently executed on portable frames composed of laths or other materia's, artists are invited to send specimens of such frescoes to be exhibited, for the purpose of assisting the Commissioners in the selection of persons to be employed in the decoration of portions of the Palace at Westminster.

2. The works are to be sent in the course of the first week in June 1844, to a place of exhibition hereafter to be appointed.

3. The number of specimens to be exhibited by each artist is limited to three. The size of the specimens is to be not less than three nor more than eight feet in their longest dimension. The figures or portions of figures, in at least one specimen by each exhibitor, are to be not less than the size of life. The subjects are left to the choice of the artists.

4. Each specimen is required to be composed of not less than two applications of the superficial mortar, so as to exhibit the skill of the artist in joining the work of two or more days.

5. Each exhibitor is at liberty to send a cartoon, as a specimen of his ability in design and composition, together with his specimen or specimens of fresco. The mode of execution, subjects, and dimensions of such cartoons are to be in accordance with the conditions specified on those points in the notice issued in April 1842.

6. No ornamental frames to the cartoons will be admissible, but each specimen in fresco may be surrounded by a flat frame or border, adorned with painted arabesques, which may be executed either by the artist himself or under his direction, and either in fresco or in any other method.

7. The competition hereby invited has for its object the execution of frescoes for the decoration of the Palace at Westminster. But whereas paintings executed in other methods may be free from a shining surface, and may therefore be considered by various artists to be fit for the decoration of walls, the Commissioners invite such artists to exhibit specimens of the methods in question, under the conditions before expressed, except that with regard to such specimens the dimensions are left to the choice of the exhibitors.

8. The claims of candidates for employment in oil-painting, and in other departments of the art besides historical painting, will be duly considered.

9. The invitation to send works for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

10. Artists who propose to exhibit are requested to signify their intention on or before the 15th of March, 1844, to the Secretary, who is empowered to give such further explanations as may be required relative to the terms of this and of the other notices issued by the Commissioners.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, July 28, 1843.

Her Majesty's Commissioners hereby give notice:—

1. That whereas ornamental pavements will be required for the halls and corridors of the Palace at Westminster, artists and others are invited to send designs for such pavements with specimens, suitable to the style of the Building, for the purpose of assisting the Commissioners in the selection of persons to be employed.

2. The designs and specimens are to be sent in the course of the first week in March 1844, to a place of exhibition hereafter to be appointed.

3. The specimens are not to exceed six feet in the longest dimension. The materials are left to the choice of the exhibitors.

4. The invitation to send designs for the proposed exhibition is confined to British subjects, including foreigners who may have resided ten years or upwards in the United Kingdom.

5. Artists and others who propose to exhibit are required to signify their intention to the Secretary on or before the 1st of January, 1844.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, July 28, 1843.

Her Majesty's Commissioners hereby give notice:—

1. That whereas ornamental metal-work for screens, railings, gates, &c., will be required in the Palace at Westminster, artists and others are invited to send designs for such works with specimens, suitable to the style of the Building, for the purpose of assisting the Commissioners in the selection of persons to be employed.

2. The designs and specimens are to be sent in the course of the first week in March 1844, to a place of exhibition hereafter to be appointed.

3. The materials and dimensions are left to the choice of the exhibitors.

4. The invitation to send designs and specimens for the proposed exhibition is confined to British subjects, including foreigners who may have resided ten years or upwards in the United Kingdom.

5. Artists and others who propose to exhibit, are required to signify their intention to the Secretary on or before the 1st of January, 1844.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## ROYAL COMMISSION OF FINE ARTS.

Whitehall, July 28, 1843.

Her Majesty's Commissioners hereby give notice:—

1. That whereas arabesque paintings and heraldic decorations for the enrichment of panels, friezes, &c., in colour and gold, will be required for the Palace at Westminster, artists and others are invited to send designs for such decorations, for the purpose of assisting the Commissioners in the selection of persons to be employed.

2. The designs are to be sent in the course of the first week in March 1844, to a place of exhibition hereafter to be appointed.

3. The designs may be executed in water-colours, in tempera, in oil, or in encaustic. The dimensions are left to the choice of the exhibitors.

4. The invitation to send designs for the proposed exhibition is confined to British subjects, including foreigners who may have resided ten years or upwards in the United Kingdom.

5. Artists and others who propose to exhibit are required to signify their intention to the Secretary on or before the 1st of January, 1844.

By command of the Commissioners,  
C. L. EASTLAKE, Secretary.

## ROYAL ACADEMY OF ARTS,

TRAFALGAR-SQUARE.—Notice is hereby given that the EXHIBITION of the ROYAL ACADEMY FINALLY CLOSED on the 29th instant. Admission (from Eight o'clock till Seven), One Shilling; Catalogue, One Shilling. HENRY HOWARD, R.A., Sec.

"Most capably executed drawings. The striking impression which this graphic painting produces upon all minds need not be indicated."—*Church of England Quar. Review.*

Size—Imperial folio, Price each Part, in a Wrapper, 7s. 6d., beautifully tinted—Every Part contains Five Plates, and each Plate illustrates a Reign.

TO BE COMPLETED IN SEVEN PARTS.—PART VI. NEARLY READY.

## VARTY'S GRAPHIC ILLUSTRATIONS OF ANIMALS;

SHOWING THEIR UTILITY TO MAN,

IN THEIR SERVICES DURING LIFE AND USES AFTER DEATH.

One Folio Volume, exhibiting nearly 60 Animals in upwards of 200 Illustrations, beautifully coloured, bound in cloth and lettered, £2 2s.; Single Prints, 2s.

"It is an Encyclopedia in itself."—*Literary Advertiser.*

LONDON: THOMAS VARTY, YORK HOUSE, 31, STRAND.

## ARGUS LIFE ASSURANCE COMPANY,

39, Throgmorton-street, Bank.  
Empowered by special Act of Parliament, 5 and 6 Will. IV., c. 76.

Thomas Farncomb, Esq., Alderman, Chairman.  
William Leaf, Esq., Deputy-Chairman.

William Banbury, Esq.,  
Edward Bates, Esq.,  
Thomas Camplin, Esq.,  
James Clift, Esq.,  
Rt. Hon. J. Humphrey, M.P.,  
Lord Mayor of London.

Physician—Dr. Jeaffreson, 2, Finsbury-square.  
Surgeon—W. Coulson, Esq., 2, Frederick's-place,  
Old Jewry.

Consulting Actuary—Professor Hall, of King's College.  
Advantages of the Argus Life Assurance Company.  
Low Rates of Premiums.

In addition to the subscribed Capital of £300,000, the assured have the security of the Company's Income of nearly £60,000 per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age. For One Year. For Seven Years. Whole Term.  
20.....£0 17 8.....£0 19 1.....£1 11 10  
30.....1 1 8.....1 2 7.....2 0 7  
40.....1 5 0.....1 6 9.....2 14 10  
50.....1 14 1.....1 19 10.....4 0 11  
60.....3 2 4.....3 17 0.....6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the policy for life, or may be paid off at any time without notice.

In assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before two o'clock.

EDWARD BATES, Resident Director.

A liberal Commission to Solicitors and Agents.

## THE YORKSHIRE FIRE and LIFE INSURANCE COMPANY.

Established at York, 1824, and Empowered by Act of Parliament.

Capital, £500,000.

PATRONS.

The Archbishop of York  
The Marquis of London-  
derry

Sir W. A. Inghilby, Bart.  
Sir Tatton Sykes, Bart.  
Sir E. M. Vavasour, Bart.  
Sir S. Crompton, Bt., M.P.  
The Archdeacon of York.  
Archdeacon of the East-  
Riding  
The Archdeacon of Clevel-  
land  
John Henry Lowther, Esq.,  
M.P.  
G. F. Barlow, Esq.  
Robert Cracroft, Esq.  
Robert Denison, Esq.  
Henry Preston, Esq.  
P. Saltmarsh, Esq.  
Marmaduke Wyvill, Esq.

Actuary and Secretary—Mr. W. L. NEWMAN, York.  
London Agent for the Life Department—Mr. EDWARD  
HENWOOD, 46, Watling-street.

The attention of the Public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

Extract from the Table of Premiums for Insuring £100.

Age next birth-day.	Male.	Female.
10	£1 7 6	£1 5 4
20	2 5 0	1 19 9
30	4 1 9	3 13 3
40	10 0 4	9 7 6
50		15 12 10

Fire Insurances are also effected by this Company, on the most moderate terms. Farming Stock Insured without the Average Clause.

Prospectuses with the Rates of Premium and every information may be had at the Head Office in York, or of any of the Agents.

Agents are wanted in those Towns where no appointments have been made.

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring), the Silica Colours will ever retain their freshness, transparency, and gem-like lustre, uninjured by atmospheric influence and unimpaired by time.

MILLER'S SILICA POWDER.

MILLER'S GLASS MEDIUM

FOR OIL PAINTING.

No. 1. For first and second painting.

No. 2. For third painting, finishing, and glazing.

MILLER'S VENETIAN OIL.

MILLER'S VENETIAN VARNISH.

MILLER'S VENETIAN GROUND CANVASS.

MILLER'S COLOURS FOR PAINTING ON GLASS.

MILLER'S GLASS MEDIUM

FOR WATER-COLOUR PAINTING.

No. 1. For first colouring or laying on masses of colour.

No. 2. For second colouring, glazing, and finishing.

MILLER'S SKETCHING COLOURS.

MILLER'S ANTHYDOR,

FOR SKETCHING AND PAINTING.

MILLER'S MINIATURE TABLETS.

MILLER'S DRAWING-PAPER,

Made of pure linen only, without undergoing any chemical process.

MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

## TO WATER-COLOUR PAINTERS.—

MILLER'S SKETCHING COLOURS.—These Colours are prepared for the purpose of enabling the Artist or Amateur to depict at once the transient effects of clouds, distances, &c., and as they require no previous preparation by the Artist when using them, will be found of indispensable utility in all instances where objects of an evanescent character are to be portrayed.

MANUFACTORY, 56, LONG ACRE, LONDON.

## PERMANENT DRAWING CHALK,

in various colours.

E. WOLFF and Son beg to apprise Artists and Amateurs that they have, by effecting great improvements in their CRETA LÆVIS, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

FOR SKETCHING FROM NATURE, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The CRETA LÆVIS will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers', where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF and Son beg to recommend their newly-invented SKETCHING PENCILS, or PERMANENT BLACK CHALKS.

B B Very Black, for foreground.

H B Middle Tint.

N Neutral Tint, for distance.

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmuted without fear of injury.

\* \* The method of using the Creta Lævis is taught by Mr. W. H. Kearney, member of the New Water-Colour Society.

Manufactory, 23, Church-street, Spitalfields.

THE CARTOONS.  
WESTMINSTER HALL.

It is glorious to see the new birth of British Art dated from the Old Hall at Westminster. The "ancient of days" has never been devoted to a nobler or a holier purpose!

Previous to commenting upon the worthiest exhibition that ever took place within the walls of any building in England, it will be well to remind the reader of the circumstances under which it has taken place, and the object contemplated:—

"The Commissioners appointed by the Queen for the purpose of inquiring first, whether, on the rebuilding of her Majesty's Palace at Westminster, wherein her Parliament is wont to assemble, advantage might not be taken of the opportunity thereby afforded of promoting and encouraging the Fine Arts in the United Kingdom; and, secondly, in what manner an object of so much importance might be most effectually promoted."

issued an advertisement in April last, intimating their desire to ascertain

"whether Fresco painting might be applied with advantage to the decoration of the Houses of Parliament."

With this view they gave notice—

"That three premiums of £300 each, three premiums of £200 each, and five premiums of £100 each, will be given to the artists who shall furnish cartoons which shall respectively be deemed worthy of one or other of the said premiums by judges to be appointed to decide on the relative merit of the works.

"The drawings are to be executed in chalk, or in charcoal, or in some similar material, but without colours. "The size of the drawings is to be not less than ten, nor more than fifteen feet in their longest dimension; the figures are to be not less than the size of life.

"Each artist is at liberty to select his subject from British History, or from the works of Spenser, Shakespeare, or Milton.

The time fixed for sending in the Cartoons was the first week in June, the place selected for their exhibition was Westminster Hall, and the judges appointed to award the prizes were—

THE MARQUIS OF LANSDOWNE,  
SIR ROBERT PEEL, Bart.,  
SAMUEL ROGERS, Esq.,  
SIR RICHARD WESTMACOTT,  
RICHARD COOK, Esq.,  
WILLIAM ETTY, Esq.

The Cartoons, submitted, were in number 140, and the judges awarded the eleven prizes to the following artists:—

## Premiums of £300

TO EDWARD ARMITAGE—subject, 'Cæsar's Invasion of Britain.'

TO GEORGE FREDERICK WATTS—subject, 'Character led in Triumph through the streets of Rome.'

TO CHARLES WEST COPE—subject, 'First Trial by Jury.'

## Premiums of £200

TO JOHN CALLCOTT HORSLEY—subject, 'St. Augustine preaching to Ethelbert and Bertha, his Christian Queen.'

TO JOHN Z. BELL—subject, 'The Cardinal Bouchier urging the Dowager Queen of Edward IV. to give up from Sanctuary the Duke of York.'

TO HENRY J. TOWNSEND—subject 'The Fight for the Beacon.'

## Premiums of £100

TO W. E. FROST—subject, 'Una alarmed by the Fauns and Satyrs.'

TO E. T. PARRIS—subject, 'Joseph of Arimathea converting the Britons.'

TO H. C. SELOUS—subject, 'Boadicea haranguing the Iceni.'

TO JOHN BRIDGES—subject, 'Alfred submitting his Code of Laws for the approval of the Witan.'

TO JOSEPH SEVERN—subject, 'Eleanor saves the Life of her Husband (afterwards Edward I.) by sucking the Poison from the wound in his arm.'

The judges, it should be observed, expressly state that "the order of names in each class is merely according to the order of the numbers in the catalogue," and they preface their award by this significant and most gratifying announcement:—

"The undersigned (the six judges), who have been appointed to decide on the relative merit of the drawings in the present exhibition, beg leave to state that, notwithstanding the inferiority of certain performances—a consequence unavoidable in an open competition, a great portion of the works are, in their opinion, highly creditable to the country. The undersigned are the more desirous to express this opinion, since the number of premiums offered, however liberal, was found to be by no means equal to the number of approved productions."

The judges were not content with merely thus intimating a wish; they have acted upon it; and have since bestowed REWARDS upon the following TEN artists—a reward of £100 to each:—

TO F. HOWARD—subject, 'Una coming to seek the assistance of Gloriana: an allegory of the Reformed Religion seeking the assistance of England.'

TO G. V. RIPPINGILLE—subject, 'The Seven Acts of Mercy. Una and the Red Cross Knight led by Mercy to the Hospital of the Seven Virtues.'

TO F. R. PICKERSGILL—subject, 'The Death of King Lear.'

TO SIR W. C. ROSS, R.A.—subject, 'The Angel Discouraging with Adam.'

TO HENRY HOWARD, R.A.—subject, 'Man beset by contending Passions.'

TO F. R. STEPHANOFF—subject, 'The Brothers releasing the Lady from the Enchanted Chair.'

TO JOHN GREEN WALLER—subject, 'The Brothers driving out Comus and his Rabble.'

TO W. C. THOMAS—subject, 'St. Augustine preaching to the Britons.'

TO MARSHALL CLAXTON—subject, 'Alfred in the disguise of a Harper in the Danish Camp.'

TO EDWARD CORBOULD—subject, 'The Plague of London, A.D. 1349.'

The one hundred and forty cartoons were publicly exhibited at Westminster Hall, by private view, on Saturday the 1st July; to visitors paying 1s. each, during the fortnight between Monday the 3rd July, and Monday the 17th; and to the

\* It is worthy of remark that, of the eleven prizes, ten appertain to history; the eleventh being a theme from Spenser. This is curious; it is no doubt the result of accident, but may lead artists to believe (what we shall not be sorry to see) that the finest subjects for Art are to be found in British history.

public generally, free of charge, after that day, excepting Saturdays, when the charge of 1s. is to be made upon each visitor. The exhibition thus arranged is now open.

So much for the facts connected with the first attempt of the British Government to foster British Art. Let us now see how it has been met, what have been its consequences, and what are likely to be its results.

In a word, the issue has been ENTIRELY SATISFACTORY—giving much at which to rejoice, and either literally nothing or next to nothing calculated to cause regret.

There appears to be but one opinion—the connoisseur, the critic, and the public all concurring—as to the high merit of the collection as a whole.

Of course, out of 140 works, contributed by about 120 artists, there will be many mediocre, and some so lamentably wretched as to excite wonder what conceivable obtuseness of intellect could have sent them to the Hall.\* But a very considerable proportion of them are good; several are of high merit; and a few are of very rare excellence.

This is saying much; for be it now and always remembered, that we are speaking of a first effort in a new style; let us only imagine what the next attempt will be, and then argue from what we may take for granted will be supplied to us by a third invitation, when both those who invite and those who are invited will have learned much from the experience they are now both working without. We say, without the least hesitation, that if the plan so worthily began be but effectually carried out, and arrangements are made to have a similar TRIAL annually, for the next six years (when the structure may be expected to be ready for the actual work), our British school will be by that time at the head of the schools of Europe. Even now we should not shame to place a selected forty of these cartoons beside forty pictures chosen from the Luxembourg or Versailles; although in these places they have been commissioned, painted, and paid for by the nation, and our artists produced their works with very little certainty, and with many heavy misgivings, as to the receipt of any reward for hard labour and great sacrifices.

For ourselves, although our hopes from English artists have been always strong, and our estimate of what they have achieved proportionably high, we had little expectation of examining a collection of which the country may be so justly proud. It far surpasses our most sanguine hopes; and we believe this to be the general impression.

We congratulate then, first, her most Gracious Majesty, who will rejoice to find that "the commission" was not appointed in vain; next, the commissioners, whose arrangements have been wisely, judiciously, and liberally made; next, the artists, who have established their right to the high standing for which "the profession" has been long uselessly contending; and next, the country, for which a new glory may be said to have been obtained. Above all, we congratulate Prince Albert, whose high hopes have not been disappointed; to his Royal Highness the triumph is a signal one; for our readers must remember how, when first promulgated, the plan of frescoes was laughed at, as a German idea that never could be worked out in England.

Before we proceed to notice the works exhibited, some remarks appear to be necessary. If the judges, by their award, have not given universal satisfaction, they have gone very near to do it. No one suspects them to have been influenced by other than the purest motives; and those who may, in two or three instances, differ from them as to the estimates they form, willingly allow for variations of taste, and feel assured that, all things considered, the trial could

\* Perhaps it was necessary that, on this occasion, no offered work should have been rejected. But, we trust, when a case of the kind again occurs, a wholesome discretion will be exercised over the works that are to form a public exhibition.

not have terminated in a more satisfactory manner. We refer to the ELEVEN PRIZES,—for in bestowing subsequent awards there can be no doubt other considerations than those of actual merit weighed with the judges.\* Perhaps these considerations ought to have had weight: we cannot say; but we regret, for the sake of the Royal Academy, that it was thought desirable to include two of its members in the NEW LIST; if they were not entitled to partake of the feast, they should not have been made content with the scraps left at the banquet. It will do far more harm, in the public mind, to have the fountain of honour and the great teacher of the Art considered by an afterthought, than if its advances had been rejected altogether; and it is sufficiently notorious, that the failure of the members of the Royal Academy to obtain a single prize has been a subject of triumph to its adversaries, who point to the fact as affording conclusive evidence of the alleged inferiority of the body. Nothing can be more unjust, or indeed more false and malicious. Of the Royal Academy, those who competed were just those who ought, for their own sakes and for the honour of the Institution, to have attempted nothing of the kind. It is, unquestionably, to be lamented as an evil that will operate to the disadvantage of the Royal Academy for many years to come, that the members who were capable of producing cartoons, and might have secured prizes, shrunk from the contest. It was understood, long ago, that the great national effort for the promotion of the Fine Arts in Great Britain was to have no aid from the Royal Academy. From time to time we have presumed to warn the Royal Academy of the risk they were incurring: they have abided the issue, and they must take the consequences. We have no desire to make this article offensive, and therefore do not speculate upon what those consequences may be; but, assuredly, the public will put its own construction upon the fact, that no prize, large or small, was awarded to any member of the Royal Academy.†

We shall have frequent occasion to consider the mighty influences which this cartoon competition may have upon the Arts and the artists of our country; and to consider also another very startling fact—that a majority of THE PRIZE-GAINERS WERE MADE KNOWN TO US FOR THE FIRST TIME IN WESTMINSTER HALL!

\*It was perhaps not unreasonable to expect that consideration would be given to other claims than those of actual merit; but if this principle did guide the judges, we humbly submit that they should have bestowed a thought upon a veteran artist, who in contributing two cartoons made a great effort and a large sacrifice, and whose works are certainly not inferior to some of those to which awards of £100 have been made. We are by no means a partisan of Mr. Haydon's, nor can we be classed among the admirers of his paintings; but we cannot help regretting that upon this occasion there was no memory of the bold battle he has been fighting all his life for HIGH ART—to bring about the very consummation we have lived to see. He may have fought occasionally with awkward and unseemly weapons, and defeated his own purpose by the mode in which he went to work; but assuredly he has done more than any living painter to arouse the public mind, and to prepare it for the wonderful change we have now seen effectually wrought. It is, therefore, greatly to be lamented that that which ought to have been remembered should have been forgotten. We lament it upon all accounts; lately we believe Mr. Haydon was disposed to use the pencil more and the pen less, and to abandon a perpetual snarling at success, because it was not success accomplished in the best way. We greatly fear that his animosity will be stirred up by this exclusion (an exclusion which we do certainly say ought not to have occurred). As a proof that it will be so, or has been so, we copy the following advertisement from the *Times* of Friday:—

"CARTOONS, WESTMINSTER HALL.—The people are respectfully required to look at Cartoon 23 ('The Curse'), and 118 ('Edward the Black Prince'), and are appealed to if Mr. Haydon has been justly treated, to have no reward."

† We believe no prize has been obtained by a member of any society; neither the Society of British Artists, nor the Societies of Painters in Water Colours. It is worthy of remark that among the eleven prize-gainers there are four members of the Etching Club—Cope, Townsend, Severn, and Horsley.

This exhibition must go far to set at rest the questioned ability of British artists to deal with that department of the profession to which they have been deemed unequal by the illiberal abroad and the ignorant at home. We remember that when the question of manufacturing designs was before the House of Commons it was seriously stated that there was among us a want of intellectual qualification for the production of designs; the same, up to the last hour before the opening of Westminster Hall, has been insisted on with regard to their powers in the highest walk of Art. But to this senseless and impertinent detraction, their reply has been most triumphant. We long ago expressed conviction that many of our most distinguished painters would not compete. Had they contributed to the catalogue, the exhibition would have been such as, under all circumstances, no other country could have surpassed; as it is, there are passages of Art which, glorified by the *prestige* of some great name, would be the admiration of all beholders.

And be it remembered many of these beautiful productions are the works of persons who never before attempted a cartoon, who knew not whether they were to draw upon paper or cloth; and such being their measure of success in dealing with materials so new, what might not be expected from a second effort, after having benefited by experience? Those cartoons are the best which are free from what is considered the classic manner; this is enough to show that, on each mind pursuing nature in its own way, originality must be the result. The weakness is with ourselves, not the want of variety in nature. If it can be satisfactorily shown that Raffaele and the other *magistes* of the Italian schools have left nothing undone—that they were so far the favourites of Nature and Art that they have effected all that Nature can accomplish and Art display—then are the Germans right in aiming at a transcript from their style, and then would the best decorations that could embellish the walls of the Houses of Parliament be copies from their works. This would be to show, on the one hand, that the entire circle of human nature was bound up in Greek and Italian nature; and on the other, demonstrate the truth of the sage theory of our amateurs, that Greek and Italian artists possessed some faculty of which all the rest of the world were deficient.

In reviewing the collected works, we shall pass over those concerning which we can say nothing either agreeable to the producer or useful to the public. We shall give the names of the artists, because although, very properly, they are exhibited without fixed ownership, the producers of all are generally known. We may observe, however, that, in giving them to the respective artists, we trust to the statements communicated to us; for although pretty familiar with the style of each, and not very likely to attribute pictures to wrong painters, we were completely astray in our guesses at the authorship of several of the cartoons. A few are not to be mistaken; but in a vast number of cases it would be impossible to trace the style of the painter in the cartoon. We look upon this as of great importance, for if the fact be really so, there can have been but little "mannerism."

It is but just to observe, what indeed is acknowledged by all with whom we have conversed, that to the enlightened views of PRINCE ALBERT this country is indebted—mainly, perhaps it would not be too much to say solely—for this mode of instructing and refining the mass of the people; and it must be peculiarly gratifying to the Queen to find that this most legitimate and rational activity of the husband of her choice promises to become a powerful instrument of good. The office of the Commissioners on the Fine Arts is comparatively restricted, being confined to the decoration of a single building; but the success of the experiment which they have had the courage to make will not be lost on future occasions. It will now no longer be

doubted that the Arts can have a moral influence. It will now no longer be a question whether or not the people can take an interest in works of Art. The artists themselves will feel their power, and from decorators of boudoirs will be elevated to responsible teachers of taste and morals, and it may be to public benefactors. An opportunity will again be afforded next year for the display of their efforts in this noble calling; but we trust that, on that occasion, when it appears there will be no other rewards than the selection of some artists for the works required (an arrangement, by the way, upon which we hold ourselves free to comment), the Committee of Arrangement will be directed to exclude such absurdly-inefficient performances as some of those now (happily not prominent) in Westminster Hall. It is, we repeat, misplaced indulgence to offer such abortive attempts to observation, and it is cruel to suffer uneducated eyes to be vitiated.

Penny catalogues have been provided, but the poorest people prefer the sixpenny, or pirated threepenny ones, and examine the drawings attentively, while they occasionally refer to the descriptions and quotations. The catalogue not being voluminous, there was no necessity for curtailing quotations which related directly to the subject; and it has been observed that, in addition to the useful purpose of illustrating the Cartoons, these catalogues are the means of introducing thousands of readers for the first time to the language of some of our best poets.

In consequence of the mode of arrangement of the Cartoons, the historical portion constitutes again a pictorial illustration of many important events recorded by the writers who are quoted, and many a reader is stimulated to inquire further. The influence on general taste is more remote but not less certain. The public at large, and perhaps we may add cultivated observers, require the aid of association and an acquaintance with the story of a picture to invite their attention in the first instance; the contemplation of it as a work of Art is a different and a somewhat later operation of the mind; but the attention being once invited, the eye is gradually educated, and thus, in the instance of the uneducated observer, the habit of comparing degrees of excellence, and of discerning the elements of beauty in composition and forms, is by degrees acquired. We have, therefore, in this exhibition, an instance of the Arts doing good directly and indirectly, and on a large scale; and our legislators may be convinced of the possibility of their salutary influence by the success even of their first experiment.

No. 8. \* \* \* \* RIVIERE. A nameless subject, and a difficult one; but, nevertheless, treated with much ability. It is from "Paradise Regained."

"Heaven open'd, and in likeness of a dove  
The spirit descended."

The figures are a wreath of angels, who derive too much weight and substance from so much of the cartoon being left blank. The opening of Heaven might have been more definitely shown: as far as it has been carried it is meritorious, but we consider it but a fragment of the idea to be gathered from the lines.

No. 10. 'Una alarmed by the Fauns and Satyrs,' W. E. FROST. This, as one of the prizes of the third class, is worthy its distinction. The fauns and satyrs, alarmed at the cries of Una overtaken by Sansloy, quit their sports near the bower of Sylvanus, to ascertain the cause of the shrieks. On their appearance the paynim departs, and they pay their rude homage to Una, who is terrified by their glad demonstrations of devotion. In the subject it will be understood there is nothing that could be turned to the account of the sublime. The force of the verse goes to describe the wild emotions to which the wood-born people have given themselves up. The main character, therefore, of the work is

movement, which has been effectively made out. We find Una circumstanced according to the lines:—

"The doubtful damsell dare not yet committ  
Her single person to their barbarous truth;  
But still 'twixt feare and hope amazed does sitt,  
Late learn'd what harm to hasty trust ensu'th."

She is therefore seated on the ground, and, following the lines,

"all prostrate upon the lowly playne,  
Doe kiss her feete, and fawne on her with count'nance  
fayne"

One of the satyrs is on the ground near her, as if to kiss her feet, but the purpose is not sufficiently apparent; therefore the cartoon would have been improved by the omission of the allusion thus managed. The intellectual point of the composition is the contrast between Una and the satyrs, which ought to have been more effectively widened by a higher degree of refinement thrown into the features of the former; a consideration made imperative by the manner of representing the latter, who have been studied, not according to the somewhat loose description of Spenser, but after the finished model of the 'Dancing Faun.'

No. 11. 'Una coming to seek the assistance of Gloriana: an Allegory of the Reformed Religion seeking the assistance of England,' F. HOWARD. The subject is found in the letter written by Spenser to Raleigh, in order to describe the point of the poem. The scene is the court of the Queen of the Fairies, wherat a "tall, clownish young man" presents himself, to solicit the achievement of any adventure which during the feast might happen; and this being granted, he seats himself upon the floor to abide his time. Shortly afterwards appears the lady in mourning, mounted on a white ass, soliciting the aid of the Faerie Queene. The Faerie Queene is presented in the likeness of Queen Victoria, who occupies the centre, having on her left the lady, and the dwarf leading the destrier for the appointed knight. For the number of figures here introduced there is want of space: we cannot conceive so many persons, together with animals, conveniently arranged within so limited an area—thus are lost the state and ceremony which should characterise such a scene. The drawing is generally good, and roundness is well described without much effort; but there is a want of force and decision, which leaves the whole very ill defined.

No. 13. 'The Seven Acts of Mercy,' E. V. RYFINGILLE. The subject is from the "Faerie Queene," book I., canto 10. Mercy leading Una and the Redcrosse Knight to the Hospital of the Seven Virtues. This is designed as a compliment to the Queen, whose portrait, very successfully drawn, is given to one of the principal figures. We question, however, the good taste of the introduction. The composition may be said to be in parts, the whole forming a beautiful epitome of the description in the text, wherein is portrayed each charity individually. Mercy, Una, and St. George are received by the principal of the hospital, who, on his knee, acknowledges Mercy its patroness. The numerous other figures are skilfully distributed and grouped, each being, endowed with a powerful intelligence, contributing its quota to the sphere in which it is placed. The chief hospitaller and his assistants are habited in the monastic dress: the heads of some of these figures are admirably conceived. The equipment of the Redcrosse Knight might be objected to, if the allusion to King Arthur were to be set up as determining chronology; but the allegory points to the armour of the Christian described by St. Paul in his Epistle to the Ephesians—"Wherefore take unto you the whole armour of God, that ye may be able to withstand in the evil day, and, having done all, to stand. Stand, therefore, having your loins girt about with truth, and having on the breastplate of righteousness." Thus we know not how the spirit of the subject could have been better sustained in this figure.

No. 16. 'The Death of Lear,' F. R. PICKERING. To the author of this cartoon £100 have been

awarded on the second distribution, and most justly, as its merits are of a high class. It is distinguished by great breadth and power of execution; the chiaroscuro is commonplace, but it is the best style of commonplace. The costume has been carefully studied; it is appropriate, and severely shorn of the unmeaning embellishments so highly valued among artists of the present time. It may be said, however, of Lear that he is not sufficiently enfeebled: the eyes seem but closed in sleep; the features are yet full, and of a healthful firmness, bespeaking within a vigour, freshness, and decision of intellect yet equal to mighty purpose, in the government of a kingdom. He is here assuredly dead too soon, and he looks too well in death.

No. 20. 'King John,' S. HART. R.A. The prominent figures are Constance, King Philip, the Bastard, Austria, &c. Constance is suing reproachfully to King Philip, while the two last are engaged aside; a division which is fatal to the unity of purpose which should prevail among the prime components. The figures stand forward from a background, so uncompromisingly white as to throw over the whole an indescribable tone of flatness and insipidity. The drawing is faulty, especially that of the Bastard, who stands with his back to the spectator. It is, moreover, an utter departure from probability, for the Bastard is actually collaring Austria.

No. 23. 'Tempest,' Act I, Scene I, BOSTOCK. Ferdinand approaching the cave of Prospero, spirited onward by Ariel. The figures have been most carefully elaborated, but the scene is so alphabetically rendered as to turn into prose the mystic conceit of the Swan of Avon.

No. 25. 'Scene from Shakespeare's King Lear,' Act I, Scene 4, WRIGHT. There is much to praise in the grouping here, although managed upon a principle so often exercised as to become monotonous; the effect, however, is feeble, so much so (if the intention go not beyond this) as to create an apprehension for the result, if the composition were to be so painted. We cannot pass the cartoon without allusion to the costume. The paraphernalia of feathers, ermine, and their accompaniments, are not proper to scenes from Lear. Much of this is copied from the stage, generally the very worst example to follow: it is impossible that a man in any profession can stand still; if he be not continually searching and inquiring for himself, he is assuredly losing ground.

No. 26. 'The Death of King Lear,' POOLE.

"Look on her, look—her lips—  
Look there, look there!" (He dies.)

The eye is fascinated by a crown upon a death's head, nor can it escape the dread mockery, seek relief in what part soever of the composition it may. We learn here that Lear has long been virtually dead, before this his physical decease. What were to him the ills of life, have made their way roughly over his features, for death has not yet had time to deal so hardly with them. So fraught with horror is this figure, that it seems to have been dug from the grave, to fulfil a part in giving a lesson of mortification to presumptuous humanity. By his rigid severity and denial, the artist refers us to his character, by which alone he is content to be tried. Here, indeed, is the vast force of the work: he has striven for originality, and has been so successful, that, amid vicious and reckless imitation, he has produced a work which achieves for him a yet higher position in the ranks of his profession. He seeks his sublime in the essence of the horrible; but in his manner of relation there are qualities independent of his keen apprehension of this, which will turn to profitable account after he has assured himself that the least agreeable effect of Art is to shudder under its power.

No. 27. 'Constance in the Tent of the French King,' CROWLEY. We would gladly have seen the diligent study and power of drawing shown in this composition exerted on a better theme;

for to the spectator the subject is mute, treat it as you may: his memory must be quickened by a long quotation, and then he must compare the passage and the ideal embodiment; moreover, it is not of importance sufficient for an occasion of this kind. The last remark will apply to others; but we make it directly in reference to this, because the work exhibits powers of a high order. Constance is on the ground in a position by no means graceful; now this is not absolute, since there is a discretion afforded by the words,

"here I and sorrow sit,  
Here is my throne; bid kings bow to it."

Salisbury is a middle age reality, and the kings without the tent form an admirable passage.

No. 31. 'The Angel Raphael discoursing with Adam,' Sir W. Ross, R.A. The three figures are seated in the bower, the pair side by side, and opposite to the

"sociable spirit that de'gued  
To travel with Tobias."

The innocent state of the parents of mankind has never been more felicitously alluded to than here. The angel is robed, and, maugre a degree of stiffness, there is yet much grandeur in the figure, which is opposed to the undraped figures of Adam and Eve, and, aided by the feeling thrown into them, points attention at once to the happy state of which the poet so often and so emphatically speaks. Adam is seated, intent upon the argument of his angel visitant; Eve is toward the spectator, and fondling a lamb. Eve has been rarely more happily rendered. It is an exquisite figure of a perfect woman.

No. 33. 'The Curse,' B. R. HAYDON. The judgment of Adam and Eve in Paradise is here represented. The "Son Viceragent" is seated on the right; Adam, Eve, and the Serpent occupy the centre; and on the left is seated Satan. With respect to the presence of Satan, the author seems to have travelled beyond the text, unless we are to consider the composition particularly to typify Heaven, Earth, and Hell; and here at once closes to the mind the vast range which has been opened to it by another treatment of the subject. The accompanying extract is—

"But whom send I to judge them, whom but thee,  
Viceragent Son? To thee I have transferred  
All judgments, whether in Heaven, in earth, or hell."  
The circumstances of the right hand portion of the cartoon declare that part to have been wrought out from the judgment, and passages in connexion with it; but we find there nothing to suggest the introduction of Satan, a method of treatment which strips the cartoon of the virtue it possesses as derived from Milton, by wrapping the subject in allegory. It is sufficiently difficult to work up to his imagery with any degree of success; to allegorize upon his verse seems to say it is not sufficiently rich. Of the detail of the work we could not limit ourselves to say little, and to speak of it at great length we have not space.

No. 34. 'Samson Agonistes,' T. LANDSEER.

"Delilah. Let me approach, at least, and touch thy hand."

Samson. At distance—I forgive thee—go with that."

Samson is here very prominent, coming forward in strong relief against the sky. He is seated, surrounded by his friends; Delilah standing near him. He is colossal in the flesh, a treatment which has little to do with the beautiful; it is enough that we believe him a strong man, without this vulgar record of his strength. We could, without this striking contrast between him and those around him, believe him equal to bear off the gates of Gaza; and without this, that enough of strength was left him to destroy the edifice in which his enemies were assembled. Delilah has all the beauty ascribed to her by Samson, but none of the character which a true estimation of Eastern impersonation ought to give. She is somewhat too sylph-like: there is about her nothing of the appearance of the "Philistian matron."

No. 36. GEDDES. The same subject exhibited in a cartoon in the centre screen, whereon its position is most unfavourable for examination, in consequence of the embarrassment arising from

cross lights. Samson is, of course, the principal figure; but his importance is much diminished by what seems the trunk of a palm tree rising near him. A group on the right appears extremely well put together, and effectively finished.

No. 37. 'Satan Vanquished,' ARCHER. A passage in the war waged by Michael and Gabriel, and their host, against Satan and the powers of hell, as related by Raphael to Adam. Satan is borne off on the shields of his followers, on whose part great effort is necessary to support him: this is a description of solidity and weight directly relative to human substance, and little consonant with the idea conveyed by the words:—

"the ethereal substance clos'd,  
Not long divisible."

Milton's description of the battles of the angels abounds with immediate deductions from human warfare; we cannot, therefore, censure the artist because he is weak on the same side as the poet—"Thus measuring things in heaven by things on earth." A main defect in the cartoon is its deficiency of movement; the wound of Satan could not thus have stayed the efforts of both sides. Another striking error is, that in general appearance and equipment the whole, on superficial examination, look much like some of the tribes of Gauls or Britons.

No. 40. 'Third Part of King Henry VI., Act 2, Scene 5,' WELD TAYLOR. Descriptive of the horrors of civil war, as in that part of the play enacted by the son who had slain his father, and the father who had slain his son. The selection of the subject is judicious; but it is one extremely difficult to deal with in any manner sufficient to elucidate the argument.

No. 41. 'Samson in Captivity,' BURTON.

Chorus. — "Can this be he,  
That heroic, that renowned  
Irresistible Samson?"

Samson is bowed down in affliction, while two figures stand wondering at and lamenting his fallen state. The effect of the work is admirable throughout, and Samson is characterised with a feeling corresponding with that of the verse, but about the figures, although put in with force and breadth, there is too much both of *la jeune France* and *la Grece antique*.

No. 45. 'Man beset by contending Passions,' HOWARD, R.A. The best of the productions of this gentleman we have of late seen; it is light and sketchy, the material (sized cloth) on which it is executed being highly favourable to its free style; circumstances, however, incline us to think that in colour and finish many of its best qualities would pass away. Man, the principal figure, is urged on, we are told in the catalogue, by Pride, Ambition, Anger; restrained by Love and Pity; pursued by Grief, Hate, Envy, Revenge, Fear; buoyed up by Hope; chained to the earth by Despair; Reason overthrown; Horror in the midst. All this is tolerably legible—a high merit in works of this class; but some of the impersonations are untrue, as, for instance, Reason, whose character is that of an evil passion.

No. 48. 'Samson bringing down the House upon the Philistines,' BALL. Samson is between the pillars, which are yielding to his mighty efforts. One of the Philistines he has cast on the floor before him, an incident detracting from the force of the composition, which is intended to be centred in Samson; in a work like this one additional figure cannot aid the story.

No. 49. 'Lines written at a solemn Music,' O'NEIL. The lines are among Milton's Odes, and the impersonations are "Voice and Verse," joining their "passion'd accord"—

"Around the sapphire-colour'd throne,  
To him who sits thereon,  
With saintly shout and solemn jubilee."

If the design and treatment of this cartoon were entirely original, it would place the author in a high rank among the professors of sacred poetry; it is, however, in the manner of the Italian frescoes, yet displays, nevertheless, a fine apprehension of all that is elevated in feeling and sentiment.

No. 51. \* \* \* A. E. CHALON, R.A. The Hesperides, according to the epilogue to *Comus*, "singing about the golden tree." In these three figures the flesh is substituted for the spirit.

No. 53. 'The Expulsion of Sin and Rebellion,' STEVENS. A number of headlong figures, grouped circularly, as if designed for a bas-relief; the *vis cadendi* is, however, wanting; and this and much else has been sacrificed to neatness of arrangement. The features are deficient of all expression of pain, confusion, defeat, and consequent infernal ire and disappointment; as opposed to this the glory of the Messiah pursuing is insufficiently upheld.

No. 55. 'The Expulsion out of Paradise,' H. CORBOULD. Nothing new is attempted. Adam is supporting Eve in their reluctant departure from the happy seat. The expelling angel is behind them. Milton's idea of the expulsion was by no means so tangible as this. The returning cherubim are described

—"Gliding meteorous, as evening mist  
Risen from a river o'er the marsh glides,  
And gathers ground fast at the labourers heel  
Homeward returning."

Eve is given up to grief; but the expression of Adam has in it a somewhat of resistance. The drawing of the former has many beauties; but the head is like some of Reynolds's female portraits. The drawing of the male figure is objectionable.

No. 57. 'Sabrina releasing the Lady,' J. WOOD. The manner and composition resemble very much those of a design for a bas-relief—the drapery, particularly that of Sabrina, has this appearance. The costume of the brothers sorts ill with the classic tone of the other figures, and their heads are portraits, unmodified from every day studies; the very measure of the verse ought to have suggested something different.

No. 58. 'Satan discovered in the Garden of Eden,' CORBOULD, jun. Satan has started up in his own form; Adam and Eve are asleep on the ground, and the angels occupy a position on the left. The figures are made out with all care for elegance of form and action—the head of one of the angels resembles that of the 'Paris' of Canova.

No. 60. 'The Brothers releasing the Lady from the Enchanted Chair,' STEPHANOFF. This cartoon is very agreeably composed, and distinguished by much sweetness of manner, but the faces of the brothers, the lady, and the shepherd, appear to have been drawn from one model, and that a female one; a circumstance which has thrown an expression so feminine into the faces of the two first that it might be thought they were rather playing, than in earnest with their weapons. In respect of expression the work is deficient, but it is otherwise graced by many valuable points. This is one of the works to which £100 have been awarded.

No. 63. 'The Brothers driving out Comus and his Rabble,' WALLER. There is much grace in the management of the chiaroscuro, but with respect to the life of the work the brothers are here as much too heavy and loutish as we find them elsewhere too feminine. They are rushing down steps in pursuit of the band of Comus with a very improbable precipitation. On the right of the composition lies one of the latter with a head very similar to one worn by one of Michael Angelo's demoniacal impersonations.

No. 64. 'Cæsar's first Invasion of Britain,' EDWARD ARMITAGE. To the author of this work, as one of the first-class prizes, three hundred pounds were awarded. It is obvious, at the first glance, that the mind has been well strung up to the subject during its execution, and even to its completion. The drawing has all the square and decided character of the modern French school, and is well adapted to give force to such a scene; but it cannot be doubted that in colour it would lose much of its positive effect. The main feature of the cartoon is, as it should be, violent action, described by lines crossing each other at all angles; the movement is through-

out the whole extremely well sustained. The position of Cæsar himself is, however, a very questionable one, for he appears circumstanced rather as after a defeat than before a victory. Much has been sacrificed to get a likeness of him; we have his head consequently presented in profile, as upon coins; he is, therefore, uncovered, in front of a determined enemy—a circumstance very improbable, as it is also improbable that he should be alone while urging on the standard-bearer or those near him. The figure is also deficient of dignity and self-possession—not that the occasion would not justify some degree of confusion in another commander, but it is not consistent with the character of Cæsar. The Britons do not appear in sufficient numbers to justify the backwardness of the Romans, and it is not sufficient to suppose them in imposing multitudes. The merits of the work are many and masterly; there is life and nerve in all the limbs, and the expression of each countenance is suited to the action of the body. The figures are moved by variety of intent, all contributing to the main purpose, with the exception of him who is restraining the horse, and his object is not apparent. The work is one of high promise, and, we trust, is the precursor of yet better things.\*

No. 66. 'The Introduction of Christianity into England,' F. HOWARD. An excellent subject, skilfully composed and drawn with great accuracy, but wanting in descriptive power of that kind which marks time and locality. The action of Paul is too declamatory—deficient of solemn earnestness. The composition is drawn upon sized cloth in a free manner, without the addition of white chalk.

No. 70. 'Joseph of Arimathea converting the Britons,' E. T. PARRIS. Joseph is a most successful study as a picture of Christian humility. He is surrounded by the people and their priests, and seems even to have broken in upon a Druidical festival, for he is preaching under the sacred tree. One of the priests is penetrated with the Divine truth, while another is mocking the preacher, and endeavouring to dissuade one of the audience, who seems moved by his exhortations. This cartoon gained a prize of one hundred pounds. If somewhat deficient in power, it is a production of much grace; pure in conception, and manifesting a fine feeling for eloquent and expressive beauty.

No. 72. 'Council of Ancient Britons,' BROWN. A chief is seated under an oak listening to the addresses of a priest. Besides these the group comprehends a bard, armour-bearer, dogs, &c. The style of the work is vigorous, and its character powerful.

No. 74. 'Boadicea, Queen of the Iceni, animating the Britons previous to the last Battle with the Romans under Suetonius,' WARD. The effect of the heroine's address is manifested by the motions of those around her: one strings his bow, another draws his sword, and all are moved to action. This is one of the few works that we marvel to have seen passed over. It is fine in conception, accurate in drawing, the figures are skilfully balanced, and the grouping is excellent. The fault of the work is the too great prominence

\* Mr. Armitage, although a very young man, has for some years resided in France, where he has been, and is, a pupil of De la Roche. This fact has given rise to a very general suspicion that the hand of the master has been at work upon the cartoon; and we have heard it distinctly, and on several occasions, stated, that the drawing was actually made in the studio of the great French painter. This it is our duty to contradict. While in Paris, in May last, we saw Mr. Armitage at work upon his cartoon, in his own studio, a mile or two distant from that of M. De la Roche. The judges very properly availed themselves of a provision by which they were entitled to call upon any artist whose work was executed abroad to produce another. Mr. Armitage has, therefore, executed another cartoon; it has proved entirely satisfactory and established his right to the premium. It is a very poetic conception, very boldly treated. It represents a father protecting his son with his shield, while with the other hand he slings a stone at his opponent. The passions of revenge and pity for the son are admirably expressed in the old man's face.

given to the attendant, who (with his back to the spectator) reins in the champing steed. But there is ample to compensate for this defect; the figure of Boadicea is admirable, an impassioned yet a dignified heroine. The merits of this work are undoubtedly of a high order; and we believe artists and critics generally will agree with us in preferring it to several upon which distinctions have been conferred. We shall remind Mr. Ward of the beautiful conduct of Flaxman, when worsted in a struggle for the gold medal of the Royal Academy, by Engleheart—a very worthless competitor:—"I determined," he says, "to redouble my exertions, and put it, if possible, beyond the power of any one to make mistakes for the future."

No. 76. 'Caractacus before Claudius,' MORRIS. There is everywhere evidence of care and research. Claudius sits in state; he seems represented from authentic sources, and looks very like a Roman emperor; but Caractacus is feeble—he wants dignity and presence: there is nothing in this version of him that would have induced the Romans to exhibit him in triumph.

No. 78. 'Boadicea haranguing the Iceni,' SELOUS. This production abounds with figures, executed with great facility and mastery. The name of the artist is but little known, but deserves to be more so. He is gifted with extraordinary facility of drawing, which might acquire the utmost force by being executed with less attention to prettiness. Boadicea rises a column amid her people, and is habited sufficiently near to the description of Dion Cassius. The composition is full of the movement which would follow such a speech. The tone of the material upon which this drawing is made is unquestionably the most effective in the exhibition. Considered as a picture, without reference to its qualities for fresco, it is a delicious work. The female forms are pictured with amazing grace, delicacy, and beauty. The grouping is most skillfully managed, and with the expression of each character has been introduced exactly the natural and true feeling. No competitor has better deserved the prize than Mr. Selous.

No. 84. 'Caractacus led in Triumph through the streets of Rome,' G. F. WATTS. This is a beautiful composition, in every respect worthy of the distinction conceded to it. Caractacus is a living presence; he sees and thinks—but laments his fate too much; for, in considering what he is, he ought not to forget what he has been; he has, therefore, scarcely dignity enough. The artist seems to have selected heads of every variety, from the Briton to the Hindoo, and has happily modified their expression respectively. In this respect we may say the best conception has been least worthily treated—that is, the head of Caractacus himself. We know not why he has been drawn with a forehead so narrow. If it is intentional, it is wrong in principle; and, with respect to proportion, it is too narrow for the cast of the face. There is little seen of the circumstance of a triumph, but the place of this is well supplied by the vitality of the figures; there are no trophies, no spoils; but the historical fact is well supported and brought forward in a manner sufficiently probable. This composition was not originally intended for this exhibition. Portions of the design were executed—perhaps the whole—two or three years ago, on another frame, as preparatory to being painted in oil. We mention this as a proof that, by returning frequently to a work with a "fresh eye," many of those glaring errors are avoided into which artists fall by too great a confidence in their powers of rapid execution,—which so often means bad composition and faulty drawing.

No. 92. 'St. Augustine preaching to the Britons,' THOMAS. The work of a young artist of high and undoubted genius, who is destined to occupy prominent professional rank. In our June number we passed some comments on two works in sculpture in the den of the Royal Academy, to which was affixed a name we had not

previously encountered. It was with considerable surprise we learned that he is also the producer of this fine cartoon. There is a noble feeling in the composition; a degree of rare eloquence in the expression, and sound knowledge in the treatment of it.

No. 98. 'The Introduction of Christianity into England,' NIXON. The first interview of Augustine with Ethelbert, King of Kent, is here represented. The artist has dwelt with good effect upon the anxious persuasions of the Christian Queen; the costume of the period has also been profitably studied.

No. 100. 'St. Augustine preaching to Ethelbert and Bertha, his Christian Queen,' HORSLEY. Ethelbert is seated, with Bertha by his side, while St. Augustine is emphatically addressing the king, into whose features there is thrown a refined and acute reasoning faculty which accords ill with the firmness with which he would yet cling to his infidelity. He is sorely pressed by the expositions of the preacher on the one hand, seconded by the prayers and entreaties of Bertha on the other, and grasps his axe in nerving himself to resist both influences. This axe, by the way, is by no means out of place, for the Saxons went armed even to their feasts. The figure of Augustine is energetic; but the shadow which is concentrated on him, had been better, more distributed in the composition. This drawing derives much value from the effective style of many of its heads. It ranks in the second class of the prize list, and has consequently obtained an award of two hundred pounds.

No. 101. 'Augustine, a Monk, with forty others, sent by Gregory to Britain, introduces Christianity among the Anglo-Saxons,' SAVAGE. The spectator is at once struck with the arrangement in this drawing. The monks and their audience form a semicircle round an oak, and the distribution is so formal as to outweigh whatever excellence the work may otherwise possess.

No. 102. 'Alfred the Great,' FOGGO. The argument is based on an anecdote related of Alfred during his wars with the Danes. While besieging Hastings, the Danish leader, in Exeter, the wife of the latter is a second time taken prisoner, and led before him with an urgent desire on the part of the people that the atrocities perpetrated by Hastings should be avenged by her death; but she is a second time liberated by Alfred. There is much truth in the action of the work, but the greater portion of it is so elaborately worked into shadow, that the wife of the Dane looks a spot in the picture. There is no graduation of light: the eye passes at once from prominent light to the depth of shadow, or rather hesitates to do so; so repugnant throughout the whole course of nature are violent transitions.

No. 103. \* \* \* CLAXTON. This is the story of Alfred penetrating into the camp of the Danes as a harper. A striking variety of character is given, and perhaps Alfred himself is less pleasing than many of those by whom he is surrounded. If mere harping had been his object in visiting the Danes, he might pass for an enthusiastic "son of the string;" but his real purpose should have been the paramount theme, but yet, with such features as he has, this could not have been effectively narrated; for he is assuredly Alfred the minstrel,—not Alfred the king and daring spy. There is, however, otherwise much probability in the character and arrangement of the scene. The Danes wore, we believe, longer hair than is here given to them, were usually habited in black, and considered by the Saxons as too much addicted to dandyism; the prince, however, is a very plain person, and scarcely sufficiently distinguished from the piratical band around him. The artist insists upon their other infirmities—play and the wine cup. Their disposition to the latter is shown by some of them who are quaffing with a "thirst quite Danish." In the

whole composition there is very considerable merit; and some of the figures may be classed with the more perfect drawings in the collection. Indeed but for the failure of the Alfred it must have secured a prize.

No. 104. 'Alfred the Great submitting his Code of Laws for the approval of the Witan,' BARDGES. To the author of this work was awarded a premium of the third class; it is an admirable subject, and might have been treated with better effect. Alfred, his Queen, and Prince Edward occupy the centre of the drawing, and around them are disposed groups formed of the great officers and dignitaries of the realm. There is in the countenance and attitude of Alfred a listlessness ill-befitting the occasion; this even extends to many of the others, who are not sufficiently alive to the interest and importance of the matter. On the right of the King are seated the Ealdormen, Thanes, Cymri, and Celtic vassals, &c., and on the left the Abbot Grimbold, &c. Here also Alfred is a failure.

No. 105. 'First Trial by Jury,' COPE. An imaginary subject, but none better or more appropriate could be found; its execution has entitled the artist to a premium of the first class—£300. The trial is held *sub Jove*. Alfred himself presides, seated on the right; while on the left of the cartoon are assembled the "twelve good men and true;" the centre being occupied by the prisoner, the body of the murdered man, &c. &c. The artist has limited himself to a narrative of the simple fact; whereas we submit, that so good a subject afforded opportunity of extensive allusion to the benefits of trial by jury. It is not necessary that if a man be a prisoner he should also be a criminal; but the aspect of the prisoner in this case is so much against him that we cannot help thinking Alfred, in his justice, must, in his charge to the jury, have endeavoured to divest their minds of prejudice; for assuredly the accused belongs to

"A race of men with foreheads villanous low."

The murdered man has left a wife and child, who are addressing evidence to the jury, into whose features more of inquiry might have effectively been thrown. Alfred is again a failure; he does not look like a man to make head against the Danes; the features should have been distinguished from all around, as much as he himself was in advance of the time in which he lived. To this drawing, shadow is almost entirely denied, and with injurious effect, for much force could have otherwise been communicated to it. The work will bear these slight objections, for, as a whole, it is the most excellent production contained in the Old Hall; and as such it is regarded by all classes—the refined and the ignorant. The group in the centre—the widow and her orphan boy—is a most eloquent reading; and the "Twelve" are admirably composed and contrasted. The cartoon is, moreover, drawn with great skill. It has elevated Mr. Cope to a high professional rank.

No. 106. 'Edith finding the Body of Harold after the Battle of Hastings,' BARKER. Two monks, Osgod Crophe and Allric the Childe Maister, having obtained permission to search for the body of Harold, could not distinguish it among the heaps of slain; they therefore sent for Edith, the mistress of Harold, to aid them, which she did, and discovered the body. Her distress and the circumstances of the discovery form the subject, which is well made out, but the whole is of a singularly low tone.

No. 108. 'The Death of William Rufus,' BARAUD. The arrow has struck him in the breast, and he is placed in such a position with regard to Tyrrel that we must suppose him to have turned or moved forward, even allowing the shaft to have previously struck the tree, before we can account for his being struck in front. The figure is too slight, but parts of the horse are admirably drawn.

No. 109. 'Thomas a'Becket refusing to sign the Constitutions of Clarendon,' M'MANUS. The

Constitutions of Clarendon were drawn up for the purpose of subjecting the Church to a paramount authority. The bishops, beginning with "Roger York," have subscribed their names, but a'Becket refuses, and his declaration is received by the barons with disapprobation, inasmuch that they address their hands to their weapons. The circumstances of the passage are clearly told; in the figures of the Barons (the one who holds the pen, especially) much talent is manifested. But the countenance of a'Becket is singularly unpropitious—while that of one of his attendants approaches the grotesque.

No. 111. \* \* \* SEVERN. A version of the anecdote of Eleanor sucking the poison from the wound in the arm of her husband. That love of the *nudo*, so prevalent in the schools, has extended Edward nearly naked in the middle of the cartoon. The figure, however, is extremely well drawn. Eleanor is bending over him with her lips to the wound, while warriors on one side, and ladies on the other, are anxiously waiting the result. Edward still grasps his sword, on which is inscribed *Christo dedicatus*. This is a circumstance scarcely in keeping with the prevalent feeling. This cartoon is distinguished by mastery in drawing and composition, inasmuch as to entitle its author to a prize of £100. It has given pleasure to many to find Mr. Severn among the prize-gainers; he has fought stoutly for frescoes from the moment the idea of their introduction was first broached among us.

No. 113. 'Sir William Wallace,' FOGGO. The execution of Wallace is represented in this composition, or at least the last preparations for it. Edward I., who was present at the execution, on seeing some monks about to administer the last offices of religion to the prisoner, ordered them to depart, when the Archbishop of Canterbury declared that he himself would offer spiritual consolation to Wallace. The cartoon contains a multitude of figures elaborately drawn, but as a whole it wants breadth.

No. 116. 'Bruce's Escape on the Retreat from Dalry,' F. HOWARD. A composition full of spirit and energetic life. Bruce is beset by three of Lorn's followers, who simultaneously throw themselves upon him from a crag, under which he was obliged to pass. He is mounted on a spirited horse, and struggling with his three assailants, who are clinging to him and the horse. The firm riding of the figure and its nervous action are beyond all praise. The drawing is slight, but most effective; the right leg of the rider is finely described as nervously pressing the flank of the horse. This obtained a prize of £100 among those of the second distribution.

No. 118. 'Edward the Black Prince entering London through Southwark, with John, King of France, taken prisoner at the Battle of Poitiers,' B. R. HAYDON. The spectator is struck with the crowded appearance of this cartoon. Edward is mounted on a small black horse, and John rides a white horse of great power and spirit. The artist has fallen into the error of giving black armour to Edward, as supporting the assumption that he received the epithet "black" from this circumstance; but the first authentic mention of Edward as the "Black Prince" does not occur until the second year of the reign of Richard II., in a parliamentary paper. On this subject Froissart says, that in consequence of his invincible valour, and victories so disastrous to the French, he was called *Le Noir*, but affords no data in support of the vulgar supposition of his wearing black armour. He may at tournaments in England have worn a sable surcoat with ostrich feathers upon it; but in battle he appeared with a coloured surcoat, embroidered with the arms of England. Sir S. Meyrick, in his work upon armour, has examined the merits of the epithet, but is not of opinion that its application arose from the colour of the armour. The prince and the king on their respective horses ride unusually low; so much so that, ap-

parently, a moderately tall foreground figure would stand only about a head shorter than the former. The scene is laid in the streets of Southwark; the windows are crowded with spectators, and the rear is closed by a train of knights and men-at-arms.

No. 122. 'The Plague of London,' E. COMBOLD. This drawing has been made upon a blue ground, with (we presume) the view of aiding the intensity of the subject; but in this it fails, for the effect of the work is by no means served by it. The composition and drawing, however, cannot be affected, and these are of a high order of excellence. There are no scenes of poignant horror, but the picture is nevertheless stamped with abundant truth. One of the city crosses rises in the middle of the drawing, before which an ecclesiastic is exhorting the people to faith and repentance, while around him are lying the dying and the dead. On the right is seen a remarkable figure, distinguished by great graphic power: it is that of a woman recently dead. Near the centre kneels a lady lamenting a husband or lover: she is intended to give force to the scene by contrast, for she is richly habited, but she is, we may say, a spot in the work, as materially injuring the general effect. This work is marked by positive vigour and independence of style, and achieves for its author rank and consideration in his profession. It has gained a prize of £100.

No. 124. 'The Cardinal Bouchier urging the Queen of Edward IV. to give up from Sanctuary the Duke of York,' BELL. The artist has studied accuracy in every part of this work, so much so, as to appear timidity in some parts. It is a relief to meet with such a subject not overdone in costume and accessories. The personages are presented precisely as the incident might have taken place. The queen looks her refusal to the cardinal, and the child in apprehension seeks the protection of his mother. The figures are endowed with the valuable qualities of roundness and solidity, and the story is told with sufficient perspicuity. This work entitles its author to a prize of £200.

No. 128. 'The Fight for the Beacon,' TOWNSEND. This powerful and effective production illustrates no given fact, but is composed after a passage in Southey's "Lives of the Admirals," describing in earlier times the descents of the pirates on the coast, on which occasions the beacons were important, as instrumental in alarming the country. In this case the beacon is placed on a tower which the pirates are attempting by escalade against a very determined defence. The beacon fire overhead is giving forth its volume of black smoke, anxiously tended by a man who is clinging to the staff while the conflict is going on below. In the principal figure, a fierce and gigantic Northman, there is too great a display of anatomy, even allowing everything for violent exertion; however, the main virtues of the work sink all minor objections and rank it as a production of the highest class. There is in the attack and defence an earnestness of purpose impressing the mind with emotion proportionate to its reality. Two hundred pounds have been awarded to the artist. The work may be taken as a sure augury of an enduring fame. The artist must, ere long, hold rank the most elevated. It is worthy of note that this subject does not, strictly speaking, come within the limits laid down by the commissioners in their rules. We are glad to find they have no disposition to a literal adherence to them. This fact opens a vast volume to future competitors.

No. 133. 'Act of Heroism of Sir Philip Sidney,' BURBACK. This is the anecdote of Sidney refusing to drink the water which was brought him, on seeing near him a wounded soldier, whose necessity he thought greater than his, and to whom, accordingly, he desired that it might be given. The background is extremely dark, without any apparent purpose; the artist has re-

lied entirely upon this depth for his effect, which shows this to be rather an experiment than the result of profitable study. We allude to it, chiefly because the subject is a fine one, and of a class we desire to see adopted.

No. 135. \* \* \* DAVIS. The subject of this cartoon is the humanity of General Monk and the Lord Mayor of London, Sir John Lawrence, during the prevalence of the plague. In the front of the cartoon a woman has cast herself in despair on the bodies of her husband and child; and on the left is another impressive passage—a man raving mad under the influence of disease, who has escaped from his nurse, and is rushing naked into the street. On the right of the composition is the Lord Mayor, who is giving a box of medicines to a girl, and behind the principal group is a physician busy in the work of humanity. The pestilence is powerfully described in the woman lamenting her husband and child, and its utmost horrors in the raving figure on the left. There are parts of the work that possess very high merit; but the whole is considerably injured by the formal, official address of the Lord Mayor.

Thus, although we have noticed a large proportion of the 140 cartoons, we have passed by several without notice. They are such—at least to our thinking—as do no credit to the producers; and which we again express our regret to see exhibited at all. To prepare a cartoon requires very considerable outlay—not alone in the mere material to be covered, but in obtaining necessary models. And, moreover, it demands a large expenditure of time. To imagine that a cartoon 12 feet by 10 can be completed with as much rapidity as a slight oil sketch is a grievous mistake. The work must be inevitably tested by its own genuine worth; no apology for bad drawing can be made by brilliant colouring—the cartoon must be THE NAKED TRUTH!

Of the value of these studies to our school, then, too large an estimate can scarcely be formed.

Even this one experiment will have wonderfully advanced it; and when a second, a third, and a fourth time, our Artists have been subjected to a similar severe test SIMILARLY ENCOURAGED—we boldly affirm we shall be in a position to "try a full" with the world, upon any ground that may be selected.

But then comes the question, are our British Artists to be "similarly encouraged?" The answer ought to depend upon the proof whether this first experiment has been successful or unsuccessful.

We must content ourselves for the present with directing attention to an advertisement in our first page. It was received just on the eve of our going to press; and we are unable to give it the consideration to which it is entitled. It appears that the next exhibition will consist of examples of actual fresco as well as of cartoons; and that no premiums will be given to successful candidates, but that their recompense will be employment in painting the Houses of Parliament. We cannot avoid a passing expression of regret that at least one more experiment is not to be tried before bringing matters so fully to the rigid test. But a whole year of preparation is before the artist. Genius and industry may work wonders within that year.

\* \* \* WE HAVE AUTHORITY TO STATE THAT "A SMALL PORTABLE FRESCO," EXECUTED BY E. LANDSEER, R.A., "MAY BE SEEN AT GWYDYR HOUSE BY ANY ARTIST ON ANY DAY DURING THE NEXT WEEK."

## THE NOMENCLATURE OF PICTORIAL ART.\*

### PART I. BREADTH.

**BREADTH**, in painting, is a term which denotes largeness, space, vastness.

Its operation is not limited by a small canvass, or extended by a large one. Finish does not preclude, or negligence secure it.

It very seldom accompanies a mere outline, though some few and limited subjects in outline admit it.

Its greatest promoters are, colour and chiaroscuro; in which, when under consummate management, it revels in its full power and grandeur. Opening and liberalizing the mind, it would appear to lift a weight from the spirits; and enables the eye to range over expanses, and comprehend an infinity of objects intricately involved, without the slightest feeling of confusion.

It may, like some other of the elements of fine art, be carried to excess, when it always looks like either weakness or affectation; and consequently some subjects, of extremely simple and limited materials, have under some effects so much of breadth natural to them, that it becomes necessary to slightly complicate the too equal division of their masses.

This defect, and its remedy, are conspicuous in many of the landscape compositions of the Dutch school. The extreme instances are those which having a light sky and distance on one side, and a mass of dark foliage and foreground on the other,

\* Mr. Pyne, to whom we are indebted for this commencement of a series of papers, which, we have no doubt, he will render very valuable to his professional brethren—has in a degree explained his plan and purpose in the following note, which we therefore print. Mr. Pyne's ability as an artist is universally appreciated; we rejoice to find him communicating to others the knowledge to which he is indebted for success. After all, it is only from artists that really useful information to artists can proceed.—mere theory, without long practice, is of little worth. Unfortunately, members of the profession too generally lack either the will or the power to give the results of study, labour, and experience, in such a manner as to make them practically serviceable. There are, however, very many who can and ought to do so. We hope Mr. Pyne's example will be followed.

Sir,

As an art or a science advances towards perfection, and opens up in its course new sources of operation, as in the case of our own (that of Painting), the results of which in its different states are addressed to the insatiable demands of an ever restless imagination, its nomenclature necessarily changes, purifies, becomes determined in its meaning and close application, and increases. Under an impression that a series of articles on even so humble a subject may extend the utility of your already useful and influential Journal, I have sent you the first few, without entertaining a doubt that you will, with me, feel the advantage of clearing away all ambiguity and equivocal expression from a set of terms—in general, though often imperfect, application to an art always considered as difficult of illustration—and feeling no hesitation as to the desirability of what is here attempted, doubt merely the propriety and completeness of the manner in which only I shall be able to treat a subject, that may perhaps have better fallen into the hands of another.

My object will not be merely to define; feeling that a definition of itself, though difficult, conveys no practical knowledge. Lindley Murray's definition of a verb ("to do, to be, or to suffer") may be the best extant, for aught I know; but what schoolboy upon first reading it, ever learnt more of a verb than the person who questions the late comedian Mathews, in his character of a connoisseur, on the meaning of the pictorial terms "breadth, gusto, high style," learnt of the meaning of those three words? As a cutting satire, not only on the connoisseur, but on the ambiguity of the terms common in speaking of the art, Mathews places himself before a supposed picture; advancing towards it his right side, and bringing his elbow somewhat in front of his person, he elevates the heel of the hand, and drops the points of the fingers until the palm obtains a position of perfect parallelism with the supposed surface of the picture, when forcing the points of his fingers to perform very slowly two or three circles, with the stationary wrist for a centre, and looking unutterable pleasure at his catechist, he says, they (the terms breadth, gusto, high style) mean "all that!" adding, that though a picture may have all the beauties of all the great painters that ever existed, in the absence of "all that" it is worthless in the estimation of the true connoisseur. The "all that" style of explanation, then, is intended to be studiously avoided in these articles; and I flatter myself, if in the absence of "all that" all this be read, that some, if not sufficient light, will be thrown on the nomenclature of Pictorial Art, particularly if accompanied with a description of the means generally used to obtain certain qualities to which such terms attach, and what deteriorates or destroys them.

Your obedient servant,  
J. B. PYNE.

are complicated by a light spot on the dark, and a dark spot on the light side of the picture. The further these spots or points of attraction be placed from each other, the greater breadth will result.

These two points always require a third, as the eye in its constant recurrence from one to the other in a straight line, is inclined to run beyond the bounds of the picture, and is brought back only by a violent jerk unpleasant to the organ. A cloud lighter than the rest of the sky will generally remedy this unpleasant sensation, by forming with the two other points a triangle. The eye by this means is kept within the picture, and traverses from one to the other with all the ease desired; and will never be inclined to bolt (using a term common to the turf) past the limits of the canvass. If the light cloud be brought down in its full force immediately behind the dark trees, it will give vivacity and vigour; but if, instead, it be carried into the other part of the sky, where, though painted ever so pure and vigorously, it cannot meet with the same opposition, the effect will be more bland and easy. It must be borne in mind, that whenever in a picture there be more than one principal point of force, there should never be less than three, for the reasons just stated. The extent of breadth will mainly depend upon the distance by which these points may be separated; and that they be of different degrees of force, form, size, and colour, amounts to a law, the breaking of which is its own immediate punishment, and tells against the delinquent upon every exhibition of his work.

A single figure or object, if of any size or consequence in a picture, falls under the same inevitable consequences, as regards breadth. One or more points will be necessarily darker, lighter, or more coloured than others; and on the disposition of those points of force depend much of the breadth and large look, or loom, of such objects. Sailors speak of a vessel as looming large or small; and the circumstance under which a ship looms largest, is immediately upon the horizon, or emerging from a fog bank, as figures upon the edge of a hill which comes against the sky have their proportions apparently enlarged. In all three of these instances the detail of the objects is reduced, either from opposition or obscuration. The opinion is current with many, that keeping down all strong oppositions—whether of form, of colour, or chiaroscuro—will produce breadth; and that repose will result from the same management. This position may be allowed, without the least prejudice to what will be advanced on the subject in this Essay. A certain amount of breadth and repose may result from throwing away all which has the power of separating or exciting; but who, it may be safely asked, would as a painter consent to the sacrifice? and who as a connoisseur could be found to admire such a pictorial negation, sufficiently to hang it on his walls?

As courage is not to proved solely by keeping out of danger, so power can only be made manifest by grappling with difficulty; and a painter by producing one quality, say breadth, at the enormous sacrifice of every other pictorial constituent, would obtain as little credit for the achievement, as a host would, who boasted of having kept in perfect good humour a company composed of extremely opposite opinions, if it should be discovered, that in order to do so he had managed to put them all asleep; while the interest or pleasure to be derived from the contemplation of such a picture, or such a party, would be about parallel. The object of a painter is not to display all his pictorial forces asleep, or even drowsy, from the fear of their warring with each other; and no work can be said to be arranged with the chance of producing its greatest possible impression, unless it admit, and even require, all its powers to be wide awake and in their full freshness and vigour,—subservient, of course, to a due and nicely discriminated subordination. The great difficulty lies in so legislating—as it may be called—that such nicely discriminated subordination shall appear to be the natural and inevitable consequence of the position and circumstance under which objects shall present themselves in a painting, and not arbitrarily or capriciously treated for the sake of art itself. It is the weak only who have resorted, and ever will resort to this practice;—those who are content to imitate masters instead of nature, and prank out canvasses with a display of certain pictorial qualities, without ever giving the proprieties a thought.

Abstract art and high technical art have been impeded in their development and due appreciation, through those painters by reflection—artists by receipt; and many highly talented men, of minds nicely sensitive to ridicule, have been repulsed from a dispassionate and philosophic inquiry into what constitutes technical excellence, by being rallied at, and classed with those who possess technical excellence alone, and who—if they know any thing at all of the deep and inexhaustible resources of nature—manage to so completely swamp it in technicalities, as to leave a regret that they had not rather been thrown into some little quibbling profession, in which low dexterity rather than liberal mind might be required. "Don't talk to me of rules," says a painter who has trodden about one tenth part of the ground necessary to mediocrity; "don't talk to me of rules,—I drink inspiration from nature, and trust to genius" (q. chance?). "Rules never made a painter,—I feel them as fetters." Rules certainly never made a painter, nor have we any record of a horse having been made by a bit. But turn a horse loose without a bit, and a painter without rule, and the two animals are about in the same predicament, and may, or may not, arrive at any given point by about the termination of their natural lives.

Sir Joshua Reynolds has very happily said, that rules, like armour, only encumber the weak; and that nothing can be repeated with certainty, unless it follow some known rule. The truth of these remarks is so palpable and self-evident, that an attempt to illustrate them still further, would be somewhat like an attempt to polish the sun; and I will leave them in their primitive brilliancy, to proceed with the more immediate subject of breadth.

Suppose a nude figure standing under such a disposition of light as to receive no very strong shadows; the dark hair of the head, and the shadow from the feet, place the two points of force as far removed from each other as by possibility they may be in such an object, and the greatest possible degree of breadth is the result. Place a strong dark and cold piece of drapery round the middle of such figure, and the result is an approach to littleness. Alter the colour again from cold dark to warm dark; the defect will be modified, from the warmth of tone in the drapery harmonising and uniting in colour with the flesh, though opposing it in chiaroscuro. Change it again to light warm colour, say light orange, yellow, or white, and the original breadth and largeness of effect will be restored; though if the white be too pure (supposing such colour adopted), and the shadows in the detail be painted cold, an approximation to littleness may again result. Under this treatment, a principal actor in a group, though of the same actual measurement with the rest, may obtain a greater consequence and largeness of appearance than those around it, whose draperies may be disposed so as to receive a greater number of points of shadow in the detail, all subdividing the figure into small parts, and all tending to distract the eye, and prevent its comprehending the whole at one glance.

Breadth in a group of figures may only be produced by the same treatment. If the general tone desired be warm and light, the yellows and reds, oranges and citrons, with their infinite modifications, should be joined together; while the antagonising colours should be managed to fall at the greatest possible distances from each other, and in the smallest possible number. Care should also be taken (when breadth be in view) that the antagonising colours be not the true opposites or chromatic equivalents of the colours upon which they fall, or with which they come in immediate contact. Thus the two warm primaries, yellow and red, may find sufficient antagonism in their own distant relatives—in the tertiaries, citrine and russet, or slightly leaning towards olive; and the warm secondary orange, in gray slightly leaning to citrine or russet. If any sharper opposition may be wanted for the harmony or effect of the whole mass, let the opposites to the warm scale—purple, green, and olive—fall upon the tertiaries, and come in contact with their true equivalents. Let it be remembered, that in addition to this extended field for choice, black and white harmonise with any colour that can be named, and are never inadmissible but on the score of those proprieties that belong to light and shade.

Let us again return to landscape. The first class examined was one of such extreme simplicity, as to offer some risk of too much, rather than too little breadth,—a class of works of which the first Dutch masters were extremely fond, as they preferred sure and comparatively easy ground, to that in which there might be speculation and danger.

In leaving the extremely simple, let us at once examine the capabilities of the most complicated and intricate class of subjects that can present themselves to the painter. If breadth in the first class would appear to depend upon the opposition of masses, that system of itself will not produce the same results in the last.

If a series of oppositions were to be carried on equal to the relief of all the integral portions of a complicated subject, it would be found that confusion and littleness, instead of breadth and grandeur, had spread themselves over the whole expanse of the work, notwithstanding all the truth of colour, and beauty of a matured manipulation had been lavished on its completion. Many men of limited powers, after repeated struggles to conduct a grand subject on the plan of a simple one, have left those finest scenes in nature in disgust, and have ever after refused to select any but those commonplace "dirty pastorals," in which a hedge, a ditch, and a cottage, or a cow-shed, and an any thing but a purling stream, make up the principal and uninteresting objects of this class of work.

Those must be the landscape paintings which tempted the morose but talented Barry to so ungenerously, and unphilosophically rail against landscape painters, and Reynolds to publish his doubts whether landscape painting could be conducted upon the same high principles that regulate the painting of history. Had those two men lived to see but half a dozen of the finest works of Turner in his zenith, or could be admitted now into that great man's little mouldy gallery, the one would have generosity enough to withdraw his unadvised asperities, and the other to recal his more courtly doubts as to the character of landscape painting and landscape painters.

But to the subject. The same outlay of mind that in the simple subject was devoted to contrasting masses, and throwing about spots of light and shade and colour, must now, in a scene of greater pretensions and complexity, exert itself in *joining masses together*. Distances must be joined to skies, hills and rocks to distances; rivers will reflect still further down into the picture a repetition of the scenes rising above them; and towns and woods may amalgamate with the back grounds upon which they relieve, without altogether involving an outlay of more than light middle tone in the detail. This, at first view, would appear to warrant a fear that the combination would result in weakness; but on the contrary—where masses associate in light and shade, they must oppose in colour; and where they closely relate in colour, light and shade must disjoin them, sufficiently for the purpose of the painter, and for the aerial truth of the painting, but no more. Then come the valleys rolling out their undulous and flooded laps before the ever-feeding herds,—tracts of golden grain alternate with long sweeps of many-coloured herbage,—and reeking villages and clattering mills complete this middle distance of an English pastoral landscape, before ascending towards its immediate foreground.

Thus far may be realized without trespassing upon the resources of the palette further than dark middle tone, and the semitransparent media; leaving in the hands of the painter, untouched, most of the transparent dark pigments, as well as the more prominent colours, with black and white.

These will be quite equal to the demands of what remains undone; and the introduction of waving woods, rising downs, rich ground foliage, and detached masses of trees, with moving incidents of figures, buildings, animals, &c., will furnish the necessary forces, judiciously disposed of, to create that easy and grand breadth, without which a complicated subject had better remain unpainted, and failing in which, it must yield to the reiterated but mistaken opinion, rife in the mouths of the painters of "the dirty pastoral," that it may be a glorious subject to look on, but quite unfit for canvass.

J. B. FYNNE.

### COSTUMES IN FRANCE.

As there has always existed a strong relation between the modes of personal equipment, civil as well as military, prevalent in France and Britain, we give a brief survey of the history of French costume in order to exhibit international distinctions and modifications, by comparison of the styles of both countries. No occasion have we suffered to pass of insisting upon a knowledge of costume as necessary to accuracy of description in painting: to resolve much that may be said on this subject into a few words—the costume of a picture is the time and place of the event it records; and inaccuracy in this is an error as aggravated as is anachronism in history. We say we have used every opportunity of recommending the acquirement of a sufficient knowledge of costume; and this we have done not without showing that it was necessary. There has been of late more attention to this particular: but here again the little knowledge is a most dangerous thing—it shows itself untempered by any thing like discreet reasoning: hence so frequently does fashion become the obtrusive character of composition. Our notices of French costume must be, for many obvious reasons, short; yet they will be sufficiently extended to assist the artist to deductions unquestionable on authority.

The history of Gaul is divided into three great epochs: first, that of Independent Gaul, commencing at some remote and undefinable period, and terminating at the birth of the Saviour: then of Roman Gaul, enduring for something more than four centuries; and lastly, of Barbarian Gaul, from the year 406 to the year 987.

At the time when the history of Ancient France begins to be cleared up from obscurity and conjecture, that is to say, two centuries before Christ, its population consisted of (besides the Aquitanians and Ligurians isolated in the south) Galls or Celts and Cimbrians, bearing commonly the name of Gauls. After a succession of struggles for independence during more than a century and a half, these nations were entirely subjugated by Rome, and shared the fate of the ancient mistress of the world, until the definitive irruption of the Barbarians in 406. The senate, 118 years before our era, declared the country lying between the Rhone and the Alps a Roman province: and at the termination of his sixth campaign against the Gauls, Cæsar nominated the whole of the remainder of Gaul, Proper and otherwise, a second Roman province, giving it the name of *Gallia Comata*\*, which by Augustus was divided into three great provinces—Belgium, Aquitaine, and the Lyonnaise. Provence remained as previously demarcated, and was known as Narbonnese Gaul: this district was also called *Gallia Braccata*, or the country of the Gauls wearing pantaloons or trowsers, because this ancient Gaulish vestment had been continued under the Roman dominion; thus acquiring for this part of the country an appellation to distinguish it from that of which the inhabitants had adopted the Roman fashion in attire, and so giving to their country the name of *Gallia Togata*, or Cisalpine Gaul.

The Gauls were robust and tall of stature: their complexion was fair, their eyes blue, and features regular and imposing. Their hair was generally fair or brown, but they imparted to it a positive red, perhaps by washing it with lime-water, or frequently anointing it with some unctuous compound prepared for the purpose. It was worn at great length, loosely flowing on the shoulders, or gathered in a knot on the head.

\* The country of the Gauls wearing long or bushy hair.

The common people allowed the beard to grow, but the nobles shaved, leaving hair only on the upper lip.

The earliest recorded fashions of the Gauls in their apparel was as simple and rude as their mode of life. During the summer, they were almost in a state of nudity, but in winter, they clothed themselves with the skins of wild beasts.

The first innovations upon this style of attire were derived by intercourse with the Phœnicians, Greeks, and Latins, by whom they were taught to spin wool, to grow hemp, and weave cloth. This induced the art of dyeing among them, which they taught their neighbours, after which improvements the Gaulish costume assumed a more definite form, consisting among the Galls, Gallo-Cimbrians, and Cimbri-Belgians, of the *bracca* or pantaloons, *chlamys*, tunic or shirt, and *sagum*, blouse or frock. The principal part of the dress, the *bracca* (*unde deriv. breeches*) was large, loose, and gathered in folds among the Cimbrian races, but among those of Gaulish origin, on the contrary, confined and close-fitting, especially in Narbonnese Gaul, called *Braccata*. It descended generally to the ankle, where it was confined.

ers, disks, and a variety of devices, and even embroidered with gold and silver. The blouse of the peasantry of some parts of France is a tolerable representative of the *sagum*, which was formed of two square pieces of cloth, with or without sleeves, having an opening whereby to pass the head, and which, when thus adjusted, covered the back and shoulders, and was confined by a clasp under the chin. This garment

planation has been offered with respect to the dog held by this figure. As to the goblet accompanying the monumental remains of Burgundy, Montfaucon believes it to typify a country then as now abounding in excellent wines.

The Gauls covered the head with a cap made of wool or hair: their feet were generally covered; but in winter and in wet weather they wore wooden sandals. The rich wore a kind of slipper. The women were tall and handsome with somewhat of a masculine air: those of the richer classes used rouge. Their dress consisted of a tunic full and plaited either without sleeves or having them long and close-fitting: this garment was confined at the waist, but open upwards, discovering the lower part of the neck, and in length descending to the feet; it was ornamented by the rich with bands of purple and gold. Above this tunic, attached to the ceinture and depending from it in front, they wore a small piece of cloth in the form of an apron, and in winter they enveloped themselves in mantles similar to those of the men, which were fastened on the shoulder, or in smaller mantles only long enough to cover the arms and hands. Some also wore leathern pockets called *bulga*, which are still to be seen in Languedoc, where they are called *bouls* or *boulgetes*. Their hair was divided in front and tied behind, and a simple square coif covered the head: this, at least, is the head given by the Gaulish sculptors to the goddess *Nehalennia*. Some women wore a long veil which did not cover the face entirely, but only a portion of the forehead and the back of the head whence it descended, covering the shoulders and bosom, and having its folds arranged in a manner to accompany the hair and assist the effect of the mantle. The cut is after a bas-relief at Langres, and represents a girl holding a pail as about to draw water. Her head-dress is still common enough in France. The tunic descends only to the mid-leg, and is jagged or vandyked. She wears an apron which is rarely seen among monumental remains.

The offensive arms of the Gauls were slings, hatchets, and knives made of flint or shell, clubs, spears hardened by fire, which they called *gais*, and others termed *cateies* (*gath-teh*, fiery dart), that were hurled at the enemy while burning. These arms, formed of stone, have been frequently found, sometimes in tombs, and again in caverns which appeared to have been the habitations of the Gauls. It was only by degrees that weapons formed of metals came into use, and even after their introduction arms made of stone continued to be used. Their defensive equipment was limited to a shield constructed of wood rudely put together, or of osiers covered with leather. It was in form oblong, sufficiently large to protect the entire body, and ornamented with coloured devices. Before commencing a battle the Gauls stripped themselves, and fought almost in a state of nudity, even against enemies who had the advantage of being protected by iron defences; and it was not until towards the second century, and after repeated defeats, that they renounced the custom.

When the Gauls, by means of intercourse with other nations, procured arms formed of metals, and acquired the art of making them for themselves of the copper and iron of their mines, the military equipment of Rome and of Greece began to be adopted on the banks of the Loire, the Saone, and the Rhone, forming, in conjunction

with the Gaulish appointments, an equipment sufficiently grotesque. To a helmet of a material more or less valuable according to the condition and fortune of the wearer, there would be perhaps attached the horns of the elk, the buffalo, or the stag, or it might be surmounted by a crest ornamented in relief with the figure of a bird or wild beast, the whole terminating in a high plume; so raising in appearance a moderate stature to a gigantic height. Similar figures, flat and in relief, were also nailed to the buckler, which were supposed to typify the quality and degree of courage of the wearer. A common equipment consisted of a buckler and helmet of the above description, together with a cuirass of leathern scales, or the legitimate *lorica* of the ancients, or a mailed hauberk. An enormous sword hanging at the left thigh by a copper or iron chain, sometimes by a belt ornamented with gold, silver, and coral, a collar, bracelets, rings round the arms and the middle finger (for both sexes had a passion for ornaments of this kind), the *bracca* or trowsers, the *sagum*, richly

Gaulish Soldiers, before the Roman dominion.

embroidered; and, lastly, a long and luxuriant red moustache. Such were the appointments of nobles of certain of the Gaulish tribes, as the *Ædui*, inhabiting districts bordering on the Saone and Upper Loire, the *Arverni*, occupying the modern Auvergne, and the *Bituriges*, also near the Loire.

Besides these weapons, there was another of Gaulish invention: it was a kind of lance, the iron of which was about a foot and a half in length, in breadth about six inches, and terminating near the shaft in two sharp points bent downwards in form of a semicircle. The form is shown in the cut.

War was exclusively the profession of the Gauls; and their favourite amusement warlike games. The maintenance, therefore, of a sufficient military equipment was considered by individuals not only a point of honour and personal distinction, but also a civic duty. At regulated periods the youth were wont to be measured by the chief of their district; those who exceeded the standard of corpulence were severely reprimanded.

manded as inactive and intemperate, and were moreover punished by fine. Several of the tribes stained the body with a bluish substance and others were tattooed.

#### COSTUME UNDER THE ROMAN DOMINION.

The fourth revolution which was effected in the Gaulish costume changed it entirely. The country having been subjugated by the Romans, a portion of the inhabitants, especially those of condition, adopted the habit as also the language and manners of their victors: but the mass of the people preserved their nationality longer, and the Gaulish pantaloons continued to be worn by them even till the time of Charlemagne. In the meantime luxury was progressing among them, in so far that both sexes were loaded with trinkets: they wore rings, collars, ear-rings, bracelets, girdles, clasps and buckles of gold, pearls, and precious stones. The peasants even,

Costume of a Gaulish Chief under the Roman dominion.

and lowest orders wore ornaments, but these were of silver.

Under Constantine (306) the *orarium*, a band of white lint, which was passed over the tunic was in general use, and soon it was enriched with gold and precious stones. This was followed by the *sudarium*, a kind of handkerchief, which was held in the hand.

In the female attire also many changes were made in imitation of these examples: they altered the form of their tunic, plaiting it in front to adjust it to the body. Below this they wore the *strophium*, a sort of corset, and their *chlamys* was similar to that of the men. The richer plebeians wore close mantles, which were also adopted by the wives of the nobles. These were longer behind than before, embroidered with flowers, festooned, and sometimes open at the right side.

The auxiliary troops which Rome levied in Gaul, embodied afterwards with Roman legions,

assumed the Roman arms and manner of fighting. The urban militia retained much longer the habits of their ancestors. The light troops wore a cuirass above the sagum, while others wore the tunic and pantaloons. Under Theodosius (379) the Spanish sword, suspended at the right side, and at the same time the Roman sword, were in use. During the lower empire the cavalry wore a defensive *cap-a-pie* armour, whence these troops were called *cataphracti*: their offensive arms were the lance and the axe. The ordinary arms, however, were the lance and the sword: the shields of the cavalry reached from the shoulder to the top of the thigh; but those of the infantry were longer, reaching from the shoulder to the knee; they were made of leather or wood, guarded with iron; and in shape, square, hexagonal, round, or oval. They were ornamented with the sacred monogram, which was replaced by the cross. The cuirasses were literally so, being made of leather; or the body was defended by the *lorica squammata*. The helmets were of copper, iron, or leather guarded with iron.

Although the Gauls assumed the costume of their conquerors, the latter had even earlier adopted all the Gaulish vestments. It was the

same under the emperors; the northern fashions extended even to the military costume, and it was not uncommon to see at the head of a legion a chief attired in the manner of Indutiomar or Vercingetorix.

During the sojourn in Gaul of Antoninus, the son and successor of Severus (211), this emperor was much pleased with a garment of the country called *caracalla*, a kind of tunic with a hood formed of several pieces of stuff sewn together. Not only did he adopt it himself, and add it to the equipment of the Roman soldiers, but wished to see it worn by the lower orders of the people. This garment, as it was worn by the Gauls, was short, loose, and well fitted as a military appointment, because in nowise obstructing the movements of the body. On the occasion of a festival at Rome in 213, Antoninus included among his other gifts to the people a distribution of these garments, which in honour of him were called *Antoninians*: they were readily adopted, and the new fashion extended from Rome to the provinces; but while the Gaulish mantle was honoured with the imperial name, the emperor received in derision that of the mantle, being afterwards called only *Caracalla* or *Caracallus*, when familiarly spoken of; and history, notwithstanding its grave dignity, has contributed definitively to attach this burlesque surname to the *prænomen* of the son of Severus.

How rich and imposing soever might be their adopted costume, it would yet seem that the Gauls cherished the remembrance of the sagum, trowsers, and all the other items of their national attire, which reminded them at once of their past triumphs, lost independence, and the roving lives of their fathers, full of so many charms for their warlike spirit. Therefore, in order to commemorate their ancient fashions, they instituted annual festivals, during which some wore the Gaulish garment, which is well represented by the Highland kilt; others the wooden sandals of ancient invention, and which for this reason were called *Gallica*, a word which has descended into *galoshes*; some put on white tunics like those of the ancient Druids, and others enriched their hair with gold dust; and, as a further characteristic of these festivals, a portion of both the day and the night was passed in their celebration.

At their numerous and barbarously magnificent festivals, the table was round, and the guests placed themselves in a circle. Beside the lord of the festival sat the person most distinguished for bravery, rank, or fortune, and thence successively, according to degree, all the others until all of the first class were seated. Round

this was formed a second circle, composed of armed attendants, one rank of whom bore the bucklers, while the second carried the lances of their masters.

#### COSTUME OF THE FRANKS OF THE FIRST RACE.

At the commencement of the fifth century after the arrival of the Barbarians, every thing in Gaul was subjected to entire change. It was no longer that flourishing country almost rivalling Italy in civilisation: it became one vast theatre of bloodshed and desolation. A multitude of nations flowed in from the north, and mixed with the remnant of the Gauls that had escaped the general slaughter, the result of which was an indescribable variety in the costumes both of war and peace. But of these new masters of the soil, the Franks were those who ultimately succeeded in establishing paramount dominion; it is therefore to the modes prevalent among them that we shall address attention.

These barbarians, according to Tacitus and others, were, like the Germans, tall of stature: their hair was fair; their eyes blue and penetrating; skin of extreme whiteness; voice deep; and general manner rude and fierce. They were a daring and indomitable race, courting, and inured to, danger. Their occupations were at the same time pastoral and warlike; they drove before them their flocks with their lances and

other offensive weapons; their food was derived from their flocks; and in winter their habitations were caverns, and in summer huts.

The Franks, in imitation of the Germans, were habited only in a coarse linen shirt, and a small square mantle; to these, in winter, was added a sagum of skins. The chiefs and persons of condition, for the sake of distinction, wore their ordinary attire closely adjusted to the body; but their mantles were unusually ample. At the period of their establishment in Gaul, this people wore a sort of vest or jacket fitting the body, and meeting this, another garment like a pair of short drawers, descending more than half way down the thigh. The body garment had long or short sleeves, and was fastened up the front with buttons or clasps. Over this was thrown a large cloak made of two square pieces, and sufficiently long to descend to the heels; but in front it was shorter, and at the sides it fell only to the knees; sometimes these cloaks were bordered or lined with fur. The Franks of the north made their vestments of skins; but during the heat of summer the cloak was thrown aside: sometimes they appeared even quite naked; but upon all occasions they were armed. On the head they wore a hood or a cap; their buskins, bordered with fur or hair, were pointed, as were also their shoes; both were fastened with bands of the same colour as their upper garments, which were wound transversely round the leg. When the Franks had subjugated the country, they adopted, like the Gauls, the Latin costume. Among the people luxury in any degree was unknown; but with the rich it amounted to a passion, and was the source of numberless crimes. They were esteemed only according to their wealth in rich attire, ornaments, arms, and jewels. Although in private life the dress was generally simple, yet in public ceremonies, gold, pearls, rubies, and sapphires, glittered in profusion from head to foot, upon stuffs of the most brilliant colours, among which blue, white, and purple were the most striking. According to the monk of St. Gall, the ornaments of the Franks of the eighth century were gilded boots or buskins, to which

were attached bands upwards of a yard long wound transversely round the leg, and meeting upwards the short and tight linen femoralia,

Person of Quality — 5th century. After Montfaucon.

which were of one colour and finely wrought. The body covering was a tunic of fine cloth; the sword was suspended from a shoulder belt,

and was contained in a sort of sheath coated with a brilliant and hard wax. Over these was thrown a white or blue cloak, cut in such a manner as to fall before and behind to the feet; but only to the knees at the sides. In the right hand was carried a long staff cut from the apple-tree, and surmounted by a ball of gold or silver, ornamented with figures. The different classes of society began then to be distinguished by the degrees of richness and amplitude of their attire — by the material and the ornaments of the chlamys, the form of which, towards the end of the seventh century, was much altered. Silk was reserved exclusively for the use of princes and personages of distinction: camlet and coarse cloth were in use by the commonalty.

The women were in figure elegant and graceful: their dress was simple enough, consisting of only a long linen robe confined by two girdles, one immediately under the bosom, and the other low on the loins, leaving the breast and arms almost always naked: at a later period women of rank wore a long robe of rich fabric fitting close from the neck to the loins, whence it fell in full plaits principally gathered in front, the neck being often left uncovered. The sleeves were long and tight, and sometimes ornamented with bands of different colours. To this were added two rich girdles: that round the waist was tied very low, and the ends fell to the ground. The shoes and cloak were like those of the men. Unmarried women covered the head with a hood, or with a linen coif plaited, having ends falling on the neck, or with a veil descending even lower than the knees: thus the neck and ears were covered somewhat in the manner of the religious costume. The hair was worn long and usually dyed, plaited into long tresses, or bound with ribands, so as to fall on each side of the face. Among the first races of the Franks, their

Frankish Costumes — 4th century.

Frankish Chief. After Montfaucon.

women often engaged in the *mêlée* habited in black, and having interwoven with their hair the flowering broom; on such occasions, they wielded the lance with address, and animated the warriors by their spirit and exhortations.

Among the Franks in Germany, the military condition was not distinct as a profession: it was the entire nation that took the field. The women took charge of the children and the wounded, and upon occasion mingled in the combat. All the men capable of bearing arms bore their part in the conflict: some appearing entirely naked, others partially clad in the spoils of wild beasts; and a small number wearing scant garments closely adapted to the figure. The young warriors wore on the arm an iron ring, which was only laid aside after some distinguishing act of heroism, which was called the *ransom of the brave*. About the seventh century mail armour was generally worn over a cloth sagum. The chiefs alone had helmets and cuirasses, which were furnished with a skirt, and fittings made of iron or copper scales: and they alone rode horses caparisoned in the manner shown in the cut. The helmets were ornamented with pearls, jewels, crests, and horse-hair dyed chiefly red. At intervals during the eighth century, France presented the appearance of one vast camp, wherein each warrior armed himself in the manner most in accordance with his taste and circumstances. Charles Martel improved his infantry by furnishing them with long lances, that they might effectually resist the Arab cavalry, and appointed for their use head pieces framed of four triangular plates of iron, put together with nails.

The arms of the Franks were the *spatha* (E.), a long and very heavy sword suspended on the left by a shoulder or waist belt—the *framaea* (D.), a short and sharp iron lance, used either in the manner of a javelin or a lance—the double-headed Frankish axe (A.), used either as a battle-axe or hurled at an enemy when near at hand—the sling—a small javelin for effect at a distance (B.), and an extremely heavy mace (C.), which, being thrown among the ranks of the enemy, crushed and bruised all upon whom it fell. Their bucklers of wood or osiers, covered with a thick hide, were painted with the most brilliant colours, and sometimes guarded with iron. The loss of the buckler was attended by signal disgrace. The chiefs alone wore their head-pieces ornamented with horse-hair, or some hideous figures.

Of all the German nations in the time of Tacitus, the Suevi alone wore long hair: their manner of dressing it was to gather it in one or more knots on the top of the head. The Franks adopted this fashion; but on their settlement in Gaul they had abandoned it, for which was afterwards substituted a more remarkable style, that of shaving the whole of the back of the head, while the hair growing at the sides was suffered to grow to great length and to fall upon the shoulders; that in front falling short upon the forehead. With the view of striking terror into their enemies, the Franks, like the ancient Gauls, stained their hair of a glowing red colour. The chiefs alone were distinguished by beards; the mass of the people wore a thick and long moustache.

#### THE ROYAL COSTUMES OF THE FIRST RACE.

The history of the kings of the first race, so barren of chroniclers, is but little illustrated by monuments and contemporary reliques of any value in showing their manners and modes of attire. Gregory of Tours, who scarcely speaks of the predecessors of Childeric, tells us that this monarch, having been driven from his dominions

Norman Soldier.

Military Costume, under Charles Martel.

by the Franks, sought the protection of the King of Thuringia. During his absence his subjects were governed by Egidius; but at the death of Egidius they recalled their king. This is the sum of the known history of the reign of Childeric previous to 1653, in which year there was discovered at Tournay a tomb which not only dissipated all doubts of the existence of a prince of this name, but also determined the spot where he had been interred. In the tomb were found a ring, a sword, a style or point for writing, some small objects supposed to have been imitations of bees, a buckle, and two oval medals, the one bearing a scarabæus and the other a frog. That which served to declare the quality of him to whom the various objects belonged was the ring which bore an intaglio head, with the legend *Chiderici regis*. It was a seal ring, and represented Childeric with the head shaven behind, and the side hair flowing on the shoulders in the Frankish manner of wearing it. In the hand of the figure is a spear, a symbol of royalty. This tomb un-

doubtedly, with respect to historical value, may be classed among the most interesting discoveries of the seventeenth century. It does not, however, afford any satisfactory information on the subject of the earliest times of the monarchy: this is to be sought for only from the effigies of the kings.

From such sources, then, we learn that the kings of the first race borrowed from the Romans the various components of their costume; thus they are found habited in the tunic, the toga, and the chlamys; the last of which the Romans wore generally in the country; it differed from the toga only inasmuch as it was shorter. The manner of wearing it was to fasten it on the right shoulder by a buckle which attached the two sides, leaving the right arm free, but covering the left, which could only be used after raising the drapery. Following the example of the German nations, the kings wore also a kind of pallium—a mantle open before, and resembling that of the ancient Greeks. The Roman

## TWO VISITS TO WESTMINSTER HALL.

By Mrs. S. C. HALL.

tunic was short, and had sleeves covering the arm only to the elbow; on the contrary the tunic of the Frank kings descended to their feet. This garment was confined by a girdle with long ends, an addition to the dress which by the queens of the first and even of the second race was enriched with jewels. The manner of dressing the feet was very simple. Chlovis alone is represented with his feet almost entirely uncovered, an infraction of the established custom which was occasioned by a particular circumstance in the life of this prince.

According to Gregory of Tours, Chlovis having received from the Emperor Anastasius the codicils of the consulship; was invested with the purple, assumed the chlamys and the diadem, threw gold and silver among the people, and from that time was entitled Consul and August. It is probable that he adopted other types of the consular dignity, and wore from the time of his inauguration the costume of the emperors of the East; and thus it is that he is represented at the entrance of the church of St. Germain-des-Prés, as also in Notre Dame de Corbeil. The head of the figure at the latter church was surrounded by a glory or nimbus, spoken of by the poets and historians of antiquity as distinguishing the heads of the gods and the emperors. At the early period of modern art, the use of the nimbus was revived, being thrown round the heads of the Saviour, angels, and saints. This manner of giving effect to the portraiture of the Frankish kings distinguishes generally the effigies of those of the first race, but was afterwards discontinued and seen only round the heads of kings whose names have been associated with those of the saints. Also at the church of Notre Dame de Corbeil was the effigy of Chlotilda, the wife of Chlovis, whose head was surrounded by a nimbus, and surmounted by a crown of annular form. The girdle was enriched with precious stones, and the hair descended in long tresses even below the knee, declaring it a royal distinction thus worn, and not less carefully preserved by the queens than the kings of the first race.

Among the ancient monuments of the French monarchy, few perhaps are as curious as those in the part of the old tower serving as a principal entrance to the church of St. Germain-des-Prés. Of these, there were eight, four on each side. Of the four on the left side one was that of the Bishop of St. Remy, who was represented treading upon a monster—an emblem of idolatry, because he had contributed to the conversion of Chlovis, whose image is the next, being remarkable for the form and richness of its attire; the third is Queen Chlotilda, and the fourth that of Chlodimir.

The robe of Chlovis descended to the ground; his ample and long mantle or chasuble had but one opening intended, for the head to pass through, and his sceptre was terminated by the consular eagle. Chlotilda wore a robe closely fitting the body but sufficiently ample below, round which were two girdles, one worn tight, immediately below the breast, and the other loose, placed much lower, and having ends falling below the knee and terminating in a tassel of three cords. The mantle, which is not very full, descended in front to the knee, but dropped to the ground behind. The throat was ornamented by a large jewel, and the long hair, tied at intervals, fell in such a manner as to leave the ears uncovered. The crown was decorated with scrolls, in some sort resembling the *fleur-de-lis*.

The four figures on the opposite side represented Thierry, Childebart, Ultrogthe, and Chlotaire; and with these monuments may be classed those of the church of St. Germain-l'Auxerrois, as also others in Notre-Dame de Paris, disposed in the manner of those of Saint Germain-des-Prés.

Two effigies of Merovingian kings were also

sculptured upon two of the columns which sustain the cloister of St. Denis: one of these wore a large mantle, and a girdle with pendant ends. The costumes of the kings and queens of the first race resemble in general those of Chlovis and Chlotilda, and differ from them only in inconsiderable items of the detail. Of the different statues of Dagobert, the son of Chlotaire II., which have decorated the church of St. Denis, the most ancient and the most worthy of attention is one which Montfaucon thinks was made at the death of Dagobert, or perhaps during his life. He is represented seated, habited in two tunics of unequal length, the first of which, shorter than the other, is drawn close round the upper part of the body, which it envelopes up to the neck. An ample chlamys, fastened at the right shoulder, covers the whole of the left arm. The crown, of the annular form, is but little remarkable for its ornament. It was after the death of Dagobert that the mayors of the palace arrived at the supreme power, and usurped its honours and advantages, leaving to the degenerate princes only the name of royalty.

Montfaucon in his *Monumens de la Monarchie Française* says that in 1704, while the foundation of the great altar of the church of St. Germain-des-Prés was in progress, there were discovered at the depth of six or seven feet from the surface several stone coffins, one of which, larger and more elaborately ornamented than the others, had a lid forming an angular ridge with sloping sides and carved in imitation of scales. Montfaucon thought this was the tomb of Charibert, and desired to see it opened, but the superior of the abbey refused his consent to this; the coffin was therefore replaced and covered with earth. However in the year 1799 several intelligent antiquarians were commissioned to institute a search in the place pointed out by Montfaucon, the result of which, according to M. Alexandre Lenoir, one of the commission, was the discovery of a skeleton in the coffin alluded to, having the feet turned towards the east. The draperies with which it was covered formed two garments: the first of these, in good preservation, was a long and full mantle lying in folds which descended to the feet. The material was satin of very substantial fabric, and inwrought with a large pattern; its colour, although faded, appeared to have been of a deep-red. The second garment was a long woollen tunic, of a brownish-purple colour, ornamented at the bottom, with embroidery also in wool and figured ornaments. On the feet were slippers of well-tanned black leather, without ties or buckles, and having only one seam on the outside. On the right side of the skeleton was found a staff, supposed to be of hazel: it was about six feet long, and crossed at the top, in the form of a crutch, by a piece of ivory carved in a taste which might be pronounced as of the eighth or ninth century; this was fixed to the wood by a socket of copper similarly wrought. The whole of the circumstances, therefore, indicate the remains not of Charibert, but of the Abbot Morard, superior of the abbey of St. Germain-des-Prés in 990.

On the same occasion, another sarcophagus was found simply closed with a flat stone lid, on opening which a skeleton was found with appearances warranting the supposition that the body had first been placed in a wooden coffin. The crosier, ornamented with scrolls and leaves, was of wood, and lay on the right of the body. The bones were covered with a garment made of dark-violet taffeta, resembling the habit of the order of St. Benedict.

[We shall from time to time continue these notices of French costume down to a late period. For the power to introduce into our pages this series of wood-illustrations, we are indebted to the courtesy of the editor of the "MAGAZIN PITTORESQUE," who, in the most generous and liberal manner, has placed them at our disposal.]

Our first visit to the cartoons was on the day of the private view, and, knowing how many opportunities we should have for inspecting them, we were more anxious to ascertain how the exhibition was received and appreciated, and what impression it made upon the critics and connoisseurs, than to think and judge of the merits of the respective drawings. The sun was shining brightly, and Palace Yard was filled with equipages,—such as London may show against the world. The Old Hall, as we entered, had an astonished look, as if surprised into something new and extraordinary—something quite different from what it had been accustomed to. Numbers of well-dressed individuals (and there were none others) did not seem quite to understand what it was they came to see; and looked up and then down, the double avenue of cartoons, as if some mighty spirits from the old world of art had taken Westminster Hall by storm: people had seen the cartoons at Hampton Court, and perhaps had heard "German talk" of cartoons, and many had seen cartoons abroad; but no one seemed to anticipate that there were heads among us to conceive, and hands to execute, cartoons of the heroic size, fit, not only to be seen, but to command attention, and excite astonishment. As the visitors on that day belonged to a class in society too well-bred to whisper, their observations were made aloud; and certainly nine out of ten expressed the warmest satisfaction at the exhibition. There was a feeling of "See what Young England can do when it has a chance of triumph!" Bright eyes looked brighter, as they guessed who the artists were; and some sad eyes, worn out by hard and heavy labour, said in their own language, "If I had had such a chance as this in my first days, I should not so often have looked down to the end of all things." Nobles, and artists, and critics, and literary men and women, promenade the Hall during the entire day.

The Marquess and Marchioness of Westminster were there at an early hour, paying attention to each drawing, and again and again revisiting those which they most admired. There was Mrs. Norton, beautiful beyond all painting, her large sleepy eyes, brightened by the wit of Rogers, and the interest she took for a moment either in the spectacle or the spectators. There was Mrs. Jameson, whose clear, careful, industrious mind has enriched our literature, while making us better acquainted with art—keen at discovering perfections, and more merciful than usual to the many imperfections which glared about her. There was Mrs. Opie, the widow of a master in his art, who associated with Reynolds, and West, the fiery Barry, and the dreamy Blake,—we have met her in the library of Cuvier, and the simple but crowded *salon* of Lafayette,—one, who of the past is still with the present, and who joys in the excellence which she has heart and feeling to appreciate. There was the poet Milman, and the one great actor, who has never worn breast-plate brighter than his own honour—the drama's hope, almost the drama's victim, treading the hall, and generously proud to see that one art, at all events, has at last received fair play in England.

Critics were knotted together like fiery serpents, and, despite much that was poor and painfully unfinished, so overwhelmed by the good, that to their astonishment they were warmed into a healthful generosity of feeling surprising to themselves, and beneficial alike to their constitutions and the prosperity of the cause which originated the competition. We heard one high-born person say, "Can this (it was Cope's Trial by Jury he was gazing at) have been done in England?" What a moving picture of glory, and art, and ambition, and the future of all, was that titled and well-born multitude, varied as a bed of tulips, and contrasting so strangely with the grey and sober tones of the drawings, and the noble roof of the mighty hall, accustomed to look down on the be-wigged and murky lawyers, and hear the muttering of dingy law-hunting clients, and occasionally the sharp banging of the doors, the only sound that wakes an echo there. What a mass of living human power and intelligence was congregated within those walls! Some, who are known over

the whole world as heroes and statesmen, but upon whom the hand of time presses heavily, who are passing away, and a few brief years, or perhaps months hence, will be portions of their country's history; others—the young *futurax*—whom we hope for, and with, rather than trust, for before we trust we must try, but we do hope—the hope “that brightens days to come.” There, remarkable amongst a thousand, was the pale acute face of Lord John Russell, whose noble brow seems to contain a sufficient quantity of brain for six strong men. It was curious to glance from his to Mr. Hume's solid and accurate features, and then at the Duke of Sutherland's clear, calm, aristocratic outline, or Mr. Wyse's earnest and eloquent face, speaking without the aid of words. The President's Irish voice, Irish without brogue, caught our ear; but in turning to look for him we saw MacIse, wandering from point to point, too lazy to take the trouble to condemn, but never too lazy to approve what is worthy; there was Leslie, down-looking, smiling at his own or other's fancies; and Uwins, with his clear eye and accomplished mind; Etty, whose heart is as great as his head; and Wyon, whose native gentleness and powerful art moulds the hard metal into grace and softness. All the art-patrons, too, were congregated, and the art-strength of young England—Men, whose pictures had seldom been appreciated, because so seldom hung to be seen; but whose powers now had been acknowledged by the best judges in the land: how proud they looked, those young ones, keeping down that pride too, with an assumed modesty. To name all of worldly distinction who were there, would be to transcribe the names of the *élite* of the court guide; and surely never was such an assemblage of feathers and flowers, and laces, and two and three little founced petticoats over long petticoats; never such crushing and rustling of silks beneath the canopy of the old hall since the very, very old time. It was pleasant to be in the broad sunlight again, for the heart will ache with satisfaction as well as sorrow, and ours did beat, for we had witnessed a great day for ENGLISH ART.

Our next visit to the cartoons was made with a design to inspect them; and, moreover, we were anxious to see how the people behaved on the “free days.” We drove to the gate of the Hall about four o'clock on Wednesday, the third day of the “free list”; the gate was shut, the crowd within, the policeman said, “was so great that he would admit no more until it lessened; there was no moving within.” We took our place, resolved to wait our turn, and certainly it was a “motley” throng; carriages of various degrees continued to set down “company,” while “the people” increased rapidly; the birds, whose nests have been made from time immemorial in the cornices and frieze-work of the building, anxiously hovered above the heads of the restless crowd, screaming and twittering as if they feared some assault was meditated on themselves. We had ample leisure to contemplate the throng, and to think over the various acts and deeds which had taken place within those doors. What records and what memories! And how completely the purpose to which it is now appropriated is in keeping with the times. When nation fights against nation, and every man's hand is against his neighbour, the arts are trampled under foot; it is only when fostered by peace they flourish; it is then, forgetting all petty distinctions of name and country, they exult in the beautiful and the true. At last the gates are opened: on we rush! Why will not people wait? and yet the crush and the selfishness of a crowd were surely not developed as strikingly as on a benefit night at the Opera: one rough unshorn artisan “begged pardon” of a lady whom he pushed against; and though all tried to get in, they did not wish to elbow or eject each other. It was really delightful to witness the pause after the rush,—to see the interest evinced by “the people” in the exhibition. The Hall was still so densely crowded, that we wondered we were admitted so soon; there was no loud talking, no vulgarity; we did not hear a single expression to give pain. Children sometimes cried, and once when a little urchin made a great noise, his mother lifted him up, and pointing to Haydon's “Satan,” said, “there's the black gentleman, he'll come and take you.” “No,” answered the urchin, kicking more violently than ever, “he ain't

black, he's grey-like.” Another woman expressed her indignation, that Lady Jane Grey should have been permitted to see the headless body of her husband; and addressing a companion said, “it was wicked to make a picture of it, it was too melancholy for a picture.” The woman was of the lowest class, her bonnet flattened by the pressure of many a load, and her hands ridged with labour, yet when she turned away, there were tears in her eyes. Scores of the humbler classes were peeping over the shoulders of those wealthy enough to possess a catalogue, anxious to read the subjects of the pictures; and much did we regret that a sheet catalogue which could be sold for a penny had not been prepared, so that the class evidently so desirous of information might have been able to take a memento of the first free national exhibition to their humble homes. For ourselves we anticipate the best results from such a source of pleasure and instruction being opened to the lower class, from whom we have hitherto shut out everything that could civilise and improve—and yet we complain of their want of refinement. It was only as far back as the year 1818 that Sir George Beaumont commenced an “agitation” in favour of a national gallery for paintings. This noble and delicately-minded man urged on the late Lord Dover to propose the idea to the House of Commons, coming forward with the inducement, “I will give my own pictures to the nation as soon as there is a proper place for their reception.” Lord Liverpool favoured the proposal, but shook his head at the expense. Lord Farnborough, the Earl of Aberdeen, and the Regent approved, and yet it was considered a dangerous experiment. Government has always been slow to encourage any power except “the political” and the warlike in England; but the death of Mr. Angerstein and a dread that some foreign power might take possession of the collection quickened the tardy, and the Angerstein pictures became the nation's property: in the year 1823 Sir George Beaumont had cause to rejoice at his perseverance; and in a letter to Lord Dover he expresses an opinion that the seed then sown would bear a liberal fruitage.

“Our friend Knight has informed me that parliament has resolved upon the purchase of the Angerstein collection; and as I shall always consider the public greatly indebted to your exertions, I hope you will pardon my troubling you with my congratulations. *By easy access to such works of art the public taste must improve, which I think the grand desideratum.*”—“*I think*,” he adds, in another passage, “*the public already begin to feel works of art are not merely toys for connoisseurs, but solid objects of concern to the nation.*”

Twenty years have elapsed since this first great move; the second has hung a specimen exhibition in the glorious old hall of Westminster, and given, not lords and commons only, but all classes and degrees, the power and the privilege of looking and learning: it is, in truth, a mighty move; a recognition of a duty done to a people to provide them with rational amusement—to elevate them, not only in the moral, but the poetic scale—to lift them out of the mire of ignorance, of degraded tastes—and show them how they, as well as the higher born, may be proud, not only of our armies, our argosies, and our manufactures, but of our native art. The police, whom we questioned as to the uniform conduct of the people, spoke of it in the warmest terms. “They have given us no trouble,” said one, “except in trying to keep them out, when the hall is too full, and the only plan is to shut the gate; they take a long time, and examine every drawing, and go away, almost invariably, much pleased.”

We observed, on our first entrance, two men, certainly the dirtiest in the multitude. We imagined they had escaped from a tan-yard. One was tall, and thin, with a very long neck, pallid face, and deep-set eager eyes; his friend was little, and stupid. The tall man would fold his arms over the short one's shoulders, as you do round a child's neck, and taking every figure of the cartoon separately, examine and describe it, according to his own ideas, to his friend; and getting sight of some fluttering catalogue stretch over his crane-like neck, and gain as much information as he could of the subject. We never saw any thing

• This, we rejoice to say, has since been done.

like his eagerness to understand; it made us quite forget his “outward man.”

There was a reality in the people's wonder, an awakening and lighting up of a new interest, a respectful attention, rather than an idle gazing, that sent us home with a rejoicing heart, and an earnest prayer, that many such rational sources of amusement may be opened to the people, whom it cannot fail to enlighten and improve.

It would occupy much space to trace the various ways in which works of art influence those who look upon them; exercising a power over the imagination and the memory, which it is hardly possible to overrate, educating the heart, and informing the mind, through the medium of the eye; they set the most striking point of a history, or an event, at once before the observer, who is naturally led to desire, and consequently to obtain, more knowledge than he has hitherto possessed. A picture will make those think who never thought before. “Who was Lear?” we heard a woman inquire of her husband, as she pointed to Mr. Pickersgill's fine cartoon. “It's played at the Theatre,” was his reply; “but the History of England tells all about that, and a many other things here.” It is not too much to suppose that this trifling circumstance directed the young woman's attention to what, had she not seen the cartoons, she would never have thought of, and a new interest was awakened in her mind, a curiosity excited, which could be gratified at home, and keep her away from “penny hops,” and public-houses; and let us remember that the humbler classes have few enjoyments—that it is not only the very low and the depraved who enter gin palaces.

We are convinced that *thousands* would spend their one or two leisure hours in public exhibitions, in preference to public-houses, if they had the privilege of doing so. The Scripture subjects, or, as they called them, “Scripture pieces,” excited perhaps the most interest—all could understand the Adams and Eves, the Sampsons, and angels; eager eyes were directed towards them, and we observed one rough-looking man remove his hat while he stood opposite Haydon's “Curse;” the poor fellow was evidently compelled to do so by some innate feeling of veneration which he was all the better for having had excited. Care must be taken to present the best models to a people whose taste is to be formed—for on this much of the future depends; if they acquire a false or impure taste, the fault will certainly rest with those who permit them to imbibe such;—the work is well begun;—viewing, perhaps as we ought to do, the National Gallery as its commencement, we ought to say, well continued. We shall learn to depend more on ourselves now, in matters of art; and why should we not? Have we not had those whose very names are immortalities? From the heap let us select one—FLAXMAN. Why, every head in the universe of art bows to the sound; and there were living and breathing within those very walls the other day, men who have done great, and will do greater things, and to whom we may look with confidence to establish and render immortal as any other—an English School of Art.

It is very delightful to trace this movement, as it must be traced, to his Royal Highness The Prince Albert. James I. crowded his court with Scotsmen—George I. patronised only those of his country—and history affords abundant examples of princes and princesses thinking only of their partisans, and not of those among whom their lot is cast. We are, indeed, fortunate in the husband of our gracious Queen. It is the glory, and reputation, and improvement of *her* country, that is sought by his Royal Highness. He is leading the young nobles of our land away from the stud and the gaming table; and, by the force of his example, elevating their tastes, while indulging all that is high and worthy in his own. If he had been born in Kensington Palace, he could not be more essentially English than he is, in all desire to do us service: his taste is graceful and refined, and already do we owe him a deep debt of gratitude; his patronage of English Cartoons is a most decided proof of this, for it is the very walk of art in which the Germans are believed to excel; it is impossible to overrate the zeal with which the Prince enters into all projects connected with the intellectual advancement of the people, and we can hardly feel sufficiently grateful for having such an influence exercised in such a manner.

## CORRESPONDENCE.

## OLD LONDON WALL.

SIR,—On the west side of a vacant plot of ground in George street, Tower-hill, and behind the houses in Trinity square, stands one of the most considerable remaining portions of the wall which was anciently built for the protection of *Londonium* (probably at the commencement of the fourth century), and which for some time was considered of the utmost importance, and kept constantly repaired. As, however, the number and power of the citizens increased, they outgrew their shell (it was but a small one), and the irruptions of barbarians ceasing to be frequent, this protection was considered of less and less consequence; until at last, as Camden observes, the Londoners slighted fenced cities, as fit for nothing but women to live in, and looked upon their own to be safe, not by the assistance of stones, but the courage of its inhabitants. Year after year has witnessed the gradual destruction of the remains of this ancient enclosure, until, with the exception of a bastion in Cripplegate Churchyard, the portion behind Trinity-square, of which I am about to speak, a continuation of it forming the back wall of Mr. Atkinson's hemp warehouse in Cooper's-row, and a few inconsiderable fragments to be found in the street to which it gives its name, it has been entirely swept away.\*

The portion in question is also now threatened with destruction; and the object of this communication is, in aid of other efforts which have been made, to induce those who have authority to reconsider the matter, with the view of avoiding this objectionable step if possible. It is intended to build a church on the vacant ground in George-street, with the special object of affording accommodation to the masters, officers, and seamen of the ships in the docks and the river; and it is considered that the site of the old wall "is essential for the satisfactory completion of the church." A memorial was presented to the Common Council from members of the Metropolis Churches Fund, in February last, praying them to "grant permission for the removal of the materials of the wall, and to convey to her Majesty's Commissioners, for building additional churches, the ground on which the wall now stands." This the Common Council granted; so that the fate of the wall is decided, unless those gentlemen in whose hands it is placed can be led to regard the subject in a fresh point of view. Their object is unquestionably an excellent one: far be it from me, even if I had the power, to throw the least impediment in the way of it. The gentlemen who are interesting themselves in effecting it are of undoubted character and worth, and I cannot help concluding that the proposal to destroy the wall was made in the first instance without serious consideration, and that, now public opinion has been strongly expressed on the subject, other means will be taken to obtain sufficient ground for their purpose, or that the plan of the proposed church will be altered so as to adapt it to the land already in their possession.

The length of the wall is 48 feet, irrespective of a part of it which forms the end of some adjoining premises: the height next Trinity-square is from 20 to 25 feet, and the thickness, as nearly as can be estimated, about 6 feet. In times less eminent for the preservation of ancient monuments than the present day, it was coped with brickwork, and strengthened at the northern angle, and is consequently in a tolerably good state of repair. It is faced on both sides with masonry in courses (the interior being of rubble work), and shows occasional layers of Roman bricks. On the west side the facing consists in parts of alternate courses of square and flat stones, and the Roman bricks are few in number and very irregularly placed, so as to lead to the belief that it was reconstructed perhaps in the Norman period. On the other side, however, some vaults which adjoined the wall having been destroyed and the ground cleared away, a considerable portion is exposed to view—which is doubtless the original Roman wall, probably not less than fifteen hundred years old, yet still quite sound and perfect. The masonry is of broad squared stones, systematically bonded; and there are two or more continuous double layers of Roman bricks, agreeing precisely with other remnants of the original wall described by various writers. Dr. Woodward, who examined part of the old wall in 1707, when some houses were pulled down in Camomile-street, measured the bricks which were in it very accurately, and found them 17 4-10 in. long, 11 6-10 in. broad, and 1 3-10 in. in thickness. The bricks in the wall now in question, measured without remembrance of Woodward's dimensions, I noted as 17 in. long, and 1 1/4 in. thick. The double layer, including the mortar between the bricks, measures altogether 4 1/2 in. From the top of the lowermost layer, or that next the ground, to the layer above it, the masonry measures 3 ft. 6 in.; from the top of this up to the next double layer, the masonry measures 2 ft. 7 in.

Of the value of this interesting relic of antiquity, the desirableness of preserving it as a portion of the past for the service of the future, I would speak strongly. Monuments of this description become historical evidences, nationally important, and are continually found to be of the greatest service when tracing those changes in our state and manners which time is constantly

effecting. They are links in a chain which connects the present with the past—awakeners of sentiment, silent teachers—and have never been destroyed without much after regret and condemnation.

"Past and future are the wings  
On whose support, harmoniously conjoined,  
Moves the great spirit of human knowledge."

The importance of the study of antiquity, notwithstanding some few apparent proofs to the contrary, is now very universally admitted. "It was at one time the custom, amongst the people generally (as the writer has elsewhere ventured to remark), to reward the labours of the antiquary with ridicule and contempt—to consider the investigation of a ruined building, the preservation of a piece of pottery, or the noting down of the manners and customs of past ages, as the mere idlings of weak minds; and that he, who so employed himself, was not merely unworthy of praise, but deserving of censure for misapplying time. The value of the works of this class of men is now, however, better understood, and therefore more duly appreciated. Through the exertions of these 'musty' antiquaries, the civilised world is able (if we may so speak) to look back upon itself, and contemplate, in a great degree, its actual state, so far as regards the Arts which flourished, the sciences which were understood, and the consequent position of the people, at various periods of its age; and that, too, not merely in the accounts of contemporary and succeeding writers, but in the very results of these Arts so practised—in the coins used; the dresses worn; the furniture employed in their houses; and the buildings raised for ecclesiastical, for warlike, or for domestic purposes."

The architecture of a people especially offers important evidence, in the absence of written records, towards the elucidation of their history; perhaps we may say the most important, for it speaks plainly of the state of society at each particular period, and hints at the degree of knowledge possessed by individuals, or by the people at large. As the comparative anatomist can from one bone determine the size, the shape, and the habits of an animal, which he has neither seen nor heard of, so may we almost discover, from the ruined buildings of a people, their prevailing habits, their religion, their government, and the state of civilization to which they had arrived.

Not to digress, however, from the immediate subject of this communication. The proposed demolition of the remaining portion of London Wall affords another instance of the advantage that might result from the establishment of a public board for the preservation of our ancient monuments, similar to the *Comité Historique des Arts et Monuments*, of Paris, who, when local requirements threatened the destruction of what in reality belongs to the whole nation, might interpose their authority, and prevent the contemplated injury. In the present case it is to be hoped that the Society of Antiquaries will not fail as a body to use their influence for the protection of the wall. At a recent meeting of the Royal Institute of Architects, the writer, at the request of a large number of gentlemen, brought the matter under their notice. The Marquis of Northampton, who was in the chair, expressed a hope that the wall might be saved, and suggested that the Council of the Institute should communicate with the Society of Antiquaries, with a view to the presentation of a joint memorial on the subject. The Council of the Institute adopted the suggestion, and it is to be hoped that such a representation will consequently be made to the excellent gentlemen with whom the fate of the wall now rests, as to lead to its preservation whole and uninjured. Whether so or not, the writer feels he has but performed a duty in raising his feeble protest against the destruction of a most valuable and interesting memorial of the early history of the City.

GEORGE GODWIN.

## THE FRESCOES OF SCHNORR.

SIR,—In p. 149 of the ART-UNION, under the head of "Rapid Work," it is said, "Schnorr, with the aid of his assistants, completed in three months six fresco paintings, each twenty feet long." The authority is the "Kunst Blatt" (a very respectable one in some points of view. I wish I saw it regularly now). Now, what are these "assistants?" Some are accomplished artists, i. e., men, it is true often young men, who design and execute their own works—there being parts allotted to them in harmony with the general design of the great master (Schnorr); the subject and character being given forth from him. But they are not usually employed on the "great frescos," but on the minor pieces and accessory detail. I know one of them who did—and did very creditably—20 or 30 feet of work in this way without any interference on the part of Schnorr, save an approval, a kind of "I have settled and do approve," &c. Others of the *employés* are men well skilled in the mechanical part of the painting (the paintings alluded to are *encaustic*, not fresco), and perfectly equal to carry out those parts of the work intrusted to them, especially as Schnorr supervises and touches up. The "manufacturing system" you smile at it, if properly managed through a properly educated class of men, is not a bad one—if my humble opinion (I admit grounded on small means of judging) be allowed to be offered. But in England I doubt of its adoption or success. Again, why remark on the "mus-

tachios?" This is frequently the only redeeming "feature."

Did not Raffaele use his pupils? did not Rubens, in fact, did not all the ancients? Do not many of the moderns with success, and without umbrage? Reynolds did to a great extent.

But I am now to tell you what I wish in my soul I need not. Schnorr's great paintings, especially those done latest, are, and bear on their faces signs of being, great manufacturing jobs! Hurried by his "contract" with the king—having undertaken what he must have known he could not creditably perform—he has produced *unconsidered, undigested*, uncorrected works, which many a German artist deprecates as erroneously looked upon as specimens of the "German school." The grouping is forced and often stale; the drawing bad; the execution careless: but perhaps in two or three years it will all peel off—some have done so already. I heard it a short time ago canvassed by some German artist, whether "Schnorr would ever recover style after having been engaged in this picture-making."

I am, &c., J.

## HILTON'S 'ST. PETER.'

SIR,—In your last number a sale of pictures was announced to take place in August, belonging to Mr. William Bishop, of Plymouth, a gentleman well known as a strenuous advocate and liberal purchaser of the works of British artists. This collection, among many distinguished works, contains, I observe, the celebrated picture of 'The Angel delivering Peter from Prison,' by Hilton. Every one familiar with the exhibitions of the Royal Academy must recollect this noble work, assuredly one of the finest ever produced by the lamented artist, and so fitted in effect and dimensions to adorn a great establishment that it cannot but excite surprise that it was not purchased for a church or public hall, instead of being allowed to find its way into a private collection. The proper destination of such a work, I should say, is the National Gallery. The specimen of Hilton contained there is certainly a very agreeable one, but it is too small to admit of that full development of grand conception and executive power manifested in 'The Angel and St. Peter.' The picture is a fine example of genuine historic style, being equally free from the meagreness of the earlier schools and the careless exuberance of the latter; and, at a time when the attention of our rising artists will, happily, be directed towards the performance of great historical works, it would form an invaluable object for their study and contemplation.

I am, Sir, your very obedient servant,

AN AMATEUR.

[We perfectly agree with our correspondent, and earnestly hope so fine an opportunity of augmenting the National Gallery will not be lost.]

## PATRONAGE OF BRITISH ART.

SIR,—I beg to ask, whether you consider that the Art-Union of London is justified in purchasing for a prizeholder the work of Mr. Jacobi, which, it appears, they have purchased. For my own part, I think the Committee have acted not only improperly, but illegally, in having made this purchase. It is far from my wish to say or do anything that can prejudice this Institution, which, to my knowledge, has produced immense benefit; but I think it right we should have your opinion on this subject.

Your obliged and faithful servant,

AN ARTIST.

[We certainly cannot consider the Committee justified in having made this bargain. If it be not actually opposed to their laws, it is at least opposed to the spirit of them—to the very principle of their existence: "to advance the interests of British Art." We say nothing as to the merits of the picture, whether it is calculated to improve or deteriorate the public taste; we know that these glaring out-of-the-way whimsicalities have their admirers, and the "prizeholder" may really have been persuaded that he has actually gained a prize; but we have now a precedent for the importation of ship-loads of unvendable works of Art from Germany and France. We know full well that, for some reason or other, it was determined Mr. Jacobi's picture should not leave the walls of Suffolk-street unsold. A desperate attempt was made to sell it at Manchester: it failed there: but has been thrust upon some silly wight as of the actual value of £200—nay, 200 guineas! For it would appear that, although lucky Johnny Newcomb's prize was only 300 pounds, the artist, or his agent, would not bate a penny—200 guineas!]

## TRAFALGAR SQUARE.

THE works directed to be carried on under the inspection, and according to the plan submitted by Mr. Barry, are we believe, now fast approaching their completion. Unless they have been subjected to alterations, these may be considered as comprising in their main features the formation of a terrace on the north side in front of the Gallery, 165 feet long, and 32 wide, with a flight of steps at each end to the area below. This terrace is proposed to have also two large oblong pedestals for groups of sculpture, and circular ones for candelabra, at the foot of the flights of steps and the angles of the square towards Cockspur-street and

\* For interesting particulars of the old wall, see Strype's edition of Stow's "Survey," chap. ii., p. 7. Also Knight's "London," vol. i., p. 160.

\* "The Churches of London," vol. ii.

the Strand. The wall and balustrade of the terrace will be 14 feet high. The north and south sides are to be enclosed by ornamental stone fronts; and the area of the square covered with asphaltum. By this means it is hoped to give (and "Barry told the flattering tale," an increased apparent height to the Gallery. How far however this will be realized, can be determined only by actual survey. The want of elevation in the National Gallery, the littleness of all the features, and the number of parts into which it is divided, are so many circumstances which stamp it with an insignificance that neither stilting nor decorative ornaments can entirely remove. You may make it less ugly, it can hardly be made great; never indeed was so fine a spot for architectural display, and obtained one at such great cost, so utterly thrown away. Architects, men of taste, sculptors, and the public, if not discriminative, at least discordant, generally, in opinion on such points, have condemned the Wilkins National Gallery with a wonderful uniformity of censure; and justly so: it will bear neither improvement nor criticism. Nor has the evil rested here; instead, we submit, of bounding the area so obtained by masses of buildings possessing great breadth of effect, exhibiting uniformity and design, one pile has been added to another, and stucco called in to foil the ugliness of stone. Let any one survey the scene. Towards the east arises a row of houses, the façade of which straggles towards heaven, with not one feature, except "Morley's Hotel," in gold letters, upon which the eye can rest with pleasure; and this is crowned by roofs displaying every variety of zinc tubes for the cure of smoky chimneys. On the west we have the Union Club and the College of Physicians; intended, doubtless, to convey the impression of one building. And how is this effected? The mass is divided into a vast surface of white and black; life and death, the very symbolism of the antagonist principle of the Club and the College. What indeed can bear, externally, more evident tokens of its employment and use than this latter edifice? Nothing living;—but the old lady, and the bird in the cage beneath the portico, was ever seen within its walls. The door is opened, it is said, by the shade of the Animated Skeleton, and the M.D.'s are attended by the ghosts of their departed Fellows. It is the Morgue of London, the *tabooed* corner of west-end civilization. It is essentially medical: the very draughts which sweep across its threshold are black. But are there no commissioners? Surely, if the Union flaunts like a bride in white, the College should not be allowed to turn its back upon its fair neighbour in a rusty suit of dingy black, like a sulky and disconsolate undertaker. Would not the street-effect be greater if the contrast were less? We are fond of change, but not so absolutely from cleanliness to dirt. It was the custom some short time since, to send out pills—we are not sure that it was an invention of Morison's—in boxes of black with white rims. Contra. This was singularly typical of the results consequent upon taking their contents, but was not the idea borrowed from this spot, the contrast hence suggested?

But the principal feature of the square, if not according to Euclid, at least according to Railton, is the column. The height of this will be 170 feet, instead of 203, as originally planned, being 22 feet lower than the spire of St. Martin's Church. Mr. Barry's opinion of the effect it would have upon the Gallery is now entirely borne out. Viewed from Whitehall, the stylobate conceals the entire centre extending to the columns in front of the gateways in breadth, and nearly the whole height of the podium; looking from the west side, indeed, from Whitehall, nothing can be less imposing than the broken niches of buildings that first meet the eye; to which no distance can lend enchantment, except the Irish one—the distance out of sight. Yet we do not condemn the Nelson Column for hiding the National Gallery: upon the contrary, we are grateful. A walking-stick, a scaffold-pole, or the respectable old lady who once sold fruit upon the same spot, would produce a similar effect. The elevation of the National Gallery would be diminished by a row of pins. But in what manner will the column be completed? Some objection has been raised to a possible donation of the surplus metal for the City monument to the Duke of Wellington, for the purpose of the Nelson memorial, on the ground that cannon taken at Waterloo should not decorate the column of the

Hero of Trafalgar. For ourselves, we are not so nice-minded. The object is a national one, the hero British, and if the metal be French, it is properly used upon a Nelson trophy. We are further to consider the necessity of the case. In what state are the funds. The sum subscribed in 1840 was, we believe, £18,000; the estimated expense for the entire completion of the column £28,000; to include the bas-reliefs, and the lions of granite at the base. There was *then* a considerable deficiency, which we know not whether the liberality of the public has made good. Surely it is a point of honour to raise a becoming tribute to Nelson; surely the position being the most favourable for any national work of Art, we ought at least to exert ourselves to save one from the wreck of taste around. And the Boccia light—is that still to be considered as a public exhibition; a monument of parochial or Woods and Forests authority? Is it to be improved, or indicated? As regards its top, we have no hesitation to state we consider it remarkably light—with respect to its base, extremely heavy; but is it to remain, is Trafalgar-square to have the benefit of its existence, as a foil for ever? If it be a public convenience, it should be made a public ornament. If neither, removed. No metropolis in Europe possesses finer opportunities for street decoration; yet there is not an open space, circus, square, or oval—made, purchased, or accidentally acquired—that is not instantly, we know no fitter word, churchwardened. A foreigner would conceive the English idea of a public monument to be invariably a lamp-post, or a Bridge-street obelisk; and whilst charity would teach him what he should forget, St. Paul's and the Abbey could afford him the best examples of what he should avoid.

We propose to continue our notices, not only of exteriors, but interiors; to direct attention to points of immediate interest, public works, and progressive improvements, and, whenever we can, of taste. Upon this last topic, we fear we shall have but little cause to apologize for intrusion.

Q.

#### THE INSTITUTE OF THE FINE ARTS.

We may consider the Institute as formed. It enrolls, we understand, above 200 members; and it is not unlikely that number will be doubled during the present month. For ourselves, we feel compelled to speak of it with considerable caution—a caution not arising from disrespect; but because we are really unable to arrive at any positive conclusion from a knowledge of facts—other than those supplied by the prospectus that has been submitted to us, and which introduces us to no names except the solitary one of "James Fahey, Hon. Sec."

As, therefore, it is ushered before the world under no auspices calculated to secure attention, it follows as matter of course that it rests its hope of success merely on its own merits—the good it will produce to the artists, collectively and individually.

Let us not be mistaken, however; we know many members of the council; and cannot hesitate to say that their association with the society must entirely remove all idea that anything but the best "intentions" exist. They are gentlemen—several of them at least—whose high characters and distinguished talents would confer honour upon any society.

But we question if STABILITY can be secured without the co-operation of individuals who are the acknowledged heads of the profession. Still much good may be done; some of the objects held in view may be obtained; and artists may be brought to think and act together for the advantage of each and all.

Under existing circumstances, when unquestionably we are furnished with some reasons why we should hesitate to give an opinion, we cannot do fairer—as regards the Institute and ourselves—than publish the whole of the "ADDRESS OF THE COUNCIL," and the "Summary of the Laws of the Institute."

#### ADDRESS OF THE COUNCIL.

"The grand object of the Institute of the Fine Arts is to unite, by intellectual and social means, the interests of artists, and to attempt to establish a free and liberal intercourse between the patrons, the lovers of Art, and its professors.

"Considering the circumstances in which the interests of Art are involved, the causes become ap-

parent by which they are affected, and a course is clearly indicated by which the progress and welfare, both of Art and artists, may be strengthened, sustained, and protected.

"In contemplating the nature and attributes of Art, in looking back upon its history and the circumstances under which it has progressed and declined, in viewing the present state of society, and in considering the station and condition of the artist, together with the advantages it is necessary he should possess for the successful exercise of his Art, it is fully apparent that many obstacles oppose his progress, which no attempts have been made to remove, and which it is conceived would yield to certain means, backed by honest endeavour and united effort.

"It will be the object of this society to study to define, to adopt, and to recommend these means.

"We observe, in looking to cause and effect, that the successful in Art are those principally who are most favoured by circumstances; and although we are fully aware that these cannot confer genius upon aspirants, no evidence is wanting to prove that they are capable of checking its operation, of defeating its object, and of effecting its utter destruction.

"If we look at the progress of Art, we shall see that, whilst it continued to struggle alone and unaided, it did nothing; after a while it attracted attention, excited an interest, and, presently, those who until then had looked with coldness and indifference upon its condition began to warm in its favour, to listen, to learn, to study, to enjoy, and at last to feel an affectionate regard for its productions and its interests; and some even who had no relish for its beauties still found themselves capable of sympathizing with those they saw struggling in its cause, and thus an alliance was formed, which became the groundwork of its establishment, and the guarantee of its prosperity and success.

"It would be out of place to discuss the mode in which this alliance, this union of forces, has been found operating: but made up, as it is, of mutual sympathies, the interchange of intelligences, and a species of inter-tuition, it must, as a matter of course, have led to great and mutual advantages, and been productive of excellence in Art on the one hand, and of the establishment and refinement of taste on the other.

"It is greatly to undervalue patronage to regard it only as the source from whence the painter draws the means of existence. To know Art only through the medium of its productions, however important that knowledge may be, is still defective when compared with that acquirement which is only to be obtained by a free and liberal intercourse with its professors. Leonardo da Vinci, dying in the arms of Francis I., indicates something more than the cold relation of buyer and seller. If we refer to men who have stood forward in public observation and respect, who have been the benefactors of art and the arbiters of taste, we shall find them to have been such as did not disdain to become the allies of the artist,—to join in the spirit of his operations, to participate in his acquirements, to enter into his feelings and perceptions, to comprehend his motives, to learn his objects, and to know his means; to look with his perceptions, to feel with his sensations, and to think with his thoughts:—whoever first learnt to think and feel, in the mode of the painter, first exercised the faculty of taste.

"There is every reason to believe, that it is this alliance, in its various modifications and extent, the operation of which may be denominated the *mutual faculty*, which has lifted Art from its first lowly condition, sustained and carried it to its greatest elevation, and which will, whenever more powerful influences meet and unite in friendly co-operation, be the means of advancing it to the highest point of excellence it is ever destined to attain."

#### SUMMARY OF THE LAWS OF THE INSTITUTE OF THE FINE ARTS.

"That it shall be formed to facilitate a general intercourse of the members of the profession and the friends of Art; to effect which, suitable premises shall be taken as soon as the funds of the Institute shall permit.

"That the Institute shall be essentially an independent and deliberative body, and shall not originate or connect itself with any Exhibition or School of Instruction in Art.

"That the subscription shall be one guinea annually, payable in advance.

"That all artists, by profession, shall be eligible as members.

"That men eminent in station and acquirement, in literature, science, or art, wherever resident, shall be eligible as honorary members.

"That the council be empowered, in special cases, to elect honorary members, free from the usual subscription.

"That a committee, consisting of twelve members, shall be appointed annually, whose business it shall be to correspond with artists and literary and scientific men, and lay the result of their communications before the council, at the quarterly meetings. Members, honorary members, or free honorary members, shall be equally eligible to be elected upon this committee.

"It is proposed to hold six general meetings annually, at which papers illustrative of the objects of the society will be read, and to which members, honorary members, free honorary members, and correspondents, are invited to contribute.

"It is also the intention of the society to publish, at convenient times, a journal of its transactions."

## VARIETIES.

**VISITORS TO THE CARTOONS.**—Amount received and number of visitors during the fortnight, when a charge of one shilling admission for each person was made:—

Number of persons (12 days) ..	18,290
Ditto to private view .. ..	666
Number of catalogues sold ..	7,676
Money received (including for catalogues) .. ..	£1108 8s.

Of this sum, one thousand pounds has been expended, in ten awards of £100 each, to ten contributors of cartoons not entitled to prizes. The remainder of the receipts will be devoted to the payment of expenses—printing catalogues, &c. It is difficult to arrive at a correct estimate of the number of persons admitted on the “free days.”\*

**THE SECRETARY TO THE FINE ARTS COMMISSION.**—C. L. Eastlake, Esq., R.A.—has received from his Royal Highness Prince Albert a present of a diamond ring, of great value, in testimony of his high appreciation of Mr. Eastlake's services in forwarding the objects of the Commission. We rejoice to record an incident no less honourable to the illustrious originator of the commission than to the distinguished artist by whom it has been conducted to results which even already form a glory of the age and country. We understand that the autograph letter which accompanied the gift is such as to render that gift immeasurably more valuable in the estimation of the receiver. The public owe to Mr. Eastlake a debt which cannot be so soon discharged; it is one that may be paid by the satisfaction he will receive in having done more within a year to elevate his profession than any single individual has been able to achieve in half a century. To that profession he has rendered incalculable service—service tangible, solid, and substantial. We know that in Art and in Literature both, it has been said, and generally believed, that “benefits conferred” are too frequently taken by those who obtain them as “recompenses earned,” and that, consequently, for such benefits thanks are not only not required, but ought not to be paid. For our own parts we entertain no such opinion, and should heartily rejoice to see that artists and men of letters are not behind corn-law leaguers and cotton-printers, in their willingness to recognise a great and important benefit to individuals as well as to the mass.

**PUBLICATION OF THE CARTOONS.**—We perceive that Messrs. Longman have issued an announcement of their intention to publish engravings of the eleven prize cartoons, in outline, at a price of four guineas. The charge is far too high; a work of the kind at the cost of one guinea would certainly answer, but persons able and willing to give for it four times that sum are comparatively few, neither do we believe that the public are as yet sufficiently familiar with the apparently naked style of outline to be able to appreciate it. We hope, however, that our view may prove to be erroneous, and that the work will be largely successful. The enterprising publishers have acted towards the artists in a most liberal manner. We believe copies of the cartoons will be printed by one of the illustrated newspapers—a procedure which both the artists and Messrs. Longman should take steps to prevent.

**PAINTINGS FROM THE CARTOONS.**—Already instances have occurred to show the advantages that may arise out of the cartoon exhibition. Mr. Stephanoff has received a commission to paint a picture of the subject of his cartoon at the price of 200 guineas. We believe other cases of the kind have occurred.

**THE QUEEN'S SUMMER-HOUSE** in Buckingham-gardens is nearly completed, and the

frescoes produced by Maclise, Ross, Uwins, Stanfield, and Landseer, to whom her Majesty and the Prince intrusted the adornment of this enviable spot, are spoken of by the chosen few who have been fortunate enough to see them as being more than successful. The subject chosen was *Comus*,\* and the illustrations are, though of a small size, full of subject and interest. It is said that Landseer completed his between sunrise and sunset, Mr. Eastlake's is still untouched: he has been so occupied with the Commission that he has not had leisure, we have heard, to do more than sketch his subject. To point the moral of the tale is his privilege, and it is of all, the portion which he is best calculated to illustrate. Her Majesty and the Prince have taken the greatest possible interest in the progress of the adornment, visiting it themselves repeatedly, without state or ceremony. We hope the example they have shown in appropriating this branch of Art to such a purpose will be followed by those of our nobility whose princely fortunes enable them to joy in the pure and high Art which such men can present to them.

**PRINCE ALBERT** has received as a present twelve statuettes in metal, representing the emperors of the house of Bavaria, executed by Schwanthaler, of colossal size, in the throne-room at Munich. In order that such artists as might be anxious to compete for the execution of sculpture in the House of Lords should see in what way Schwanthaler had treated similar subjects, he sent them to Gwydir House for their inspection. It was kindly and considerately done. We have reason to rejoice indeed that the Prince feels so personally interested in the advancement and prosperity of British Art.

**FRESCO.**—We apprehend we have greatly exaggerated the difficulty of dealing with the (to us) new material, and believe that much less practice than we imagined will make us perfect in the *mécanique* of the art. A letter, signed “A Traveller,” has been addressed to the *Spectator*, from which we extract the following important passage:—

“‘Fresco’ has a grand sound in the ears of men ignorant of the practice of Art. They know the ‘Stanza of the Vatican’ were painted in fresco by Raffaele, and the ‘Capella Sistina’ by Michael Angelo; and because this mode of working has not been much practised in England, they think it confers critical consequence to assert that English artists cannot do it. Not so, however, says the most experienced fresco-painter of the age. I happened to be at Sir Robert Peel's when the Director Cornelius, on his last visit to England, was courted to give his opinion on the subject; and from long personal acquaintance I know Cornelius to be an honest man and no flatterer. He said, English artists seemed to him to be especially qualified to become excellent fresco-painters: the harmonious arrangement of colour, and the boldness of execution for which they are remarkable, would add a new charm to the Art in their hands. When deficient drawing was suggested as an impediment, he said, the necessity of preparing elaborate cartoons would compel a mode of study that had never yet been called for in England; and it was not just to presume the talent could not be found till the call were made. In the case of decorating the Houses of Parliament, he recommended the immediate arrangement of subjects, and setting about the designs, though the walls might not be ready to receive painting for some years.”

**THE COLLECTION OF R. VERNON, ESQ.** (50, Pall Mall).—This collection may be seen, any Monday or Thursday, between the hours of two and four, by tickets, which may be obtained of the President of the Royal Academy, Messrs. Jones, E. Landseer, Chalon, Eastlake, Etty, Leslie, and Stanfield; to ourselves, also, the valuable privilege has been extended of introducing persons who, we have reason to know, will appreciate the rarest treat the Arts can supply in this kingdom. If the reader will refer to the ART-UNION, No. 2, he will find some account of the collection. Since then, however, it has been

\* Mr. Macready's gorgeous *Maquette of Comus* had been laid aside at Drury Lane; but when he heard that her Majesty had issued her command for the purpose we have named, with his usual liberality, he invited the artists to the House, and repeated the *Maquette* for their particular enjoyment and advantage.

completely renovated. Every picture that approached inferiority, or, rather, which seemed not so good as the artist might produce, has been removed, and its place occupied by the best work of the master; every work (without one exception, save in cases of artists who were dead before Mr. Vernon began to form it) having been procured direct from the easel, and not by the intervention of a dealer. It is not enough to say, therefore, that the collection is first-rate; it is as perfect, at all events, as the combined efforts of British artists could make it. To attempt any description of the assembled works is at present out of the question: merely to name them would occupy several columns. We may do so, however, when we have greater command of space. It is enough to say that here will be found, at least, one example of every British artist of admitted genius—that example being, in nearly every instance, the best work his pencil has produced. Here a right notion may be formed of the capabilities of British Art; and to this glorious gallery every foreigner should be especially directed. We have sent several to examine it, and found them departing for the Continent with a very different estimate of our powers than that with which they would have departed if they had seen only our public exhibitions. The collection has, of course, cost an immense sum—a sum that would sound more like a nation's expenditure (abroad!) than the expenditure of a private gentleman out of a private fortune. All honour to so veritable a patron—so true a patriot! and this done—without the blast of a single trumpet—with as much unpretending modesty as genuine liberality. Be it remembered that there is not a single work in the gallery that has not been produced by a British artist, painter, or sculptor.

**BELL'S STATUE OF DOROTHEA.**—The marble statue of ‘Dorothea,’ the work of Mr. J. Bell, has been purchased by the Marquis of Lansdowne: another instance of the enlightened and judicious patronage of the most noble peer. We rejoice that this graceful and beautiful production of a most accomplished mind should have reached a destination worthy of it, for the collection at Bowood, although not extensive, is perhaps the most perfect in Great Britain.

**BRITISH MUSEUM.**—The number of visits paid by artists and students during the past year to the galleries of sculpture in the British Museum has been 5627, and the number of visitors to the print-room 8781. This, although an increase, is small, considering the immense advantages supplied by the various collections. Artists are not generally aware that the means of procuring access to these advantages are easy. Any young gentleman, whose respectability is known, making an application, and explaining his object, to either of the trustees—or obtaining, as he may easily do, a personal introduction to the proper officers—will be at once admitted.

**BRITISH INSTITUTION CATALOGUES.**—We are bound to utter some complaint concerning the price of the British Institution catalogue of the works of deceased masters. It contains just seven printed pages, in large type, with “meadows of margin,” for which the directors permit the sum of one shilling to be asked and taken—one penny being in reality above the true value, in proportion to the cost. We are sure that it is only necessary to draw attention to this fact to procure a just and necessary change.

**THE WELLINGTON AND NELSON MONUMENTS.**—A mass of gun metal remaining at the disposal of the committee of the City Wellington Statue, its appropriation has been sought by the committees respectively of the Nelson Column and the West-end Wellington Testimonial. By the latter it is urged that, for a monument to the Duke of Wellington, the material best suited is

\* Since Mr. Vernon announced his intention to open his gallery, it has been visited by his Royal Highness Prince Albert and suite, the Duke and Duchess of Sutherland, Lord Francis Egerton, and a large number of noble connoisseurs.

\* One of the attendants in Westminster Hall having counted the visitors for a certain time on one of the gratis days, reckoned that there could not have been less than 20,000 persons in the whole day.

assuredly the gun metal captured in his campaigns; on the other hand, it is claimed by the committee of the Nelson Column, on the score of poverty. A meeting has taken place at the Mansion-house for the determination of the claims; but the matter is yet undecided. In such disputes sculptors and artists cannot themselves interfere; although, generally, they suffer from the evil impressions which get abroad in consequence of such contentions. We cannot blame a committee man for the entertainment of a decent anxiety for the discharge of his trust, but assuredly all reckless and "thick and thin" exertion of patronage is most disgusting. This we conceive to be entirely an affair of the Government: there is surely old gun metal enough for both purposes; and it is to be lamented that for such purposes it should be withheld.

**VANDALISM IN MUNICH.**—It appears that "during the night of Sunday, the 2nd ult., the frescoes which decorated the arcades of the royal residence at Munich were so injured by some pointed instrument as to be now wholly undistinguishable." When, some years ago, the taste and liberality of the King of Bavaria commissioned and encouraged the execution of these works of Art—which, although of secondary excellence, were yet of importance, as tending to nourish and improve the educated sensibilities of the people—it was a debated question whether the public should be admitted, and if admitted, whether they should not be so under the surveillance of sentinels. The point was finally decided by the King in a memorable expression—"No sentinels: there shall be nothing between my people and their intellectual enjoyment of the BEAUTIFUL." Nor was there; neither were the King's hopes defeated: for months the people were admitted—and "See," said one of the artists who had decorated the walls, "there is not a speck upon the frescoes;" and years have since only added to the security of months. The present injury is supposed to be a personal act of spite, and is as much denounced as such an act can be; but it is yet to be determined whether, although the injury be national, the agent is one of the lower classes of the people.

**SANGIOVANNI.**—We visited the studio of Sangiovanni (23, Nassau-street, Middlesex Hospital), the other day, and were much pleased with his varied single figures and groups. He wishes it to be known that he gives lessons in his exquisite art to those who desire to study it either professionally or for their own amusement; and, as in his peculiar branch of art he is unrivalled, those who desire to cultivate what may be called *miniature modelling*, would do well to receive his instructions. We described some time ago the studio of this excellent artist, an Italian gentleman, who in his adversity lives by that which was the amusement of his prosperity.

**RAFFAELLE.**—We have seen at Messrs. Colnaghi's, Pall-Mall East, two drawings, which all reasonable evidence declares to be by Raffaele; the one is 'David slaying Goliath,' the other a 'Madonna and Child,' which the present proprietor hopes to be able to trace to the original possessors, the Ceccomani of Perugia. Both drawings have suffered neglect and ill treatment, and from their tattered condition must have been extremely difficult of restoration. The original picture for which this sketch is supposed to have been made is now in the possession of Samuel Rogers, Esq. Passavant, referring to that picture in his life of Raffaele, says, "it is undoubtedly by Raffaele, and came from the Orleans Gallery to Mr. Rogers' collection." The composition is extremely beautiful, and sufficiently Raffaelesque in character; the lower parts of the figures are indistinct, but the heads are perfect. The drawing is executed freely in chalk and charcoal, on paper prepared with distemper. The cartoon of 'David slaying Goliath' is small,

composed of many figures, and accords with the painting in the Vatican.

**HOGARTH.**—There is at Mr. Gwennap's, in Tichborne-street, a small collection of pictures by Hogarth, including particularly those painted by him for Vauxhall. Such was the condition of these pictures that they were sold at the late auction for four and five pounds each, and it was a matter of doubt whether they were worth the expense of cleaning. They were exposed to the free action of the atmosphere, and everywhere bore marks of the sandwich knife, which had been unhesitatingly thrust into them, under perhaps the inspiration of arrack punch; nor was this all—on occasions of the annual decorations they had received coats of varnish, until at length the painting left by Hogarth had entirely disappeared. One of the subjects is 'Night,' and, as usual, a satire: the scene is Charing-cross; the life—the passengers of the Salisbury coach, and other figures; and the season May, the 20th, celebrated in those days by illumination; a bonfire is blazing in the street, which has alarmed the horses, and upset the coach; and a gentleman, who has been spending the evening at "The Rummer," a then celebrated tavern, is returning home under the escort of one of the waiters, who carries a lantern and his sword, which he is himself unfit to be intrusted with. Another picture is 'Evening'; the scene is near Sadler's Wells; and the figures are a wealthy but hen-pecked tradesman and his wife, who are taking a stroll with their family near the "Sir Hugh Myddelton," a public-house still on the spot. In addition to these there are many other works by Hogarth, portraits and smaller pictures, of very great beauty. 'Night' is the property of Mr. Parkes, by whom it was purchased for £200.

**THE ART-UNION PRIZES.**—We have reason to believe—and but that the proof is not of such a nature as to be produced, we should say we *know*—that several disgraceful "bargains" have been made relative to prizes allotted by the Art-Union, persons having openly sold their right for from 20 to 40 per cent. less than the fixed sum—and sold them in some instances in public exhibition-rooms. This is a disgusting procedure, one which may do incalculable mischief to the profession, to the character of artists, to the Art-Union Society, and to the cause of Art. Of course the Art-Union Committee do all in their power to prevent the occurrence of so monstrous an evil; and we trust, whenever they have reasonable ground for suspicion, they make the inquiries they are bound to make—positively refusing to pay the money if any dishonourable traffic shall be detected; but public exposure will be the only safeguard, and this we shall certainly make in cases where proofs are conclusive. If any artist lent himself to this disgraceful mode of selling a picture, we hope that steps will be taken to prevent a prizholder from in future selecting another of his works. According to the principle of Art-Union, a pitiful cheese-scraper may obtain a prize, and may be shabby enough to hawk it about from one exhibition-room to another, openly proclaiming, "I don't want a picture, but I'll give my £80 prize for £60." This cannot be prevented; but if any artist were to take such a fellow at his word, give him the £60, and then go to the Art-Union (by deputy, that is to say), and buy his own picture for the sum of £80, thus making £20 by the transaction, we should know what term to apply to the bargain and the bargainer.

**ANCIENT FURNITURE.**—We have seen, at Messrs. Pratt's, in New Bond-street, some valuable specimens of Florentine mosaic, especially a cabinet, inlaid and otherwise ornamented in a manner extremely rich and curious. The designs are birds, groups of flowers, &c., disposed with much taste, as to colour and general arrangement. The completion of such a work must have occupied a series of years. Specimens of this mosaic are to be seen in the Palazzo Vecchio, at

Florence, which have been fourteen years in progress, from first to last. In the same collection are also many beautiful pieces of *marqueterie*, Louis Quatorze furniture, armour, &c. &c.

**TRACING PAPER.**—We have received a small portion of tracing paper, sent us by the manufacturer at 238, Strand. We have no hesitation in pronouncing it the best we have hitherto met with, as being perfectly transparent, and retaining, without any diminution of distinctness, the slightest or broadest ink line. The value of these qualities in tracing paper is sufficiently known to artists, especially those who travel, who frequently have only time enough to add to their memoranda a tracing, instead of a more finished sketch.

**CRETA LEVIS.**—We have inspected an invention of Messrs. Wolff and Son, of Church-street, Spitalfields. CRETA LEVIS are permanent coloured crayons of nearly every hue and tint, differing essentially from those in general use, inasmuch as they do not cast off, and are clearer than chalk, retaining at the same time much softness and delicacy. We think they would be found useful to the sketcher, as they are portable, not easily injured, and can be used upon white or tinted paper. We can recommend them especially to ladies, as we have seldom seen more charming specimens of flower-drawing than those produced by the CRETA LEVIS: the blue, generally so coarse in chalk, was singularly clear, and many of the landscapes and heads submitted for our inspection proved that Mr. Wolff has made a valuable discovery.

#### LIST OF PICTURES, &c., SELECTED BY PRIZE-HOLDERS IN THE ART-UNION OF LONDON, SINCE JULY 1, 1848.

[The Title of Picture, Artist's Name, and Price.]

##### From the Royal Academy.

J. Kent, 80*l.*; Torre del l'Annunziata, G. E. Hering, 80*l.*  
T. Lyons, 50*l.*; Interior of the Cathedral, Pisa, S. A. Hart, R.A., 30*l.*  
J. Hudson, 25*l.*; Crossing the Brook, T. Mogford, 25*l.*

##### From the British Institution.

—Wilkins, 50*l.*; The Old Oak Tree, G. E. Hering, 60*l.*  
W. T. Egerton, 40*l.*; The Highland Fead, R. R. M'lan, 40*l.*  
J. Dowling, 30*l.*; Sunset, Mrs. J. B. Pratt, 31*l.* 10*s.*  
J. Price, 20*l.*; The Farewell, T. Clater, 20*l.*  
G. Russell, 15*l.*; Barnard Castle, Durham, W. Fowler, 15*l.*  
W. Brookes, 10*l.*; Sunday Morning, C. Martin, 10*l.*

##### From the Society of British Artists.

D. Willis, 40*l.*; Broadbridge Vale, Devon, J. W. Allen, 40*l.*  
Z. A. Jessel, 25*l.*; Rouen Cathedral, E. Hassell, 35*l.*  
E. Parritt, 25*l.*; Reminiscences of Bygone Days, H. J. Pidding, 35*l.*  
G. Waldron, 25*l.*; Painsantry of the Kingdom of Naples, A. W. Elmore, 40*l.*  
F. G. White, 25*l.*; Interior—North Wales, C. Baxter, 25*l.*  
H. Wood, 25*l.*; A Comical Question, H. J. Pidding, 30*l.*  
Hobart Town, 20*l.*; The Cotter's Saturday Night,\* J. Stewart, 20*l.*  
T. M. Weddall, 10*l.*; On the Coast of Dieppe, H. Lancaster, 15*l.*

##### From the New Society of Painters in Water Colours.

W. Rothery, 25*l.*; Water-mill at Ambleside, T. M. Richardson, 25*l.*  
B. D. Colvin, 15*l.*; The Orphans, F. W. Topham, 15*l.*  
J. E. Cook, 15*l.*; The Pet of the Camp, A. H. Taylor, 42*l.*  
G. Magnay, 15*l.*; Rustic Bridge, near Ilkley, F. W. Topham, 15*l.*  
C. J. Moore, 15*l.*; Boulogne Shrimpers, J. J. Jenkins, 15*l.*  
C. Moxley, 15*l.*; Fresh Breeze, off Erith, E. Duncan, 15*l.* 15*s.*  
W. Broadbent, 10*l.*; Scene from "Tristram Shandy," J. Absolon, 10*l.*

##### ERRORS IN THE LIST PUBLISHED LAST MONTH.

Rev. J. Stratton, 10*l.*—For 'The Poet,' by W. Hunt, 8*l.* 8*s.*, read 'A Cottage Interior,' by W. Hunt, 15*l.* 15*s.*  
Miss Heath, 50*l.*—For 'Meccenas's Villa,' by W. Havell, 52*l.* 10*s.*, read 'Bern Castle, on the Moselle,' by C. Deane, 42*l.*

\* This work was originally priced at a much larger sum; but in consideration of its selection as the picture to be sent to Hobart Town, the artist has consented to accept for it the amount of the prize.

## REVIEWS.

ARTS, ANTIQUITIES, AND CHRONOLOGY OF ANCIENT EGYPT. By GEORGE H. WATHEN, Architect. 8vo., with 12 Plates, and Woodcuts. London: LONGMANS, 1843.

Very possibly the long dissertation on the chronology of Ancient Egypt, and other matters therewith connected, may chiefly recommend this volume to many; or it would, perhaps, be far nearer the mark to say, to the few whose studies have qualified them to appreciate and take interest in it. Yet all we shall say of it is, that it looks awfully learned and profound, and shall therefore confine ourselves to those portions of his book where we can follow Mr. Wathen as an architect and antiquary; nor shall we do so without pleasure, as far as he speaks from his own observations and impressions, though we could wish that he had not been quite so desultory in manner, and had also entered more at length into those matters which he has touched upon with most *con amore*.

Until about the beginning of the present century, the study of Egyptian architecture was hardly even so much as dreamed of by professional men. It was known that there were pyramids, obelisks, and sphynxes—the first of which might be applied to an area of six feet square on a grass-plot; the second serve as models for pumps and lamp-posts; and the third do well enough to stick up on the piers of gates,—after a fashion too that might have puzzled a second *Œdipus*. As to Egyptian architecture in general and its columnar style, nothing was understood even by those who had some occasion to make themselves acquainted with it. The “learned Poussin” himself has committed, if not scandalous, rather ludicrous errors of costume, making Pharaoh the tenant, not of an Egyptian apartment, but an Italian *sala* in the Palladian style. In fact, Egyptian columns were, as far as known, if at all, to the “Five Order School,” only so many Egyptian monsters—things without either shape or proportion, and which, as they were unfit for copying, were not worth studying; and to confess the truth, Egypt is rather the land for antiquarian than architectural travellers, for the last must pay for their curiosity by the despair they bring away with them of ever feeling again in the same degree the intensely sublime in architecture. Can we petty mortals attempt even to ape, much less to imitate, the stupendous structures, in comparison with which Windsor is a mere mushroom thing of lath and plaster, and the Thames Tunnel merely a “little bit of a bore”?

It is true, Dr. Macculloch once endeavoured to convince us, by a very ingenious paper in the “Westminster Review,” that the Egyptian style was perfectly well adapted for many purposes at the present day; and we heard not very long ago, that a building was about to be erected at Leeds or in its neighbourhood, which was to be a specimen of veritable Egyptian, even to the extent of showing the effect of its mural sculpture and polychromatic decoration, for which an architect had been applied to who had been in that country and studied its monuments; but we have not since been able to ascertain anything further respecting it. There is, indeed, one circumstance which seems altogether against the adoption of such a style in this country, which is, that it is expressly adapted to one where rain never falls; while here it does sometimes rain, not, perhaps, many times in a year, and for good reason, since it falls for a month or six weeks together;—but this is mere wayward idling, and we deserve to be called to order for it.

In itself, however, it is not altogether idle to consider how far not only the mere forms can be applied, but the character of the style itself be, we will not say fully, but sufficiently well kept up. Now one thing that almost interdicts its application among us, except in a few peculiar cases, is, that it does not admit of windows, at least only occasionally, and as mere loopholes or very narrow apertures. Both climate and religion favoured such a mode of building, the one requiring the exclusion of sun, and the other demanding gloom, and refusing more light than merely darkness visible. Nevertheless, open-armed, if not equally open-handed, America, which gives a ready welcome to all comers, has welcomed Egyptian architecture; and, if we may trust to the re-

port which has been made by one who was educated to the profession, “the Hall of Justice, in Franklin-street, New York, is a model of an Egyptian temple on such a grand scale, as to be in degree only inferior in effect to its magnificent prototypes at Dendyra and Thebes;” but we read with doubt, because he goes on to speak of very lofty windows, in design probably not unlike those in our own Piccadilly Egyptian.

Let us now turn to Mr. Wathen’s account of some less equivocal specimen:—

“Next to the pyramids, the most wonderful relic of Egyptian art is undoubtedly the great hall of the temple-palace of Karnak. From the inscriptions we learn that it was founded by Menephtah-Osiri I., father of the great Ramesses, who was on the throne about the middle of the fifteenth century B.C. Its superficial area—341 feet by 161—is sufficiently spacious for a quadrangle. Majestic in ruin, what must it have been when perfect! The massive stone roof is supported by a phalanx of 131 giant columns, arranged in sixteen rows. Most of these are 9 feet in diameter, and nearly 43 feet high; but those of the central avenue are not less than 11 feet 6 inches in diameter, and 72 feet high; and the diameter of their capitals at their widest spread is 22 feet. The walls, columns, architraves, ceilings—every surface exposed to the eye is overspread with intaglio sculptures—gods, heroes, and hieroglyphics painted in once vivid colours. It is easy to detail the dimensions of this building, but no description can convey an idea of its sublime effect. What massive grandeur in its vistas of enormous columns! What scenic effects in the gradations of the chiaro-scuro, and the gleamings of accidental lights athwart the aisles! As you move on new combinations unfold themselves every moment. Wherever the idea wanders it is filled with picture—rank behind rank, vista beyond vista.”

“All the resources of Egyptian architecture are here displayed in perfection: its enormous masses, its long, close files of columns, its deep seclusions, and its rich pervading sculptural decoration. Burke could not have wished for a happier illustration of that part of his theory which refers the sublime in architecture to succession and massiveness.”

This is well remarked, and no less happily expressed, with a good deal of poetical glow, and perhaps some play of imagination also, for Mr. Wathen seems to restore the edifice to its pristine condition, whereas his view of it shows it to be roofless; hardly, therefore, could he have witnessed in its present condition those peculiar effects which he attributes to it. Still his remarks are written in a true artistical spirit, and show him to possess a keen appreciation of qualities and circumstances that are usually not so carefully attended to and noted by those of his profession as they deserve to be. Well worth quoting, too, is what he says on the subject of *polychromy*, or coloured architecture, when speaking of another temple-palace, viz., that at Medinet Habou (Medinet Abou):—

“The quadrangle now presents one of the best examples of the beauty of the Egyptian system of intaglio decoration. Bas-relief laid over a whole building would be insufferable, but these intaglios spread an equable tone of enrichment without breaking the outline, overloading the surface, or impairing the general repose.”

“All the mural sculptures and hieroglyphics are painted in vivid colours, chiefly reds and blues; the ceilings a deep azure, studded with stars. Skillfully distributed and balanced, all combine into one harmonious effect, striking and gorgeous, yet wholly free from meretricious glitter. I think the staunchest enemy to the introduction of colour in architecture would return from a visit to the palace of Ramesses III. a complete convert to polychromy.”

“The use of rich colours in architectural embellishment has, in truth, all the sanction that the highest authority, the practice of all ages, and the analogies of nature can give it. Colour was commonly employed by the nations among whom the arts arose and received their earliest culture. It was adopted by the Greeks, gifted as they were with an intuition of the beautiful probably never equalled; it was in repute at Rome in the Augustan period; it maintained itself during the middle ages, and was employed, internally at least, by the great revivers of the arts in Italy.”

Still, powerful as the effect of Egyptian polychromy may be, it admits of question how far the impression made by it arises from the intrinsic merit of such decoration, and how far from accidental circumstances. In such cases the emotions excited in the spectator are likely to be of a very mixed kind; and both wonder and the satisfaction of actually beholding such extraordinary monuments of primal Art may have a very great share in forming a judgment of their æsthetic effect. Although tolerably free from prejudices on the subject, we must confess that we greatly suspect the taste displayed in the Egyptian system of polychromy and mural intaglio sculpture. “Vivid colours,” prevailing throughout, do not seem the

most suitable for the purpose, but, on the contrary, likely to render the uncouthness of design in the figures all the more glaring. Possibly, however, this very uncouthness may contribute in some degree to the general satisfaction felt at viewing the monuments themselves, as being strikingly characteristic of a style so remote from those we are at all accustomed to.

As to the Greek system of polychromy, that appears to have been very different from the Egyptian, though hardly less at variance with our ideas of architectural simplicity and correct taste. What is known respecting it, however, is little more than conjectural, merely sufficient to assure us that it was actually practised, or hardly that, for there are many who still refuse to believe that the instances brought forward as proofs really amount to such; and it must be admitted that there is one circumstance which favours scepticism, it being at least singular that all traces of colour should have nearly disappeared from Grecian buildings, which are comparatively works of quite modern date, while, as we are assured, in many Egyptian ones the colours remain nearly, if not quite, as perfect as at first.

The revival of external polychromy is, in this country, almost out of the question, on account of our climate and atmosphere; but our architects have also been shy of endeavouring to ascertain its effect. In order to do that, something more is requisite than a few fragmentary specimens of Doric and Ionic entablatures, &c., coloured after ancient authorities, as are those in Mauch’s “Griechische Bau-ordnungen,” and the “Transactions of the Institute of British Architects.” Such representations amount to no more than bits of pattern, from which it is scarcely possible to judge of the actual and total effect: for which purpose the specimens require to be shown in relief; that is, not as details drawn and coloured upon paper, but in solid models of entire buildings so restored, and those upon a larger scale than usual. If it be not worth while to make an experiment of the kind in a building erected expressly as a model—like Klenze’s Ionic temple at Munich—it surely would be so to have some models of the kind here recommended. We might, too, have something which, though upon miniature scale, would serve to convey a tolerable idea of the character and decoration of Egyptian architecture. For instance, one of the rooms of Egyptian antiquities in the British Museum might be so fitted up.

We have now wandered far from Mr. Wathen and his book—at any rate so many will think—nor have we left ourselves room to add much to what we have said concerning them, and must therefore pass over some other matters which we had intended to notice. One thing which we regret that Mr. Wathen has not given us, more especially as we think he would have done it well and interestingly, is a systematic and synoptical view of Egyptian architecture and its several styles, elucidated by more numerous specimens of columns and other details; because at present information of that kind can be gathered only piecemeal from the descriptions of the monuments he notices. Additional examples of columns we certainly desiderate, and also the author’s opinions as to the relative merits of the different classes of them, which, though all partaking of one universal character, vary considerably when compared with each other. That he will yet do so in some other publication is more than we dare look for, because the profession are not likely to call for any such work.

Practical men are, we are sorry to say, seldom more than practical men: for such sort of trash as mere pattern books of “original designs” for modern churches and chapels, villas, parsonage houses, &c. &c., there appears to be a wonderful demand among the *Pecksniffs* of the day, who lay their account to stealing ideas from things that have not a single idea worth borrowing; but as for their studying Egyptian architecture, or, indeed, any architecture, for the mere sake of studying it, that is quite out of the question. Stonehenge and Karnak must be to them pretty much in exactly the same style.

TWELVE VIEWS IN CORSICA. Drawn, etched and published, by W. COWEN.

Napoleon is of course not forgotten here. We have consequently in the first view the room in which he was born: it is a plain apartment, *parqueté* with simple octagonal pieces of oak or

walnut-tree, large, and very sparsely furnished. Nothing can exceed the simplicity of the exterior of the house, the front of which is a plane, unbroken by any projecting ornament, and pierced with windows of the most ordinary kind. Then comes the Gulf and City of Ajaccio, of which the artist has chosen a most favourable point of view. Corsica is not in the beaten path of our painters: it boasts no cities that have nurtured the infancy of art; but in landscape scenery, especially of a wild character, it yields to no country in Europe. After Ajaccio we have Bastia, which, viewed from the sea, is one of the most beautiful and picturesque ports, on a small scale, on the shores of the Mediterranean—and who that has visited it, and sojourned there, will ever forget its wild myrtles—its lemon and orange groves; and, above all, its quails, tunny-fish, and anchovies, *alla Ghirlandajo*—to say nothing of a sun that shines there seven days in the week? Bastia as here represented is very like the place: the port is formed by a little bay, with the assistance of a pier on the side most exposed to the sea; the houses rise from the water's edge, and the heights on the left are crowned by the citadel.

These views are on quarto paper, and although called etchings are finished in a manner nearly approaching engraving. The work possesses very high interest, and is a contribution of rare value to the history of the age,

#### A LETTER ON THE APPROPRIATE DISPOSAL OF MONUMENTAL SCULPTURE. By RICHARD WESTMACOTT, F.R.S., A.R.A.

This letter is addressed to the Rev. H. H. Milman, M.A., Prebendary of Westminster, &c., and points attention to the arrangement and character of the monuments in Westminster Abbey—the want of order among which is a matter of complaint to every person of taste and discernment by whom they are visited. Some changes are now, however, contemplated with respect to the sites of these monuments; and space for others hereafter to be erected is to be considered. The author of this *brochure* puts forth his views at this time, as there is a disposition to promote Art beyond what has ever before existed in this country—and, especially, seeing the increasing attention paid to ecclesiastical architecture and decoration; and so heartily do we concur in what he has expressed, as to regret that he has not treated the subject at greater length.

There are churches in which have been erected sepulchral monuments of a more magnificent description than any in Westminster Abbey; but there are none containing an assemblage of monuments erected to the memory of so many persons of exalted genius and sterling worth.

Any attempt at a critical consideration of the later monuments would be idle here, but this, it is to be hoped, will be cared for—that for the future only works fitted in their design for sepulchral monuments shall be permitted to be erected. We are fully aware of all the difficulties attending the realisation of such a *desideratum*, but, great even as they are, they are by no means insurmountable. There are, it is remarked, two classes of monumental design—"one of a personal and commemorative character, and having reference to worldly honour and achievements, and therefore illustrating the importance of the individual; the other intended to be simple records of the dead: they remind us, not of the glory and honours of a transitory life, and of this world, but of that change to which all are doomed." And the author points out the error of associating these two classes of monumental sculpture. How appropriate soever are the earlier monuments of kings and warriors, it would not be desirable, in the present state of Art, to return to this style, although the early simplicity is unquestionably preferable to the absurd and extravagant mythological compositions of modern times; but, as there is a style of elegiac poetry, there is also a style of monumental Art fitted at once to commemorate departed greatness and exercise our improved taste in sculpture.

Mr. Westmacott thus briefly states his views:—

"It does not become me to presume to lay down any rules for the treatment of monumental sculpture; but I am desirous to answer some objections that have been offered to returning to the more simple style of design. It has been said that if this should become general all monuments would be alike; that they would be tame copies of each other; that there would be no room for

the display of skill, or the exercise of imagination; and finally, that monumental art would be so mechanical that it would cease to have any effect on the spectator. But it must not be supposed that, in carrying out the principle of simplicity and singleness of feeling in monuments of this class, sculptors would necessarily be limited to one type. It is not necessary to recur to the monuments of the thirteenth and fourteenth century, as the models that are to be implicitly followed. It is quite natural that, when sculpture was first used in monuments and art in its infancy, the most simple forms should have been adopted; and these were shown in the effigy of the person commemorated lying on his tomb. This, therefore, was the type generally employed, and it continued to be used, prescriptively as it were, for a long period. But the unequalled adoption of these primitive forms need not be insisted on as the only means to give modern sculpture an equally expressive character. An artist, without losing sight of the principle, may still introduce a sufficient variety of action to save himself from the suspicion of poverty of ideas, and his works from the charge of a dull monotonous uniformity. Statues of all classes—of the king, the judge, the philosopher, the soldier, or the senator—of simple design, and in attitudes of meditation, offer ample opportunity for the display of all the higher attributes of art, whether of expression or form; and when to these are added appropriate illustrations in rilievo or in figures, it is going too far to say that church sculpture, so to call it, does not give the artist room to exercise his imagination, and to show his skill. It might be interesting to trace the origin and growth of the mixed or pseudo-classical taste, and to attempt to account for the abandonment of the devotional or religious feeling which characterises all the earlier specimens of monumental design; but the inquiry does not necessarily bear upon the purpose I have particularly in view, and its consideration would carry me far beyond the limits to which I desire to confine myself in this letter.

"The most obvious mode of effecting these objects would be to establish distinct receptacles for monuments so distinct in character as those last referred to, and what may be termed sepulchral monuments: to appropriate some public building, or apartments in such building, exclusively for heroic commemoration, and to let it be generally understood that no works but such as have a distinctive ecclesiastical character in their mode of treatment are to be placed in edifices used for religious purposes. It is clear that any general rule established on this principle can only be made to apply to the future; but it may not be altogether beyond our means to effect some beneficial changes in the disposition of existing works, and it is to this subject that I would now earnestly invite your attention. Taking the projected changes as the groundwork for a more extended operation, I should propose to carry the partially new arrangement of the monuments much further than at present may be intended, and suggest that an entirely new *locale* may be used for those statues which are either placed where they cannot be seen, or inconveniently, or improperly, occupy situations in the body of the Abbey, or in its chapels. The fact of these works having already been received into a sacred edifice might seem to form an objection to their being removed; and it may be urged that, whatever regulations may be made with regard to admitting works in future, respect should be shown to these 'older tenants of the soil.'"

"I would observe, too, that the question is not one of destruction nor rejection, but simply of change of situation. It must be remembered that very few of the monuments in the Abbey are immediately over, or, indeed, very near, the remains of those in whose memory they have been erected: nay, it is perfectly well known that the subjects of many of them—as Shakespeare for instance—are not even interred in the church. Making, then, every allowance for these objections, and admitting that they rest on grounds deserving respect and consideration, I still venture to think they are not insuperable. The change of situation within the Abbey is, as I have observed, already contemplated. An occasion fortunately presents itself, if it can be taken advantage of, for carrying out a very important part of the plan I venture to recommend, while at the same time the utmost regard may be paid to the works which it may be thought expedient to select for removal. Admitting that the entire rejection of any monument already received into the Abbey might give offence, a simple change of situation to a building connected with, and contiguous to, the church could not be considered to involve any disrespect to the works placed there. The opportunity of effecting this is now offered to the Dean and Chapter, if they should be pleased to avail themselves of it, by the removal of the public records from the Chapter House, in which hitherto they have been deposited, to a building exclusively intended for the reception of such documents."

It is to be hoped that, since attention to the arrangement and fitting character of the monuments in Westminster Abbey has been called forth in the proper quarter, that something will be proposed and effected in the way of a better disposition of these monuments. It is highly gratifying to see that much has been done by some of our most eminent sculptors to chasten the taste in this department of Art; but these efforts will be frus-

trated, unless they have the aid of those authorities whose co-operation must be of much value to them, and with whom rests the adoption of some such plan as is here proposed, which must elevate the character of monumental sculpture.

**THE NAUGHTY BOY.** Painted by EDWIN LANDSEER. Engraved by W. FINDEN. Published by GRAVES and WARMSLEY.

A naughty boy was never so admirably described as in this little print, which may be placed side by side with Landseer's 'Little Red Riding Hood.' It is a child put in a corner for misconduct, and the expression of the countenance—sullen, obstinate and angry—describes a wayward boy better than it has ever been done before. This little print is beautifully engraved in line.

**VENICE; Interiors and Exteriors.** By LAKE PRICE.

This very beautiful and valuable work was received too late to do it justice in this number. It shall be fully reviewed in our next.

**HOURS IN LORD NORTHWICH'S PICTURE-GALLERY.** CHELTENHAM, IN ITS PAST AND PRESENT STATE. Publisher, DAVIES, Cheltenham.

These works—largely and admirably illustrated—do the highest credit to a provincial press. The publisher is, it appears, the author. He has compiled his volumes with much judgment and good taste, and issued them in a very elegant form. The famous gallery of Lord Northwich is near one of the most beautiful of English towns, where, perhaps, more than any where else in England, may be enjoyed the blessings of "health and peace," provided always there be "competence."

**FELIX SUMMERLY'S HAND-BOOK FOR THE NATIONAL GALLERY.** BELL, publisher, 186, Fleet-street.

This is an admirable "got up" little volume, unquestionably the best catalogue of the "National Gallery," and that by very many degrees. It has been compiled with industry and care; the remarks appended to each picture are sensible, judicious, and sufficiently explanatory of its history; and several of the paintings are accompanied by woodcut illustrations—"reminiscences"—which give a clear idea of the character of the original. The little book is prefaced by a "Sketch of the Rise and Progress of the Gallery," containing a great deal of useful information; and there is a chapter introductory, called an Advertisement, which relates an odd story concerning Mr. Joseph Hume, M.P., and the "Society for obtaining Free Admission to Public Monuments." These private disagreements had always better be kept out of sight; but having read the statement of Mr. Cole (Felix Summerly), we are bound to say he has been ill-used by the member of parliament, who, if not himself a plagiarist, has been guilty of aiding and abetting plagiarists.

#### TO CORRESPONDENTS.

The absence of the Editor from London during the whole of last month produced some confusion, and caused some few errors in the last number of the ART-UNION, for which apology is necessary.

Mr. Spence, of Liverpool, has kindly corrected one or two errors in our notice of Gibson. He was born, not at Betters, but at Conway, and was christened in Conway Church. He has not, it appears, been in England since he left it twenty-four years ago.

Of course, if we had received any answer to Mr. Haydon's letter concerning the "School of Design," we should have published it.

Among the many letters we have received on the subject of the "cartoon competition," we do not find one that we think it desirable to publish.

**STUDIES OF ARMOUR.**—The collection of armour at the Tower is open to artists upon obtaining a note, we believe, from the President of the Royal Academy.

The complaint that drawings made on cloth have been received is unreasonable. *Cartoon* everybody knows is paper, but this is a distinction too trifling to have weight.

## WAVERLEY NOVELS.

## I. ABBOTSFORD EDITION.

VOLUME THE THIRD is just completed, price £1 8s., containing  
**ROB ROY and THE HEART OF MID-LOTHIAN,**  
 With Eleven Steel, and One Hundred and Thirty Wood Engravings.

Also complete,

VOLUME THE SECOND, price £1 8s., containing  
**THE ANTIQUARY, BLACK DWARF, and OLD MORTALITY,**  
 With Eleven Steel, and nearly Two Hundred Wood Engravings.

AND VOLUME THE FIRST, price £1 8s., containing  
**WAVERLEY and GUY MANNERING,**  
 With Ten Steel, and Two Hundred Wood Engravings.

\*. WAVERLEY, GUY MANNERING, THE ANTIQUARY, BLACK DWARF, and OLD MORTALITY, ROB ROY, and THE HEART OF MID-LOTHIAN, are done up as separate Novels, in green cloth gilt, forming Six handsome Volumes, price 15s. each.

## II. WAVERLEY NOVELS, PEOPLE'S EDITION.

82 Numbers and 20 Parts of this issue are published.

THE BRIDE OF LAMMERMOOR is now complete, price 1s. 4d.

## III. THE LIFE OF NAPOLEON.

By SIR WALTER SCOTT.

VOLUME THE FOURTH, is also ready, with Plates and Maps.

ROBERT CADELL, EDINBURGH; HOULSTON and STONEMAN, LONDON.

**HAMPTON COURT.—BOARD and LODG-**  
 ING for Single Gentlemen, at the King's Arms  
 Hotel, Hampton Court, adjoining the Royal Gardens,  
 at TWO GUINEAS per week, including attendance of  
 every description.

Permission is given to copy in the Palace, on applica-  
 tion to Lord Lincoln, Chief Commissioner of Woods  
 and Forests, Whitehall-place.

**TO ARTISTS.—W. WARRINER,** Manu-  
 facturer of MINIATURE FRAMES, MATS, MO-  
 ROCCO CASES, and GLASSES of every description,  
 returns his most sincere thanks to those Artists who  
 have so long patronised him; and begs to state, that,  
 manufacturing the whole on the Premises, he is enabled  
 to furnish them at lower prices than any other house in  
 London, and with the greatest punctuality.  
 No. 16, CHARLOTTE-STREET, FITZROY-SQUARE.

**FRAMES FOR ART-UNION PRINTS,**  
 &c.—C. F. BIELEFELD begs to call the atten-  
 tion of Artists, Printers, &c., to his numerous  
 assortment of PICTURE-FRAMES appropriate for the  
 Art-Union and other Prints; manufactured in his im-  
 proved Papier Maché.

"The specimens of these frames, which we have seen,  
 are certainly very beautiful."—Globe, Jan. 17, 1843.

"They look exceedingly attractive, and in reality  
 as much so as if they had passed through the hands of  
 the carver, and been produced at about ten times the  
 expense. They have a clearness and sharpness that we  
 have seldom or never seen obtained in composition."—  
 ART-UNION.

C. F. B. has just published a new Tariff of his Papier  
 Maché Frames, illustrated with Sketches of the various  
 Patterns, &c., which will be immediately forwarded to  
 order on the receipt of six Post-office stamps.

Works—15, Wellington-street North, Strand.

REGISTERED 1843.

**TO ARTISTS and AMATEURS.—The**  
**CARTOON PENCILS,** for the rapid production  
 of Drawings and Designs in the style of the Old Mas-  
 ters.—The attention of the Profession, and all engaged  
 in the delightful Art of Drawing, is particularly directed  
 to the above Lead Pencils, which have been manufac-  
 tured for the production of Designs, &c., in that bold  
 and effective style so much desired by the present taste.  
 For the execution of both large and minute work, they  
 will be found to stand unrivalled. Their quality and  
 peculiar form adapting them for the deepest and most  
 delicate tints, while the absence of the numerous de-  
 grees (these pencils being only of four distinct shades)  
 gives the essentials positively required, doing away  
 with superfluity and confusion. Their peculiar feature  
 is, they REQUIRE NO POINTING, but by cutting away  
 the cedar, the means of producing Line and Shade of  
 various breadths is immediately presented. The Lead  
 of which these Pencils are manufactured is pure and  
 genuine, and by extreme care and attention, every  
 gritty particle is removed, which allows them to be  
 used with that freedom and sweetness so essential for  
 the production of fine drawings. In conclusion, they  
 will be found a desideratum long required, and must,  
 upon trial, obtain a decided preference and extensive  
 patronage.

Manufactured and Sold by REEVES and SONS,  
 at their Superfine Permanent Water Colour, and Black  
 Lead Pencil Manufactory, 150, CHEAPSIDE, London.  
 DEGREES:—No. 1, Hard; 2, Hard and Black; 3,  
 Soft; 4, Soft and Black.

JUST OPENED,

**PANORAMA, Leicester-square.—A beautiful**  
 VIEW from the RHINE of COBLENTZ and  
 EHRENBREITSTEIN, the Gibraltar of the Rhine;  
 Forts Alexander and Constantine, the Bridge of Boats,  
 the Moselle and its ancient Bridge, Fort Francis, and  
 all the surrounding objects of celebrity in this most  
 splendid, romantic, and historically interesting portion  
 of Europe. The Views of Edinburgh, as at the time of  
 her Majesty's visit, and Baden Baden, still continue  
 open.

**AN ARTIST has a VACANCY for TWO**  
**PUPILS.** For particulars, address to J. F. HEN-  
 RING, No. 4, Charles-place, Albany-road, Kent-road.

**SCHOOL OF ART, No. 6, CHARLOTTE-**  
**STREET, BLOOMSBURY.**—This School, estab-  
 lished and carried on many years by Mr. SASS for  
 the EDUCATION of ARTISTS, and the Instruc-  
 tion of Amateurs in Figure and Landscape Drawing  
 and Painting in Oil and Water-colours, Modelling,  
 Etching, &c., possessing every requisite as a Proba-  
 tionary School for the Royal Academy, is now con-  
 ducted on the same principles as heretofore by Mr. F. S.  
 CARY, with the aid of Mr. REDGRAVE, A.R.A., who  
 is engaged as Visitor.

The Studios contain an extensive collection of Casts  
 from the Antique, Drawings, Works of Art, and Folios  
 of Prints from the Old Masters.

\*. There is a separate Establishment for Ladies.

Mr. F. S. CARY may be spoken with from nine till  
 eleven, at the School, where printed particulars of the  
 terms are to be had.

**PICTURE-FRAMES, CHIMNEY GLASSES,**  
**CONSOLE TABLES,** and every department of  
**CARVING and GILDING,** of superior quality, sup-  
 plied cheaper than by any other manufacturer in the  
 kingdom, by P. GARBANATI, WORKING CARVER  
 and GILDER, 19, ST. MARTIN'S-COURT, St. Mar-  
 tin's-lane. An extensive assortment of Gilt and Fancy  
 Wood Picture Frames, Chimney Glasses, &c., kept  
 ready; handsome ornamented Gilt Window Cornices,  
 4s. per foot; Gilt Room Moulding, 6d. per yard. Every  
 description of Work regit, cleaned, and repaired in a  
 superior manner at the lowest possible prices. Ladies  
 and Gentlemen waited on with Drawings, and Estimates  
 given, free of charge. A list of the prices of Plate Glass,  
 &c., sent (prepaid) to any part of the kingdom. All  
 Goods purchased at this manufactory carefully packed,  
 and the loan of cases, free of charge. Every article  
 manufactured on the premises.

**POOLOO'S CHINESE CEMENT.**—The  
 extraordinary properties of this Composition  
 make it one of the most useful articles ever presented  
 to the public. It is perfectly impervious to hot or cold  
 water, and will resist the effects of the most intense  
 heat. So tenacious and firm is it in its hold that a new  
 fracture is certain to take place rather than a severance  
 in the original. Thus it surpasses all other Cements for  
 mending China, Glass, Ivory, the setting of Stones and  
 Beads in Rings and Trinkets, &c.—Sold, wholesale and  
 retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d.,  
 by the Proprietor's sole agents, BLOFIELD and Co.,  
 Cutlers and Razormakers, 6, Middle-row, Holborn; and  
 by their appointment, at the principal Chemists and  
 Perfumers. BLOFIELD'S London made Table Knives,  
 at BLOFIELD and Co.'s, 6, Middle-row, Holborn.

**EXHIBITION of SIR GEORGE HAY-**  
**TER'S GREAT PICTURE of the HOUSE of**  
**COMMONS,** painted on 170 square feet of canvas, and  
 containing Portraits of all the Members of Parliament,  
 also a portrait of her Majesty Queen Victoria, and  
 various other works, being the largest collection of  
 Portraits that has ever been submitted to the view of a  
 London public in any exhibition. In consequence of  
 the immense concourse of visitors, this attractive Exhi-  
 bition will remain open a few weeks longer, before its  
 removal to the Provinces. Open from 10 till dusk. At  
 the Egyptian-hall, Piccadilly. Admission 1s.

**TO ARTISTS.—ART-UNION of LONDON.**

—SIXTY POUNDS will be given for the best  
 consecutive Series of not less than TEN DESIGNS  
 in OUTLINE (size 12 inches by 8). The subject is left  
 at the option of the Artist, but must be illustrative of  
 some epoch in Sacred or British History, or be taken  
 from the work of an English author. Simplicity of  
 composition and expression, severe beauty of form, and  
 pure, correct drawing, are the qualities which the Com-  
 mittee are anxious to realize in this series. If it should  
 be deemed expedient to Engrave the compositions  
 selected, the Artist will receive a further remuneration to  
 superintend the publication. The Drawings, accompa-  
 nied by a sealed letter, containing the name and ad-  
 dress of the Artist, must be forwarded to the Honorary  
 Secretaries on or before Lady Day, 1844.

GEORGE GODWIN, } Honorary  
 LEWIS POOCK, } Secretaries.

4, Trafalgar-square, June 20th, 1843.

\*. The series by Mr. H. C. Selous, illustrative of  
 Bunyan's "Pilgrim's Progress," are being engraved by  
 Mr. H. Moses for the Subscribers of the current year.

**WEST OF SCOTLAND ACADEMY of the**  
**FINE ARTS.**—The THIRD ANNUAL EXHI-  
 BITION of the WEST OF SCOTLAND ACADEMY for  
 the WORKS of LIVING ARTISTS, will open in SEP-  
 TEMBER next, in the Exhibition Rooms, 51, BUCHAN-  
 AN STREET. No carriage expenses will be paid by the  
 Academy, except on Works from those Artists to whom  
 the Exhibition Circular has been forwarded. Works of  
 Art, which the Academy hope to be favoured with from  
 London and its Vicinity, will be called for, by intima-  
 tion being sent on or before the 1st of September next,  
 to Messrs. J. Mc. L. Bell and Co., East India Chambers,  
 Leadenhall-street, by whom they will be forwarded to  
 Glasgow.

The funds of the Glasgow and West of Scotland Asso-  
 ciation for the Promotion of the Fine Arts, are expended  
 in purchasing the Works of BRITISH ARTISTS.

By Order of the Council,

J. A. HUTCHINSON, Sec.

Committee Rooms, 68, St. Vincent-street, Glasgow,  
 August 1, 1843.

Miss GORDON'S ILLUSTRATIONS to "UNDINE."

**MESSRS. PAUL & DOMINIC COLNAGHI**  
 and CO. beg to announce the Publication of a  
 Series of VIGNETTE ILLUSTRATIONS to the above  
 popular Romance by the Baron de la Motte Fouqué.  
 The Series consists of Fifty-seven Plates, Etched by  
 Miss GORDON, from her own Designs, with letter-press  
 in French and German. Price, neatly bound in cloth,  
 £2 2s.; India Porofs, £3 3s.

Published by Paul and Dominic Colnaghi and Co., 14,  
 Pall Mall East, Publishers to her Majesty and the Royal  
 Family.

**FRESCOES BY PAUL VERONESE.**—

For Sale, by Private Contract, THREE SPLEN-  
 DID FRESCOES by this celebrated Master, now on  
 View, at No. 50, Pall-mall.

Most Valuable Collection of Paintings, including some  
 Works of the very highest class, and of singular  
 interest.

**MR. C. WARTON** begs to announce that  
 he has been favoured with directions from the  
 respected Proprietor, to submit to PUBLIC AUCTION  
 at the Hall of the ATHENÆUM, PLYMOUTH, on  
 Tuesday, August 29th, at Twelve o'clock, the WHOLE  
 of the VALUABLE COLLECTION of PICTURES  
 forming the well-known and justly-admired DEVON-  
 PORT GALLERY. Amongst numerous other speci-  
 mens it may be sufficient at present briefly to notice  
 Hilton's celebrated chef-d'œuvre, 'The Angel deliver-  
 ing St. Peter from Prison;' his grand design of 'Ri-  
 pah.' T. S. Cooper's splendid work, 'A Summer  
 Noon;' and its companion, 'The Intercepted Raid;'  
 also his noble work entitled, 'Amongst the Mountains  
 of Cumberland;' and two others by this great painter.  
 Three of the finest works of the lamented G. Cham-  
 bers; beautiful specimens of J. B. Pyné, P. Naysmith,  
 J. P. Davis, Reynolds, Gainsborough, Ibbotson, Broom-  
 berg, Procaccini, Cuyt, Guercino, J. Steen, S. Rosa,  
 Velasquez, Zuccarelli, Le Seur, &c. &c.

Descriptive Catalogues are preparing, and will be  
 ready in good time at Plymouth, Manchester, Liver-  
 pool, and at the principal Inns in the Western Coun-  
 ties, and of Mr. C. WARTON, No. 38, Threadneedle-  
 street, near the Bank of England.

Just Published,  
**BRITISH AND FOREIGN REVIEW,**  
 No. XXX. CONTENTS:—

 Further particulars may be obtained of Mr. Harrison, 6, Bowling-green-street, Kennington.

**WANTED,** a Second-hand FRENCH LAY FIGURE, in good repair.  
 Address (pre-paid), stating price, &c., to A. B., office of the Publisher of the ART-UNION, 132, Fleet-street.

On the 7th of August, with One Hundred and Thirty Engravings,

## A WEEK AT KILLARNEY.

BY MR. AND MRS. S. C. HALL.

This volume, so richly illustrated with subjects picturing the scenery, manners, and customs of the districts surrounding the far-famed Killarney lakes, will be comprised in about 200 pages, of a size not inconvenient for the traveller.

Much beautiful scenery will be for the first time described, as the authors have recently made an especial visit for the purpose.

By the aid of steam the magnificent scenery of these beautiful lakes is brought within two days' journey of London.

The volume will contain concise directions as to the various routes and modes of transit from London, the expenses of travelling, residence at hotels, coach and post fares, &c.; and all necessary information for the tourist.

London: Published by Jeremiah How, 132, Fleet-street; and sold by John Cumming, Dublin; and may be had at the Victoria and Roche's Hotels, at Killarney, and of all the booksellers in Cork.

#### THIS DAY IS PUBLISHED,

Price 3s. 6d.,

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 57.

LONDON: SEPTEMBER 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

**ROYAL COMMISSION OF FINE ARTS.**  
—The EXHIBITION of CARTOONS in Westminster Hall WILL CLOSE on SATURDAY, the 2nd SEPTEMBER. The Exhibition is open to the public gratis from nine till seven, except on Saturday, when it will be open, from ten till seven, to visitors paying One Shilling. Full Catalogue, Sixpence; abridged Catalogue, One Penny.

EXHIBITORS are requested to SEND FOR THEIR CARTOONS during the next week, namely, from the 4th to the 9th SEPTEMBER inclusive.  
C. L. EASTLAKE, Secretary.

**ART-UNION OF LONDON.**—The Subscribers are informed that the EXHIBITION of Prizes at the Gallery, in Suffolk-street, is OPEN DAILY, from Eight till Six o'clock; and that the Rooms will be illuminated on the Evenings of Tuesday, Wednesday, Thursday, and Friday, in the ensuing week, from Seven o'clock till Ten.

GEORGE GODWIN, } Hon. Secs.  
LEWIS POCOCK, }

August 26, 1843.

**THE ROYAL BIRMINGHAM and MIDLAND COUNTIES ART-UNION, for the PURCHASE of WORKS of LIVING ARTISTS.** 1843.  
Office, 67, New-street, Birmingham.

PATRONS:

Her Most Gracious Majesty the QUEEN;  
His Royal Highness Prince ALBERT.

VICE PATRONS:

Many of the most distinguished Nobility in the Midland Counties.

PRESIDENT FOR THE YEAR 1843:

The Right Hon. the Earl of DARTMOUTH.

J. PERCY, Esq., M.D., Treasurer.

G. M. MASON, M.A., Oxon, Secretary.

This Institution was established to aid in extending the love of the Fine Arts throughout England, and to give an encouragement to Artists beyond that afforded by the patronage of individuals; but more especially with a view to the attainment of that high condition of Provincial Art which is essential to the perfection of English Manufactures.

For the accomplishment of these objects, see the Rules of the Society as in the printed Circulars, which may be obtained of all respectable Booksellers and Carvers and Gilders in the Midland Counties; and of the following London agents:—Mr. T. Paternosters, 13, Charlotte-street, Fitzroy-square; Mr. Green, 14, Charles-street, Middlesex Hospital; Mr. M'Lean, Carver and Gilder, Fleet-street.

The Subscribers of the year 1843 will receive impressions of Mr. BELLIN's fine Engraving (just completed) from the Picture by Mr. FISKE, 'CHARLES V. IN THE STUDIO OF TITIAN.' Size of the subject, 24 inches by 19 inches.

Subscriptions are received by the Secretary; by the Clerk in attendance at the Exhibition Rooms, Temple-row, Birmingham; and by each of the appointed Agents of the Union, by whom a Treasurer's receipt, and an impression from the above-named Engraving for each guinea, will be delivered at the time of payment. To this advantage, and to the right of the Prize-holder to select his own Picture, the Committee invite the particular attention of the Subscribers; and it will be kept in mind that the print being the full value of the amount subscribed, the chance of obtaining a prize picture (perhaps of very high price) is an actual premium to the Subscriber.

\*.\* The earliest impressions will be delivered to the earliest Subscribers.

67, New-street, Birmingham, Aug. 26, 1843.

Now ready,  
**THE CHILDREN WITH RABBITS.**

Engraved in the finest style of Mezzotinto, from the interesting Picture painted for the Honourable Mrs. Bathurst, by EDWIN LANDSEER, Esq., R.A., and forming an exact Companion Print to 'The Sutherland Children,' by Samuel Cousins, Esq., A.R.A.

"Of all Mr. Landseer's portrait pictures, this is the most striking, and displays the most unquestionable marks of genius. The composition is very simple, but very sweet. It is one of those home pictures that must delight all classes, because all will understand and appreciate it."—ART-UNION.

Price: Prints, £2 2s.; Proofs, £4 4s.; Proofs before Letters, £6 6s.

London: Published by Henry Graves and Co., Publishers to her Majesty and H.R.H. Prince Albert, Pall-mall.

Just published,

**THE SHOOTING PARTY.**

Engraved in the finest style of Mezzotinto, by W. H. SIMMONS, from the justly celebrated original Picture, painted by FRANCIS GRANT, Esq., A.R.A., being the only Gun-Sport subject published from the Works of that most eminent Artist. This Engraving forms an appropriate and indispensable Companion to Mr. Grant's very popular series of 'British Field Sports,' and contains Portraits of the Earl of Lichfield, Viscount Melbourne, Earl Sefton, and other distinguished Noblemen.

Price: Prints, £3 3s.; Proofs, £5 5s.; Before Letters, £6 6s.

London: Published by Henry Graves and Co., Publishers to her Majesty and H.R.H. Prince Albert, Pall-mall.

**HUNT'S COMICALITIES.**

Lithographed by THOMAS FAIRLAND. Including 'The Young Shaver,' 'The Corn Question,' 'All Fours,' 'Master Isaac Walton,' 'How are You,' 'Master James Crow,' 'Miss Jim-i-ma Crow,' 'The Rival Artists' (a Pair), 'The Sleeping Nymph.'

Price: each, Plain, 7s. 6d.; Coloured, 12s.

London: Published by Henry Graves and Co., Publishers to her Majesty and H.R.H. Prince Albert, Pall-mall.

**RAFFAELLE'S CARTOONS FOR SALE.**

By PUBLIC AUCTION (without reserve), within the STRACON GALLERY, WEMYSS-PLACE, EDINBURGH, on Friday the 13th of October, 1843,

THE well-known Copies, by Sir JAMES THORNHILL, of the Celebrated CARTOONS by RAFFAELLE, now in the Gallery at Hampton Court. These much-admired Paintings embrace the following subjects:—

1. Paul Preaching at Athens.
2. The Death of Ananias.
3. Elymas, the Sorcerer, Struck with Blindness.
4. Christ Delivering the Keys to St. Peter.
5. The Sacrifice at Lystra.
6. The Apostles Healing in the Temple.
7. The Miraculous Draught of Fishes.

In addition to the above, there will also be sold—1. Painting by Velasquez, of 'Rebecca at the Well,' from the late Lord Eldon's collection. 2. 'The Crucifixion,' by Landyck. And 3. 'Christ at the Pool of Bethesda,' by Lanfranco.

The whole of these Paintings are now in the Stracon Gallery, Wemyss-place, Edinburgh, and may be seen by orders, to be received on application to Messrs. Todd and Romanae, W.S., No. 7, Great Stuart-street, Edinburgh; by whom also further particulars will be given.

Shortly will be published,

**CHRISTOPHER NORTH IN HIS SPORTING JACKET.** A full-length Portrait, by THOMAS DUNCAN, R.S.A.; engraved by WAGSTAFF.—Size of Print 26 inches by 18. Prints, £2 2s.; Proofs, £4 4s.

William Blackwood & Sons, Edinburgh and London: and F. C. Moon, her Majesty's Publisher in Ordinary, 20, Threadneedle-street, London.

Now ready, price 3s. 6d.,

**FELIX SUMMERLY'S HAND-BOOK FOR THE NATIONAL GALLERY;**

WITH REMINISCENCES OF FIFTY OF THE MOST CELEBRATED PICTURES DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN, JAMES, AND WILLIAM LINNELL.

An Edition, Printed in Umber, for Colouring, each picture on a separate leaf, is also published, price 10s., in a portfolio.

George Bell, 186, Fleet-street; and Paul and Dominic Colnaghi, Pall-mall East.

Imperial 8vo., price 3s. 6d.,

**THE BOOK OF BRITISH BALLADS.**

Edited by S. C. HALL, F.S.A.

With an Illustration on every page.

Part 8, containing KATHARINE JANFARIE, illustrated by WEIGALL.

The EVE OF ST. JOHN, illustrated by PATON.

RUDIGER, illustrated by WARD.

BARTHRAM'S DIRGE, illustrated by Mrs. M'LAN.

SIR CAULINE, illustrated by FRANKLIN.

Continued monthly, and to be completed in Twelve Parts.

London: J. How, 132, Fleet-street.

**BURNET'S ILLUSTRATED EDITION.**

Just published, in 4to., price £2 2s., in French boards, and on Royal Paper, with Proof Impressions of the Plates, price £4 4s., half morocco, gilt tops,

**SIR JOSHUA REYNOLDS' DISCOURSES,**

Delivered to the Students of the Royal Academy. Illustrated by Explanatory Notes and Plates, by JOHN BURNET, F.R.S., Author of 'Hints on Painting.'

James Carpenter, Old Bond-street.

Published in 4to., price £4 10s. in French boards; and on royal paper, 4to., with proof impressions of the Plates, and a Portrait of the Author, price £7 7s.,

**A TREATISE ON PAINTING.** In Four Parts. Illustrated by One Hundred and Thirty Etchings from celebrated Pictures of the Italian, Venetian, Flemish, Dutch, and English Schools; and Wood Cuts. By JOHN BURNET, F.R.S.

The parts may be had separate.

1. On the EDUCATION of the EYE. Second Edition. Price £1 5s.

2. On COMPOSITION. Fifth Edition. Price 15s. in boards.

3. On LIGHT and SHADE. Fifth Edition. Price 18s. in boards.

4. On COLOUR. Fourth Edition. Price £1 11s. 6d. in boards.

This work is particularly recommended to the Student in Art in the New Edition of the Encyclopædia Britannica—See the article 'Drawing.'

James Carpenter, Old Bond-street.

WITH ONE HUNDRED AND THIRTY-SIX ENGRAVINGS,  
PRICE TWELVE SHILLINGS, ELEGANTLY BOUND,

This volume, so richly illustrated with subjects picturing the scenery, manners, and customs of the districts surrounding the far-famed Killarney Lakes, is comprised in 200 pages, of a size not inconvenient for the traveller. Much beautiful scenery is for the first time described, the authors having recently made an especial visit for the purpose. Concise directions are given as to the various routes and modes of transit from London, the expenses of travelling, residence at hotels, coach and post fares, &c.; and all necessary information for the tourist.

"Although conscious that we have failed in giving the reader more than a limited idea of the grandeur and loveliness of the KILLARNEY LAKES, we trust we have succeeded in detailing their advantages, so far as to induce many persons to visit them who have been, hitherto, accustomed to make annual tours to the Continent. Those who require relaxation from labour, or may be advised to seek health under the influence of a mild climate, or search for sources of novel and rational amusement, or draw from change of scene a stimulus to wholesome excitement, or covet acquaintance with the charms of Nature, or wish to study a people full of original character,—cannot, we feel assured, project an excursion to any part of Europe that will afford so ample a recompense.

"While the Lakes of Killarney hold out strong temptations to the Tourist, inducements to the journey are enhanced by the ease and comfort with which it may be made. It is not too much to say that the World cannot elsewhere supply so rich a fund of enjoyment at so small a cost."—*Authors' Preface.*

14, Henrietta-street, Covent-garden, London.

FOREIGN PRINTS, WORKS OF ART, &c.,

IMPORTED BY

WILLIAMS AND NORGATE,  
FOREIGN BOOKSELLERS.

**THE MURDER OF THE INNOCENTS,**  
beautifully engraved by M. STEINLA, after an original Drawing by RAPHAEL, in the possession of the King of Saxony.

Artists' Proofs, of which very few remain	£7 0 0
Proofs, before letters, India paper	3 13 6
With the letters (Strages. SS. Innocentium)	1 16 0
Ditto India paper	2 8 0

**JOSEPH AND HIS BRETHREN.** Engraved by HOFFMAN, after PETER VON CORNELIUS.

Price	£0 18 0
Proofs, before letters	1 16 0
Artists' Proofs, of which few remain	3 0 0

**THE JEWS MOURNING AT THE WATERS OF BABYLON;** a beautifully executed Lithograph, after BENDEMANN'S celebrated Picture.

Price	£0 12 0
Proofs, before letters	0 18 0

**THE MARRIAGE OF THE VIRGIN,** after OVERBECK'S Painting in Count Racynsky's Gallery at Berlin. Lithographed by Mittag. 8s.

**THORWALDSEN'S PORTRAIT,** after KRUEGER. Mezzotint. By LUDERITZ. £0 10 0  
Before letters 1 0 0

**THE PILOT'S EXAMINATION.** Lithographed, after JORDAN. £0 8 0  
Before letters 0 12 0

NAGLER'S DICTIONARY OF ARTISTS.

**KUENSTLER-LEXICON, NEUES ALLGEMEINES,** od Nachrichten v. d. Leben u. d. Werken der Maler, Bildhauer, Kupferstecher, &c. &c. Von Dr. G. K. NAGLER. Vol. I. to XII. 8vo. Nürnberg. 1835—43. Each Vol. 9s.

Vol. XIII., Part 1 and 2, 1s. 6d. each.

DRESDEN GALLERY.

COPIES of the PAINTINGS in the ROYAL GALLERY of DRESDEN, on stone, by F. HANFSTÄNGEL.

Numbers 30, 31, and 32, containing—30. 'Magdalen,' Franceschini; 'Savant,' Mieris; 'Jacob and Rachel,' Giorgione. 31. 'Woman and Child,' r.d. Helst; 'Convent,' Ruissdæl; 'Holy Family,' Palma Vecchio. 32. 'Holy Family,' Raphael's school; 'Hunt,' Wouvermann; 'Roman Soldiers,' Caravaggio.

And of the larger edition, Numbers 17, 18, and 19.

W. and N. have received a supply of the above Nos. from Mr. Hanfstängel, which will be delivered to the Subscribers at the subscription prices.

Mr. Hanfstängel is preparing a new edition of the "Dresden Gallery," in imperial 4to., specimens of which will shortly arrive.

RETZSCH'S NEW WORK.

W. and N. will shortly publish a new (the 7th) Part of RETZSCH'S Illustrations of SHAKSPEARE, containing

**THE MERRY WIVES OF WINDSOR.**

Specimen Plates may be seen at their house; and it is requested, to avoid delay, subscribers' names may be forwarded as early as possible. Price 18s.

**RETZSCH'S ILLUSTRATIONS of HAMLET, MACBETH, KING LEAR, ROMEO and JULIET, TEMPEST, and OTHELLO.** Price 18s. each.

**SONG of the BELL,** 43 Plates, 15s.

Ditto, large paper, extra cloth, boards, 18s.

**GOETHE'S FAUST,** both Parts, 40 Plates, 15s.

**BURGER'S BALLADS,** 14s.

W. and N. have on hand other German Illustrated Works; and will receive regularly from Germany all new Prints and Works of Art suitable for the English market.

## THE DECORATION OF THE HOUSES OF PARLIAMENT.

WHETHER the advancement of the Fine Arts be dependant upon the social condition of the people, is consequent upon the refinement and taste of the wealthier classes; whether it be a sure sign, or accidental circumstance, the certain indication of the general progress of the community, or of merely a particular class; is a question much debated of late by those who, considering them as an educational power, are solicitous to extend their influence, and to guide that influence aright. Strictly speaking, civilization, to the extent required for their appreciation, is the property of all. There may be more or less of judgment and of feeling; reason and imagination may more or less prevail in their patronage and pursuit; but few minds are utterly deprived of that beneficent gift—the love of the beautiful; and none, even the most neglected, are entirely, hopelessly uninfluenced by its humanizing effect. Greece, in the time of Pericles—Rome, beneath the Antonines—France, under the sway of Louis XIV.—were doubtless periods of great intellectual vigour, and as such are frequently cited; but was this solely nurtured by the ruler? Was it not rather the consequence? Is it not the evidence of national progress? Athens, before the Persian war, had contributed but little to the intellectual superiority of Greece. But these graceful glories quickly followed, and outshone her conquests. Soon Literature and the Fine Arts found in this spot a consecrated home; for here, with a quicker perception, a more ardent zeal, with a nicer appreciation of excellence, and a spirit of patronage which, however at times turbulent, was at all times liberal, genius was encouraged by an ample field for exertion, public sympathy, and generous rewards. Socrates and Phidias died in prison,

still the people appreciated their worth; Pisistratus and Pericles patronised the Arts, still the conciliation of that people was the cause. Thus architecture and sculpture soon reached the highest perfection; the drama and lyrical poetry exhibited all the graces of Greek imagination; thought was elevated, and language was refined. And this was owing to the cast of thought, the tendency of the mind, habits, and customs of the other cities of Greece. National genius was not solely centred in Æschines, Sophocles, or Phidias; they were its evidence; they might serve to guide, and did, the force of the stream, but are not to be considered as its only channel. And Rome? the great division of classes which prevailed during the period immediately preceding her Decline and Fall might encourage the supposition that Art was the refinement of the great. We do not say it was not chiefly the appanage of the wealthy, but we know that its highest resources were constantly invoked, not by the capital only, but by the cities of the empire; and that public buildings raised by the emperor, at times to gratify his pride, were more frequently erected to conciliate the people. For their very nature, the purposes to which they were adapted, indicate not only the general tendency of the feeling for monumental works, but also their popular application. If, on visiting a city, the traveller surveys lofty edifices devoted to the service of religion, or raised by power and wealth, while the aspect of all beneath indicates both poverty and depression, he may well decide that in so far as these are signs of civilization, they are merely local; the indications of a limited advancement. But if he find palaces, thermæ, basilicæ, porticoes, triumphal arches, historic columns, aqueducts, public roads, mausoleums, bridges, theatres, and, towering above all, a colosseum of surpassing beauty, he can but consider these as witnesses which Time has raised, memorial Genius has erected, to the glory of a great empire; of a people great alike in Arts and arms, whose literature still sheds its graceful fascination, whose laws yet govern the intercourse of nations, and whose history connects the interests of that city with the destinies of the world. And such was Rome.

Let us now consider the age of Louis XIV. We do not in the least derogate from the fame of this monarch when we say he made the advancement of literature and Art a part of his ambition, and that in this respect he acted as much from national impulse as from kingly pride. He did not, like Peter the Great, find an empire barbarous, raise it in the scale of nations, and give it a place in history, through the splendour solely of his own name. The literature and arts of France had greatly advanced before Louis commenced his career. He opened for it indeed new prospects, made it more lucrative (he could not make it more honourable), and excited genius to increased activity. Regnier, Rotrou, Corneille, La Fontaine, would not less have been popular, had Louis never existed. Richelieu obtained from a reluctant academy the condemnation of the Cid; "but as beautiful as the Cid" was, nevertheless, a proverb. La Serres withdrew an audience by his trash for awhile, from the representation of Polyucte; but public feeling recoiled by the very force of its own injustice, and when next its author entered the theatre, the audience rose at his approach. In the Fine Arts, Mignard, Le Brun, Le Veau, Mansard, and Perrault, all felt and designed beneath the patronage of the monarch and Colbert; but this encouragement was a part, a noble and a becoming one, but still a part, of the political greatness of the minister rather than of the king. It seemed indeed, when Colbert was in power, as if it were the peculiar wish of the French monarch to announce to the world the esteem and veneration with which he regarded the human intellect. For Louis comprehended and acted upon the principle of his adviser, and honourable alike

to him and to his people was his avowal, that literary eminence forms no insignificant portion of the true greatness of a people. Thus he did much; for he felt the influence of his age, which was seen alike in the splendid rewards of the court, and the imbecile patronage of the Hotel Rambouillet. Nevertheless all personal influence with respect to literature and art is at best a casual, transitory, accidental good; superficial in its character, exotic in its growth. A king may encourage, a nation only can reward; he may stimulate, it is emulation which makes great; by the one genius advances, by the other it excels. The necessity of activity, the incapability of repose, the restless ambition of intellectual power, ennoble the possessor by their inherent force; great men by rivalry produce great men, and mighty works reflect one another. Athens could not endure the fame of Sparta, Sicyon, or Ægina; the trophies of Miltiades forbade Themistocles to sleep. We would not, however, be considered as disposed to argue, that the patronage of kings and the great of earth's creation, is of necessity misapplied, valueless, powerless, efficient only for casual good. On the contrary, it is beneficial as example. Man is a bundle of habits: he is frequently religious, submissive, or aspiring, by the mere impulse of imitation; but we would impress—we would inculcate—a purer truth, one more important, more consoling. It is with the Fine Arts as with religion, laws, and philosophy: they depend for existence on essential causes, not on accidental circumstances; they derive, they exert, they maintain their influence by the supremacy of their truth, equity, and moral force: nor only by these, but from the educated condition of the people. Where the nation is instructed, intellectual power is revered, whatever may be its form, however varied its type; if it be expressive, if it appeal to reason and the heart, it can never be dethroned; it is as a spirit mastering the affections of earth, and whose title to empire is the will of Heaven. Homer arose, the prophet of the coming greatness of his country! Sophocles and Plato were successively the spiritual form of that country's mind. Dante and Milton have each reflected back its rays; Michael Angelo and Raffaele are but links in the same chain; however various their endowments, in pursuits dissimilar, of periods wide apart, they still maintain the mastery they won, not by the smiles of power or the interest of statesmen, but because their works are as the precious lifeblood of a masters spirit, which quickens, enlarges, and confirms the principles and affections of the living for ages and ages to come. They are ours, and for us; they console us in sorrow, they are companions in retirement, they are never unwelcome, they have ever a fresh charm; friends may fail, prosperity may be followed by misfortune, but in sickness as in sorrow, in age as in youth, they suffer no abatement of interest; they retain the same aspect of beauty—

"To latest age the same, that first in youth we loved."

We have been anxious to premise these views from a conviction that now, when patronage is evoked for the Arts, we should know what that patronage, to be enduringly effective, is.

We have said, we repeat it, the only efficient and enduring patronage is that which is dependant upon the moral state, the intellectual condition of the people. A bad man cannot appreciate an act of virtue. An uneducated and debased community can never commune with or feel the refinement of the beautiful, either intellectual or imitative. Believing, therefore, the interest evinced, the zeal shown for the decoration of the new Houses of Parliament to be an indication of the growing strength and more refined state of public feeling, we shall now proceed to consider the mode and style most suited, with reference either to the building—its purpose; the people by whom it is raised; and the institutions with which it is connected. Mural decoration, when emblematic

or confined to the mere fanciful and arbitrary arrangement of colour, when proceeding from no settled plan, and of which harmony and unity of arrangement are not essentials, may be considered as simply ornamental. When, however, a higher object is sought—when we call in the resources of imitative works of Art, not merely to please, but to exercise the imagination, to recall the fleeting incidents of the past, and to transmit them with unimpaired interest to the future; when we seek to impart an historical interest, to make a building a public monument, illustrative of the rise and progress of a commonwealth—then its decorations, where not architectonic, may be defined as **DRAMATIC** or **LYRIC**. For its pictorial embellishments may be considered as descriptive poetry, thought and feeling being transmitted and awakened by a similar exercise of the imagination, though representing its subjective motive in a varied form. A national building, such as the one in question, can admit but of one mode: whether we employ fresco, oil, or statuary, they must be the means to an uniform end, and that must be predominantly **HISTORICAL**. Now by history we do not mean the illustration only of scenes connected with the rise and fall of princes, the extension or loss of empire, or of events merely accidental or external; but those which narrate the progress of the commonwealth, the establishment of civil rights, which record heroic action and display the genius of the people. History is both poetry and philosophy. The union of these characters is but rarely found in the historian—it is not to be asked for in the artist. But, nevertheless, the artist must remember that, like the historian, he must narrate general truths, by vivid representations of particular facts.

Pictorial illustration, properly considered, is an epic poem, or rather may be governed by the rules applicable to the drama, where events in themselves true, are detailed and recalled by a license of the imagination, which comprises in one period the events of many, and conveys results in a manner more allusive than exact. To make the past present; to make us companions of the hero in the battle-field, of the statesman in council, of the people in all that concerns their civil interests; to awaken the detestation of intolerance—of despotism, and to teach men to abhor the subservience of a minister, whether that minister be Crammer or Strafford; to place our ancestors before us, in all the peculiarities of their dress and time, until they seem not parts of a personified allegory, but beings of flesh and blood: such are the duties which properly belong to the artist as to the historian. But in doing this, however susceptible subjects may be of imaginative treatment, the facts chosen must be true, and the event must be detailed with strict relation to costume, circumstance, and time. We shall illustrate our meaning upon this point by reference to a subject chosen for one of the prize cartoons lately exhibited. We do not, and we are anxious to impress this on the minds of our readers, in any manner wish to discredit the opinions formed, and most justly, of that most excellent work of Art, particularly as regards its conception, to which only we refer; but we desire to show the importance of a well and carefully digested knowledge of every historical subject when selected. We allude to the 'First Trial by Jury.' We believe that on this point many erroneous opinions exist, and whether it was an Anglo-Saxon or a Norman institution to be still a disputed point; but that it was a mode of procedure resembling that of the present day may be very safely denied. "Trial by Jury," says Sir Francis Palgrave in his "History of the Rise and Progress of the English Commonwealth," "according to the old English law, was a proceeding essentially different from the modern tribunal still bearing the ancient name by which it has been replaced; and whatever merits belonged to the original mode of judicial investigation (and they were great and unquestionable), though ac-

companied by many imperfections, such benefits are not to be exactly identified with the advantages now resulting from the great bulwark of English liberty. Jurymen, in the present day, are triers of the issue; they are individuals who found their opinion upon the evidence, whether oral or written, adduced before them, and the verdict delivered by them is their declaration of the judgment which they have formed. But the ancient jurymen were not empanelled to examine into the credibility of the evidence; the question was not discussed and argued before them; they, the jurymen, were witnesses themselves, and the verdict substantially the examination of these witnesses, who of their own knowledge, and without the aid of other testimony, afforded their evidence respecting the facts in question to the best of their belief." We believe that, until the reign of Henry VI., the trial by jury was to all intents and purposes a trial by witnesses. They were brought from the neighbourhood where the disputed fact was supposed to have occurred, because, as the form of the jury process said, "they were the persons by whom the truth of the matter might be better known;" no doubt upon the principle *vicini vicinorum præsumuntur scire*. As a proof of the limitation of their character, one exception, arising from the above principle, was made; for, although all other kinds of murder might be tried by a jury, murder by poison was excepted, because, say the ancient writers, "the crime is so secret that it cannot be the subject of knowledge by the county." We are induced to dilate upon this point, in order to show that if walls are to be painted, to be made the records of historic truths, they must not pourtray the existence of an institution in an age when it was unknown, or existing under a very different form; that anachronisms must be avoided, and no detail of costume or place omitted that may increase effect by intelligent and truthful accessories. More particularly the historic progress must be distinctly marked—the social, religious, and political influence which successively prevailed from the Norman conquest, when British history has a more marked and determined feature (for the Anglo-Saxon period is a brilliant episode)—must be characteristically expressed. The reign of Henry II.—the Crusades—the fantastic spirit of religious chivalry—the events narrated by the Troubadours—the signing of the great Charter—all are suggestive; each alike a theme. Thence the reigns of the Plantagenets—the institution, and, so far as is possible, the election of free parliaments—the intellectual influence which led to the erection of Windsor and Westminster Hall, that diffused itself around, and amid which the poet Chaucer arose to give form, order, charm, and purity to his native tongue:—all, we again repeat, are fit subjects to relate historic truths. The Permanent Council of Henry IV., hardly inferior in importance to the Petition of Right—Poitiers, Cressy, and Agincourt—the disputes of the rival houses of York and Lancaster—the transition state of literature, law, and social custom in the period of Henry VII.—the extension of commerce—discovery of printing—the press of Caxton—and the doctrines of Wicliffe, extend the dramatic series we have sketched. From thence how great the actors, how sublime the genius, how awful the events! Bacon, Shakespeare, Martin Luther, the Reformation—the execrable tyranny which perished in the loathsome deathbed of Henry VIII.—his last most gallant victim, Surrey—the martyr death of Ridley—the translation of the Bible, and its first public reading to the people—are all deserving of the poet's thought and the artist's pencil. Nor the less should particular periods of popular feeling be avoided. We cannot, indeed, detail a civil war; but acts of individual gallantry form its episode, and public commotions are susceptible of much narrative treatment. The rebellion of Jack Cade—the meetings of the people in the latter part of the reign of Elizabeth—are illus-

trative of the state and progress of opinion in the masses, and, as such, deserve attention. But we must here stop, or we might make this article a summary of the History of England; and, having expressed our view of the general principles upon which historic decoration rests, we shall now proceed to the discussion of the particular mode, with reference to the plan and arrangements of the new Houses. The plan of these it is difficult popularly to describe: it appears a long gallery, of unequal breadth. The royal entrance is beneath the Victoria Tower, in the N.W. angle of the building: and here the records are proposed to be arranged. Ascending the royal staircase, you enter the GUARD and QUEEN'S ROBIN Room; and thence, by the VICTORIA GALLERY, approach the HOUSE OF PEERS. The House Lobby, at the extremity of this apartment, which opens into the Peers' Corridors, is terminated by the grand CENTRAL HALL; from whence corridors and lobbies, similar to those described, conduct you to the House of Commons. From the grand Central Hall you enter that of St. Stephen's, which is terminated by Westminster Hall. Thus the eye is led from space to space, through apartments varied in decoration, varied in expression, yet all tending to maintain the impression first excited.

"Straight the doors,  
Opening their brazen folds, discover wide  
Within, her ample apices, o'er the smooth  
And level pavement."

A great building is a great epic, and he has but half understood the extent, or cultivated the powers of the imagination, who limits all poetry to metre. It is not the well-poised jingle of words that constitutes a poet, or Grub-street were equal to Parnassus; but it is the thought proclaiming great truths, which recalls and forms new combinations of ideas, which weaves the graces of harmony in diction with the moral feeling and lofty conception of a pure intellect, which reflects the light of heaven, and like that heaven sheds its glory, its breadth of repose, and wondrous aspect of beauty over all who gaze on the eternal majesty of its design. A man who cannot feel the poetry of architecture, will but indifferently enjoy the pleasures of the kindred sciences.

The other rooms it is hardly requisite to describe: they consist of division galleries, private corridors, and apartments for the officers of the Houses, spacious courts, and the residence of the Speaker; but our purpose being to dwell on the public apartments, we shall pass the others without further notice.

Mr. Barry, in his report to his Royal Highness Prince Albert on the internal decorations of the new Houses, recommends "that the walls of the several halls, galleries, and corridors of approach, should be decorated by paintings placed in compartments, formed by such a suitable arrangement of the architectural design of the interior, as will best promote their effective union with the arts of sculpture and architecture. These pictures to be wholly free from gloss on the surface, that they may be perfectly seen and fully understood from all points of view. That all other portions of the plain surfaces of the walls should be covered with suitable architectonic decoration or diapered enrichment in colour, occasionally heightened with gold, and blended with armorial bearings and other heraldic insignia. That such of the halls as are groined should have their walls decorated in a similar manner, with the addition occasionally of subjects of Art, interwoven with the diapered ground, but so as not to disturb the effect of the architectonic decorations, or interfere with the elementary features of the architectural composition. That such of the ceilings as are flat should be formed into compartments by moulded ribs, enriched with carved, heraldic, and Tudor decorations. That these ceilings should be relieved by positive colour and gilding, and occasionally by gold grounds, with diaper enrichments, legends, and heraldic

devices in colour. That the floors of the several halls, galleries, and corridors should be formed of encaustic tiles, bearing heraldic decorations and other enrichments in colours, laid in margins and compartments, in combination with polished British marbles. That, to promote the art of sculpture and its effective union with painting and architecture, statues should be employed to divide the paintings on the walls. The statues to be of marble, of the colour of polished alabaster, raised on pedestals, placed close to the walls on niches, surmounted by enriched canopies."

**WESTMINSTER HALL.**—This apartment is 239 feet long, 68 feet wide, and 90 feet high. Mr. Barry proposes to make this a depository for all trophies obtained in wars with foreign nations. That pedestals, twenty in number, should be placed so as to form a central avenue, 30 feet in width, from the north entrance to St. Stephen's Porch, for statues of the most celebrated British statesmen. The statues, 26 in number, proposed to be placed between the pictures against the walls, to be those of military and naval commanders. The subjects of the paintings, 28 in number, 16 feet in length, and 10 feet in height, to be the splendid achievements of the united forces of the empire. To these proposals we cordially agree. The pictures, statues, and trophies should be chronologically arranged, and the subjects as much illustrative of periods as possible, so as to form a cycle. To the central avenue we must humbly defer; two lines of statues in a *military room* would suggest the idea of rank and file; and a straight line strongly marked, is apt to impart a stiff rigidity to the scene. We admit the advantage of space to relieve this; yet as nothing is so apt to produce fulness of effect, and to become oppressive, as the continuity of sculptured forms, we could wish it reconsidered. Half the impressive beauty of sculpture is lost by injudicious arrangement; thus Westminster Abbey is destroyed by monuments unsuited to its character, and inconsistent with its space. And if you desire to impart a military impression, omit the statesmen: those qualities of the mind, which make men great in the council and the camp, are not uncommon; but opposition of character will cause difference of treatment, and this will destroy uniformity of effect. The trophy, the picture, and the statue of eminent military chiefs,

"Their visages and stature as of Gods,"

would by unity and completeness of purpose, on the contrary, secure this; and the hall would become not the army list illustrated in marble, but a Walhalla of national respect.

**ST. STEPHEN'S HALL** succeeds. This will be 90 feet long, 30 feet wide, and 50 feet high. This, Mr. Barry proposes, and to this we submit no opposition can be raised, should be devoted to the reception of paintings illustrative of the civil progress of the state, or commemorative of great domestic events. With these we would introduce the statues of the statesmen, and connect them with those of eminent orators and judges, commencing the series from the hall, so that, as the spectator advanced to the House of Commons, he should feel the reverence due to the scene of their past glory—the arena of their ambition, where they fell by faction, or well-exerted power. Pictures and statues lose their dignity and force unless they are *suggestive*; the mind that cannot perceive their artistic beauty may be stricken by their historic import; they make the past present; they recall the struggles, heroic devotion, courage which has endured, the indomitable energy which never has succumbed;—and thus the memory of the illustrious dead, blending with the sculptured form, and hallowed recollections of the spot, impart a truthfulness, an identity, and a charm which imagination could not wholly lend, nor time, with all its magic influence, confer.

**THE CENTRAL HALL.**—This will be an octagon of 60 feet in diameter, and 50 feet high, covered with a groined ceiling in stone. As each

side will be wholly occupied by windows and arched openings of access, paintings cannot form any part of its decoration. Were this even not the case—were the surface not so broken—as this will be a place of busy resort, a kind of parliamentary exchange, paintings would be out of place, or be seen only during the recess. It may, however, adds Mr. Barry, be extensively decorated with sculpture. In the centre of the pavement might be placed a statue of her present most gracious Majesty, upon a rich pedestal of British marble, highly polished, and relieved in *parts by gold and colour*. The niches in the walls and screens might be filled with statues of her Majesty's ancestors in chronological order, even up to the period of the Heptarchy. In front of the eight clustered pillars in the angles of the hall might be placed with good effect *sedent* statues of some of the great lawgivers of antiquity. That sculpture would be here well placed we have no doubt; that the subjects should be regal, except as expressive of the union of the monarchical with the legislative powers of the state, is a question; but that any, or one more than another, should be pranked in gold and colours, or that the lawgivers of antiquity (if by that term Lycurgus, Solon, Confucius, Brahma—to all of whom the term applies) should be introduced, we must still further question. We would rather see the statues of great orators, without reference to party; of eminent lawyers; or the classics of law, such as Blackstone—men who have softened down the vindictive spirit of the statutes, and showed how compatible mercy is with *JUSTICE*—how thrice blessed are its fruits in the administration of laws—men such as Romilly and Howard; or of those who have spread the blessings of education, and established, like Clarkson and Wilberforce, that great principle—the hereditary freedom of the human race. Eloquent witnesses of the divine origin of man; assertors of his natural rights; the source and cause of that most elevating truth which will ever invest our land with a feeling of sacred respect, that here, in this England, the moment the foot of the slave rested upon its hallowed soil the chains fell which had linked him to the oppressions of his race—"that his soul walked abroad in its majesty, and that he stood redeemed, regenerated, and disenthralled by the irresistible spirit of the British Constitution."

**THE VICTORIA GALLERY.**—This will be 130 feet long, 45 feet wide, and 50 feet high, and will admit of both painting and sculpture. The subjects of the paintings on the walls, 16 in number, which may be 12 feet long and 10 feet high, might, Mr. Barry thinks, relate to some of the most remarkable *royal pageants* of British history. Now this Victoria Gallery is the medium of the Sovereign's approach to the House of Lords: be this so; the procession is of itself the pageant of the scene. Would it be desirable, then, to introduce a kind of rival series? And what so inexpressive—what so uninteresting? We rather submit that here pictures might be introduced of events in which sovereigns of the empire have taken a conspicuous part, with statues of the Queen's ancestors; thus a noble lesson would be read of the transitory state of human greatness; thus a powerful incentive be given to high purposes; thus the selfishness of the world be stricken from the heart by the memory of acts on which we dwell with pleasure, be it the laws of Edward, the bravery of the Black Prince, the mercy which has forgiven, or the generous appreciation of worth which has ennobled even the nobility of kings. Pride is an incentive oftentimes to acts of good; and what rivalry is so becoming as the rivalry of virtuous minds? Any subject that has motive—whether it be drawn from the page of Froissart or the fictions of Scott; the first Bible presented to a king; the interview of Jeanie Deans with the Queen of George II.—so it bear relation to human life, have affinity with human feeling, is preferable, infinitely so, both in time, place, and thought, to a pageant,

the mimic mummery of the Heralds' College. We have no space, in a building that has centuries of historical recollections, for the field days of Gwillim, Vincent and Sir Isaac Heard. The corridors of access throughout the building will be 12 feet wide; and these (and we have no doubt of the value of the suggestion) Mr. Barry would decorate with portraits, as well as with paintings illustrative of remarkable events and eminent personages. For this purpose, 2600 feet in length of wall on the principal, 900 on the second, and 400 on the two-pair floor—the height of all about seven—might be appropriated. The House of Lords and House of Commons—the former, 93 feet long, 45 feet wide, and 50 feet high; the latter, 83 feet long, 46 feet wide, and 50 feet high—will greatly exclude both painting and sculpture; and, as their decoration, therefore, will be strictly architectural, unless stained glass be introduced, we shall pass any further consideration of the details.

**THE QUEEN'S ROBIN ROOM.**—This will be 38 feet long, 35 feet wide, and 20 feet high; and this, we think, as well as being ornamented with enrichments of colour, might also be made illustrative of scenes from purely imaginative subjects, taken from Milton, Spenser, and Pope. The Guard-room, adjoining, we concur in recommending to be covered, with respect to its space, with representations of battle-scenes and pageants (if need be), in so far as they afford an opportunity of displaying the warlike costumes of different periods. The other rooms are to be appropriated to the various officers of the house. It is difficult, and we feel it, to prescribe rules for the decoration, by imitative works of Art, of public buildings. Where, however, the character is definite, its illustration is so. History, tradition, institutions—the memorials of the lettered wisdom of the past—the records of greatness, of which Time has been the guardian—scenes, the theme of Milton—those imaginative creations of the mind of which Spenser is the type—the drama of human life, as reflected in the page of Shakspeare—the names of Bacon, Locke, Newton, Watt—all alike are motives—all alike are suggestive of subjects which Michael Angelo would have selected for their greatness, and Raffaele have dwelt on, for the display of that wondrous combination of power which blended the excellencies of many schools in the unapproachable combination of his own.

Of equal importance to choice of subject, and its poetic conception, is the mode of execution. To this we would most earnestly direct attention. These buildings are to become not only the record of the present state of Art, but an example for the future. They are not to be made expressive of the fleeting shades of opinion, but of one grand, uniform, complete idea. All decoration, therefore, must be strictly architectonic; it must possess no independent, separate, or adventitious character, but emanate, exist, be accordant with, and inseparable from, the place it occupies: a part and parcel of the grand whole. Greek architecture may be considered as the form of ideal beauty; Gothic as that form varied, rather than debased. One is as truth revealed from Heaven; the other, as that truth mixed with tradition. Lightness, elegance, a calm religious grandeur, continuity of outline, and richness of decoration, seem to us the general characteristics of the Gothic; it is impressive of the time, the chivalrous orientalism, and religious superstition, amid which it arose. Nothing vague, indefinite, forced, or extravagant, can form a portion of its embellishment, unless we are disposed to imitate some of the depraved examples we may find. In mural decoration we seek to enliven without destroying architectural effect; to aid it by imparting feeling arising from poetic conceptions. It is as imagination to reason, which arrays the pure thought in the hues of creative beauty; it is as a truth uttered in words the most select and suited. Decoration for these houses should possess a classic, severe, and simple refinement.

Heavy ornaments and intense hues may produce gorgeous, but never elevated, results. Pure taste is never a voluptuary in colour. The statues should express either intellectual power or moral superiority; their action should be calm, simple, and natural, indicative rather of repose than of passion, or suspended emotion. Fresco, as the means of mural decoration, is undoubtedly the most adapted for the artist's skill as well as for the building. It will endure, however, no hesitating, fashionable, or pretty style of treatment: it is an intellectual power, and as such can alone be exercised. Light is the life of architecture, and Fresco is its feeling. Form without colour is impassive; no eye can trace the slightest atom in the structure of the world without submissive wonder at the greatness of its design; but the beauty which invests the eye until it becomes a sense, is the property of the hues that nature sheds in rich fluidity over all. Rigid outline we hope to see avoided; it has no existence in nature: it arises only from the reflection of matter against space, and is always diffused or lost by contrast. The French, theatrical in all things, would reduce the representations of human life to those of the stage, or sculptured forms in relief. Of composition it is hardly requisite to speak; it is not to be taught by lessons, it is a gift: an unimaginative mind will never be improved by discourses however eloquent, or elevated by any examples, although those examples are Da Vinci, Michael Angelo, Raffaele, or Flaxman. But if rules are required, it is to teach us what to avoid. Truth, expression, naturalness, simplicity, and a chastened poetic treatment, form the basis of historical composition; without this, walls have been painted and halls adorned, but not by the masters we have named. Finally: in every room let the action be progressive and conducive to the expression of one complete and great idea.

We would not overrate this subject, yet we confess that very few appear to us to combine so much of interest and hope. Unjust laws—the capricious tyranny of opinion—may be wholly changed or partially modified; but the opportunity of making the Fine Arts a part of the trophies of a Government has seldom occur-

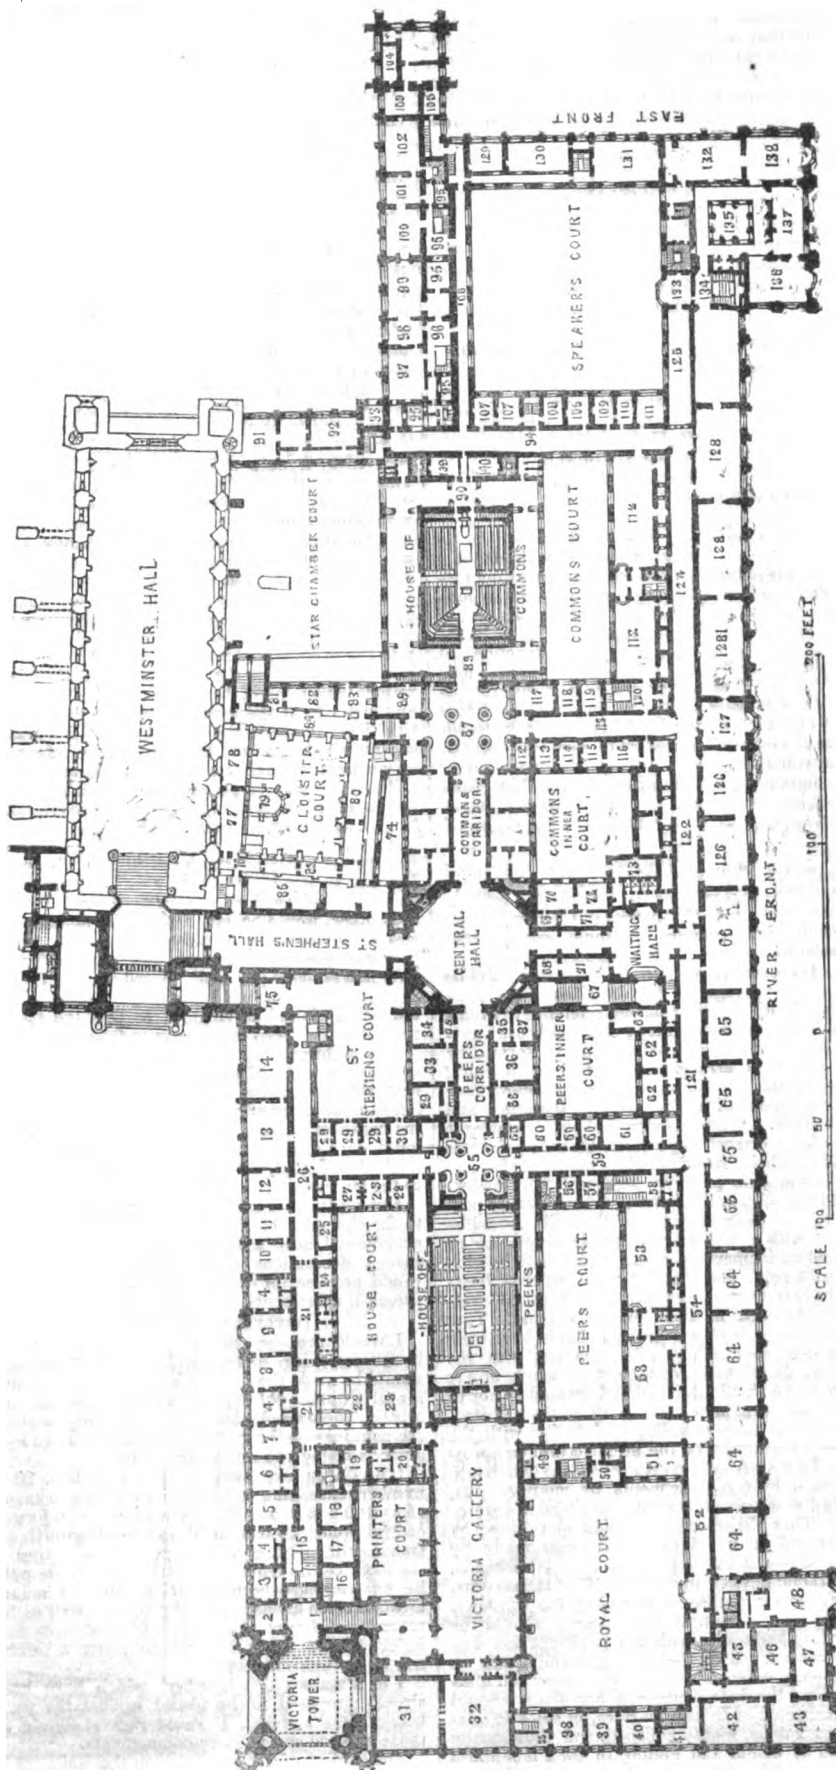

red. It marks a period—it defines the condition of public opinion. Peace has her victories, no less than war. A man who has endowed a parish-school, who has enlarged the means for the education of the poor, who has reared a mind in the knowledge of relative duties, has done more for the promotion of human happiness and national greatness than any warrior, however splendid his career. He, too, who has tended to increase the intellectual pleasures, to purify the mind from the influence caused by common avocations and selfish, covetous pursuits, has incidentally but largely promoted the progress of refinement, by opening new sources of mental enjoyment. To pass from general results to particular consequences, we may state that to the Arts of this country the impulse the erection of these Houses will give them, must inevitably be most beneficial. A higher style of mural decoration will induce a nobler style of architecture. To compare the edifices raised by the Catholic religion with those of the Reformed creeds, we may truly say the former seem to be erected in honour of the Deity, the latter for the benefit of the minister; and of many of our public buildings, we may add, they are only so far public, or possess a public character, as they stand in the public street. Now, what caused the erection of those magnificent structures, the cathedrals of Europe? The piety of the people, the zeal of artists awakened by the patronage of the state, and the policy of the magnificent ceremonial of the Church. This produced the frescoes of Michael Angelo and of Raffaele, and made this form of Art, a scripture history, the type of moral truth. Many a mind might have sunk beneath neglect and poverty, which has been restrained and purified by the silent contemplation of their religious themes. And if we recall the desolating effects of conquest, beneath which Italy has struggled from the period of her Gothic conquerors, it is not too much to say that these graceful efforts of genius have done much to nourish and maintain among her gifted sons that love of literature and art which is still their pride, their honourable distinction, and consolation.

Have we not witnessed in our own days the in-

fluence the Fine Arts possess to impart and maintain that love of country, without which its citizens can never make it powerful and great? The sense of national humiliation, the hatred of a foreign yoke, the wish to concentrate the scattered elements of opinion and feeling which shook the German mind, which had become the imaginative dream of the student, the settled thought of the citizen, pervading all ranks, uniting all ranks in one common love of "Fatherland," finally wrought out its long-repressed energies; not alone in the council, the busy mart, or well-fought field, but by the restoration of national literature, and the revival of national Art. Hence arose, beneath the direction of the King of Bavaria, the edifices of Munich; from this cause proceeded the enthusiasm for the early German school, which, carried to excess, finally assumed its most definite character in the modern frescoes of Overbeck, Veit-Schadow, Cornelius, and Schnorr. For, by whatsoever the mind is powerfully impressed, it seeks to make palpable to sense. Painting is a powerful means of instruction; sculpture, a powerful means to record the memory of great men. A person who understands well chosen subjects, and could explain them, could not be devoid of knowledge, nor want the opportunity for its constant extension. The Creator has endowed man with reason for his guide, the imagination for his happiness; one power enables us to discern his wisdom, the other to dwell with pleasure and imbibe upon our hearts the impressions awakened by the wondrous beauty in which he has clothed the physical forms of nature. Be it for us to follow the supreme will; be it our task to wean the humble and the lowly from habits consequent upon their condition, to impart a purer taste to the wealthier classes, to excite a nobler ambition in the artist, and a greater interest in the progress of the Arts in the minds of our fellow men. To teach men the duties they owe to themselves and to each other is to make them good citizens; to enable them to feel the refinement of the imaginative creations of the mind is to give them a better idea of their own powers, to provide them oftentimes with an unoberved instructor, and an unfailing source of rational amusement.

[Since these remarks were written, the "SECOND REPORT OF THE COMMISSIONERS ON THE FINE ARTS" has been printed. The reader will perceive that we had forestalled much of the information it contains; without, however, feeling at liberty to avail ourselves of the document to a greater extent. But now that it is become public property, we cannot hesitate to transfer it entire into our columns.—28th August.]

# THE NEW HOUSES OF PARLIAMENT. SECOND REPORT OF THE COMMISSIONERS ON THE FINE ARTS.

To the Queen's Most Excellent Majesty,  
We, the Commissioners appointed by your Majesty for the purpose of inquiring whether advantage might not be taken of the rebuilding of your Majesty's palace at Westminster, wherein your Majesty's Parliament is wont to assemble, for the purpose of promoting and encouraging the Fine Arts in your Majesty's United Kingdom, and in what manner an object of so much importance might be most effectually promoted, humbly report to your Majesty, that having, in furtherance of the objects proposed by us in our first report, and sanctioned by your Majesty, invited a competition in cartoons, we have now humbly to state to your Majesty that the competition referred to has taken place, and that we are satisfied with the evidence of ability afforded, not only by the works of the successful candidates, but by those of many others.

Having satisfied ourselves respecting the attainments of many British artists in the practice of cartoon-drawing, and respecting their capacity to attain excellence in those qualities which are essential in historical painting, we now propose, in pursuance of the plan before announced by us, to invite artists to exhibit specimens in fresco-painting of a moderate size, which, by being portable, will enable all candidates for employment in that method of painting to send in works exhibiting their qualifications therein as painters and colourists, and which, taken together with the larger compositions in drawing which they have exhibited or may exhibit, and with other existing evidences of their talents, may enable us to proceed to the selection of artists for the decoration in fresco of certain portions of the palace. Nevertheless, as paintings executed in other methods may be free from a shining surface, and may therefore be deemed by some artists to be fit for the decoration of walls, we have invited such artists to exhibit specimens of the methods in question, and shall regard such methods as open for consideration.

With respect to sculpture, we have announced that various statues will be required for the decoration of the palace, and we have invited artists to exhibit models, in order to assist us in the selection of sculptors to be employed.

With regard to decorative Art of various kinds—namely, glass-staining, arabesque-painting, wood-carving, ornamental metal work, and ornamental pavements—we have, in like manner, issued notices, inviting artists and others to send in specimens, in order to assist us in the selection of persons to be employed.

We have further humbly to state to your Majesty, that the claims of candidates for employment in oil painting, and other departments of the Art, besides historical painting, will be considered hereafter, and that the order in which the several branches of Art and decoration applicable to the embellishment of the palace have been considered by us, has been, and must continue to be, determined by the time requisite for the preparation of the works, the study required by the artists in modes of execution which are new to them, and by the progress of particular portions of the building.

We humbly subjoin, as an appendix to this report, some papers treating in detail various matters connected with the subject of our inquiry, and explanatory of the proceedings of the commission; and, with respect to the architect's report, have to state, that we have taken it into our attentive consideration; but, although we have, in consequence, issued various notices calculated to assist us in coming to a final decision thereupon, we are not prepared to lay any specific recommendation before your Majesty, both in consequence of the building not being sufficiently advanced, and the result of the inquiries and experiments made and making by and under our direction not being suffi-

ciently ascertained, to justify us in coming to any final conclusion in this respect. And with reference to that part of the architect's report which relates to local improvements in the neighbourhood of the palace, we consider that, however deserving of attention the improvements in question may be, they do not come within the inquiry with which we are intrusted.

## ARCHITECT'S REPORT.

Westminster, Feb. 22, 1843.

SIR,—As presiding over her Majesty's Commissioners for the encouraging the Fine Arts in connexion with the rebuilding of the new Houses of Parliament, I venture to address your Royal Highness, and, in compliance with the instructions of the commission, to offer the following suggestions relative to the internal finishings and decorations of the new Houses of Parliament, the completion of the exterior, and the local improvements which are, in my opinion, necessary to give full effect to the new building; and, by way of illustration of the remarks which I have to make on these subjects, I beg to transmit the accompanying plan of the principal floor of the new building, a general plan of part of Westminster, in which the new building is shown in connexion with various improvements proposed to be made in its locality, and two drawings relating to Westminster-bridge.

With reference to the interior of the new Houses of Parliament generally, I would suggest that the walls of the several halls, galleries, and corridors of approach, as well as the various public apartments throughout the building, should be decorated with paintings having reference to events in the history of the country; and that those paintings should be placed in compartments formed by such a suitable arrangement of the architectural design of the interior as will best promote their effective union with the arts of sculpture and architecture. With this view I should consider it to be of the utmost importance that the paintings should be wholly free from gloss on the surface, so that they may be perfectly seen and fully understood from all points of view. That all other portions of the plain surfaces of the walls should be covered with suitable architectonic decoration or diapered enrichment in colour, occasionally heightened with gold, and blended with armorial bearings, badges, cognizances, and other heraldic insignia, emblazoned in their proper colours. That such of the halls as are groined should have their vaults decorated in a similar manner, with the addition, occasionally, of subjects or works of Art so interwoven with the diapered ground as not to disturb the harmony or the effect of the architectonic decorations generally, or interfere with the elementary features of the architectural composition. That such of the ceilings as are flat should be formed into compartments by moulded ribs, enriched with carved heraldic and Tudor decorations. That these ceilings should be relieved by positive colour or gilding, and occasionally by gold grounds with diaper enrichments, legends, and heraldic devices in colour. That the screens, pillars, corbels, niches, dressings of the windows, and other architectural decorations, should be painted to harmonize with the paintings and diapered decorations of the walls generally, and be occasionally relieved with positive colour and gilding. That the door-jambs and fire-places should be constructed of British marbles, of suitable quality and colour, highly polished, and occasionally relieved by colour and gilding in their mouldings and sculptural enrichments.

That the floors of the several halls, galleries, and corridors should be formed of encaustic tiles, bearing heraldic decorations and other enrichments in colours, laid in margins and compartments, in combination with polished British marbles; and that the same description of marbles should also be employed for the steps of the several staircases.

That the walls, to the height of from 8 to 10 feet, should be lined with oak framing, containing shields with armorial bearings, emblazoned in their proper colours; and an oak seat should in all cases be placed against such framing. That the windows of the several halls, galleries, and corridors, should be glazed doubly, for the purpose of tempering the light, and preventing the direct rays of the sun from interfering with the effect of the internal decorations generally. For this purpose the outer glazing is proposed to be of ground glass in single plates, and the inner glazing of an ornamental design in metal, filled with stained glass, bearing arms and other heraldic insignia, in their proper colours; but so arranged as that the ground, which I should recommend to be of a warm yellowish tint, covered with a running foliage or diaper, and occasionally relieved by legends in black letter, should predominate, in order that so much light only may be excluded as may be thought desirable to do away with either a garish or cold effect upon the paintings and decorations generally. Practically, I consider that the double glazing will be of essential service in carrying out the system of warming and ventilating proposed to be adopted in the building generally; which system renders it necessary that the windows in those portions of the building above referred to should be made to open, so that all prejudicial effects upon the paintings and other decorations which might be caused by the dampness and impurity of the atmosphere, and much practical inconvenience and probably unsightliness in the means that would be necessary to adopt for opening and shutting casements, would be avoided.

That, in order to promote the art of sculpture, and its effective union with painting and architecture, I would propose that in the halls, galleries, and corridors, statues might be employed for the purpose of dividing the paintings on the walls. By this arrangement a rich effect of perspective and a due subordination of the several Arts to each other, would be obtained. The statues suggested should, in my opinion, be of marble, of the colour of polished alabaster, and be raised upon lofty and suitable pedestals, placed close to the wall in niches, surmounted by enriched canopies; but the niches should be shallow, so that the statues may be as well seen laterally as in front.

The architectural decorations of these niches might be painted of such colours as will give the best effect to the adjoining paintings, being relieved in parts by positive colour and gilding; and the backs of them might be painted in dark colours, such as chocolate, crimson, or blue, or they might be of gold, for the purpose of giving effect to the statues.

Having thus described the views I entertain as to the character of the decorations of the interior generally, I now proceed to notice in detail the special decorations and arrangements which I would propose for the several halls, galleries, and principal apartments.

## WESTMINSTER-HALL.

I would propose that Westminster-hall, which is 239 feet long, 68 feet wide, and 90 feet high, should be made the depository, as in former times, for all trophies obtained in wars with foreign nations. These trophies might be so arranged above the paintings on the walls and in the roof as to have a very striking and interesting effect.

I would further suggest that pedestals, 20 in number, answering to the position of the principal ribs of the roof, should be placed so as to form a central avenue 30 feet in width from the north entrance door to St. Stephen's porch, for statues of the most celebrated British statesmen whose public services have been commemorated by monuments erected at the public expense, as well as for present and future statesmen whose services may be considered by Parliament to merit a similar tribute to their memories.

The statues (26 in number) which have been already proposed to be placed against the walls between the pictures, I would suggest should be those of naval and military commanders.

The subject of the paintings on the walls, 28 in number, 16 feet in length and 10 feet in height,

might relate to the most splendid warlike achievements of English history, both by sea and land, which, as well as the statues that are proposed to divide them, might be arranged chronologically.

To give due effect to these suggested decorations, it is proposed that the light should be considerably increased by an enlargement of the dormer windows in the roof, by which also that extraordinary and beautiful piece of decorative carpentry of the 14th century may be seen to much greater advantage than has ever yet been the case.

This noble hall, certainly the most splendid of its style in the world, thus decorated by the union of painting, sculpture, and architecture, and aided by the arts of decoration as suggested, it is presumed would present a most striking appearance, and be an object of great national interest.

#### ST. STEPHEN'S HALL.

I would suggest that this hall, which will be 90 feet long, 30 feet wide, and 50 feet high, and have a stone-groined ceiling, should be appropriated to the reception of paintings commemorative of great domestic events in British history, and statues of celebrated statesmen of past, present, and future times. The paintings may be 10 in number, 15 feet long, and 10 feet high, and 12 statues would be required as a frame to them. In the upper part of the hall, 30 niches will be provided for statues of eminent men of the naval, military, and civil services of the country.

#### THE CENTRAL HALL.

This hall will be an octagon of 60 feet in diameter and 50 feet high, covered with a groined ceiling in stone. As each side will be wholly occupied by windows and arched openings of access, paintings cannot form any part of its decoration. It may, however, with good effect, be extensively decorated with sculpture. In the centre of the pavement might be placed a statue of her present most gracious Majesty, upon a rich pedestal of British marble, highly polished, and relieved in parts by gold and colour. The niches in the walls and screens might be filled with statues of her Majesty's ancestors, in chronological order, even up to the period of the Heptarchy. In front of the eight clustered pillars in the angles of the hall might be placed, with good effect, seated statues of some of the great lawgivers of antiquity.

#### THE VICTORIA GALLERY.

This gallery will be 130 feet long, 45 feet wide, and 50 feet high, with a flat ceiling, and will admit of both paintings and sculpture. The subjects of the paintings on the walls, 16 in number, which may be 12 feet long and 10 feet high, might relate to some of the most remarkable royal pageants of British history, or other appropriate subjects. Statues of her present most gracious Majesty might fill the central niches at the ends of the hall; and the other niches, as well as the pedestals between the paintings, might be occupied by statues of her Majesty's ancestors. These statues might, with good effect, be of bronze, either partially or wholly gilt.

#### CORRIDORS OF ACCESS THROUGHOUT THE BUILDING.

The principal corridors of access to the various apartments of the building will be 12 feet wide, their ceilings will be flat, and they will generally be lighted from windows near the ceiling. Their walls might be decorated with portraits as well as with paintings, illustrative of some of the most remarkable events in the history of the country, or in the lives of its most eminent personages. For this purpose about 2600 feet in length of wall, by a height of about 7 feet, may be appropriated on the principal floor; 900 feet in length, by a height of about 7 feet, on the one-pair floor; and about 400 feet, by the same height, on the two pair floor. These paintings may be divided into subjects at pleasure, by margins or borders of architectonic decoration, in accordance with the style of the building.

#### THE HOUSE OF LORDS.

This house will be 93 feet long, 45 feet wide, and 50 feet high, and will have a flat ceiling in panels. As the fittings for the accommodation required for the business of the house, together with the windows which are necessary for duly lighting it, leave little space of plain wall, paintings cannot, with good effect, form any part of its decoration. Niches, however, will be provided, which might be filled with statues of royal personages. The architectural details of the ceiling may be enriched

and relieved with gold and colour, and the windows filled with stained glass, as before described. The whole of the fittings are proposed to be of oak, with appropriate carvings. The throne will be highly enriched and relieved by colour and gilding, and the back lined with cloth of gold, containing the royal arms emblazoned in their proper colours.

#### THE HOUSE OF COMMONS.

This house will be 83 feet long, 46 feet wide, and 50 feet high, and will have a flat ceiling. It is proposed to be finished in the same style as the House of Lords, but with less enrichment, and less of colour and gold in its decorations. The nature of its design, and the extent of the fittings for the accommodation required, will not admit of the aid of either painting or sculpture.

#### THE QUEEN'S ROBING ROOM.

This room will be 38 feet long, 35 feet wide, and 20 feet high, and have a flat ceiling in panels, richly moulded and carved, and relieved with gold and colour. The ground of the panels of the ceiling is proposed to be of gold, covered with a diaper enrichment, and blended with legends, genealogical devices, badges, cognizances, and other heraldic insignia, &c., in colour.

The wall-fittings of the room are proposed to be of oak, richly carved and moulded, and enriched with heraldic and other decorations in positive colour, relieved with gold. Compartments will be formed in the wall-framing, which might be filled with paintings referring to events in British history in which the sovereign has personally taken a conspicuous part, or with other appropriate subjects.

#### THE ANTI-ROOM OR GUARD-ROOM.

This room, which adjoins the Queen's robing-room, will be 38 feet by 38 feet, and 20 feet high. The ceiling will be of oak, with characteristic decorations. Oak framing 8 feet high, with heraldic decorations, and a seat at the foot of it, will line the room. The walls are proposed to be covered with representations of battle scenes and pageants of English history, in which an opportunity will be afforded of displaying the warlike costumes of its several periods.

#### THE CONFERENCE-HALL.

This hall, which is in the centre of the front towards the river, will be 54 feet long, 28 feet wide, and 20 feet high, and will have a flat ceiling. The walls are proposed to be lined with oak framing to a height of about six feet, above which they may be covered with paintings representing celebrated state trials, and extraordinary sittings of Parliament, conferences, &c.

#### AS TO THE APARTMENTS APPROPRIATED TO THE PRIVATE AND PUBLIC USES OF EACH HOUSE.

These rooms consist of libraries, refreshment-rooms, robing-rooms, state officers' rooms, and committee-rooms.

Nine rooms are appropriated to libraries, six of which are 50 feet long and 28 feet wide; two are 33 feet long and 28 feet wide; and one is 32 feet long and 23 feet wide. The refreshment rooms are four in number, of which one is 60 feet long and 18 wide; two are 28 feet long and 18 feet wide; and one is 34 feet long and 18 feet wide. The robing-rooms for the archbishops and bishops are three in number, of the respective sizes of 30 feet by 20 feet, 20 feet square and 16 feet square. The robing and other rooms for state officers are 17 in number, averaging in size about 24 feet by 18 feet. The committee-rooms are 35 in number: on the principal floor, five of them will be 37 feet long by 28 feet wide; two 35 feet by 26 feet; and one, 32 feet by 23 feet. On the one-pair-floor, two will be 42 feet long and 33 feet wide; one, 54 feet by 28 feet; four, 36 feet by 28 feet; ten, 34 feet by 28 feet; and two, 34 feet by 22 feet; and, on the two-pair floor the number will be eight, averaging in size 28 feet by 20 feet. The whole of these rooms are about 20 feet in height, with the exception of those on the two-pair floor, which will be about 14 feet high, and will be lighted by windows of the usual height from the floor.

The ceilings will be flat, and formed into panels by moulded and carved ribs, relieved by characteristic and suitable carvings.

The floors are to be of oak, with borders and inlays.

The fireplaces and door-jambs are proposed to be of British marbles, highly polished. The doors, frontispieces, linings of walls, and fittings, will also be of oak. In some of the rooms it is proposed

that the wall-framing should be carried to the height of 6 or 8 feet, in others that it should be of the full height of the room, and with panels for paintings, portraits, &c.

The plain surfaces of the walls might be covered with paintings of historical events, and the panels in the wainscoting might contain portraits of celebrated personages in British history.

The architectural details, both in stone and plaster, might be painted in positive colours, occasionally relieved by gilding; and the armorial bearings, badges, and other heraldic insignia, which will enrich the wood-framing, might also be relieved with gold and colour.

#### THE SPEAKER'S RESIDENCE.

This residence being designed for state purposes, might also be adorned with paintings. The style of its finishings, fittings, and decorations will be in accordance with the best examples of the Tudor period.

Its principal rooms for purposes of state are as follows:—A reception-room, 34 feet by 23 feet; a library, 34 feet by 23 feet; a dining-room, 45 feet by 24 feet; a drawing-room, 38 feet by 22 feet; and a corridor of communication, 8 feet wide, surrounding an internal court.

With respect to any further encouragement of the Fine Arts in the exterior of the building, I am not aware of any opportunities that offer, as arrangements have already been made for all the architectonic or conventional sculpture that will be required to adorn the several elevations. Equestrian statues of sovereigns in bronze might, however, be placed, with considerable effect, in the proposed quadrangle of New Palace-yard, the Speaker's quadrangle, and the royal court.

I have now described, in general terms, the whole of those portions of the building that might I think, with propriety and effect, be adorned with works of Art and the arts of decoration; but, in making the several suggestions which have occurred to me, I should wish it to be understood, that I have merely stated my own views on the subject, as far as I have hitherto been able to consider it in its general bearings, and with a view to show how the objects for which the commission has been established may, if desired, be carried out in the decorations of the new building to their greatest extent. I should not, however, wish to be strictly confined in all cases to the adoption even of my own suggestions, as, upon a more mature consideration of the subject in detail hereafter, when the shell of the building is completed, I may be induced to vary and modify some of the views which I entertain at present, and which, I fear, I have but imperfectly communicated in this paper.

#### AS TO THE COMPLETION OF THE EXTERIOR.

It has ever been considered by me a great defect in my design for the new Houses of Parliament that it does not comprise a front of sufficient length towards the Abbey, particularly as the building will, perhaps, be better and more generally seen on that side than upon any other. This was impossible, owing to the broken outline of the site with which I had to deal. I propose, therefore, that an addition should be made to the building (which upon the accompanied plan is coloured orange), for the purpose of enclosing New Palace-yard, and thus of obtaining the desired front. This addition would be in accordance with the plan of the ancient palace of Westminster, in which the hall was formerly placed in a quadrangle, where, in consequence of its low level, it must have been seen and approached, as it would ever be under such circumstances, to the best advantage. The proposed addition would, in my opinion, be of considerable importance as regards the increased accommodation and convenience that it would afford in addition to what is already provided for in the new building, as hitherto proposed.

It has long been a subject of serious complaint and reproach, that the present law courts are most inconveniently restricted in their arrangements and accommodation. If it should be determined to retain the courts at Westminster, the proposed addition would admit of the means of removing this cause of complaint; it would also afford accommodation for places of refreshment for the public, for which no provision has been made in the new building; also for Royal commissions and other occasional purposes required by Government, and now hired most inconveniently, in various parts of the town, at a considerable amount of rental; or for

such of the Government offices as may, without inconvenience, be detached from the rest, such as, for instance, the office of Woods, or for a record-office, and chambers or residences for public officers. It will also afford the opportunity of making an imposing principal entrance to the entire edifice, at the angle of Bridge-street and St. Margaret's-street; a feature which is at present required, and which would add considerably not only to the effect of the building, but also to its security in times of public commotion.

Of the several local improvements indicated in the accompanying plan, none in my opinion is of greater and more pressing importance than that which I have to suggest in respect of Westminster-bridge. The anomaly of the size, outline, and character of that bridge, considered as it must ever be from its proximity as an adjunct to the new Houses of Parliament, must have forcibly struck every one who has passed over or under it since the new building has risen into importance; and the steep and dangerous acclivities of the roadway, as well as its want of width for the traffic that passes over it, have constantly been a subject of public complaint.

In order, therefore, to remove these serious objections, I propose that the superstructure of the bridge should be rebuilt upon the old foundations, which are now in course of being repaired and extended under the able superintendence of Messrs. Walker and Burgess. As it is, in my opinion, of the utmost importance, both as regards the effect of the new Houses of Parliament when viewed from the bridge, and the convenience of the public in passing over it, that the roadway should be made on the lowest possible level, I would recommend that the form of the arches of the new bridge should be pointed, by which great facility would be afforded for accomplishing that very important object, namely, by materially reducing the thickness of the crown of the arches within what is considered necessary for arches of the circular form. I am induced also to recommend this form of arch on account of another very important practical advantage which it offers, namely, the elevation of its springing above the level of high water, by which the waterway through the bridge will be the same at all times of tide; whereas at present the span-drills of the arches offer an impediment to the waterway at high water nearly equal to 1-20th of its sectional area, occasion rapid currents, with a considerable fall, and sometimes much danger to craft in passing through the bridge under the influence of high winds. I consider it also of the greatest importance, in an artistic point of view, not only that the bridge should be materially lowered, but that it should be made to accord with the architecture of the new Houses of Parliament, in order that, both in composition as well as style, the *ensemble* should be harmonious and effective. Upon a rough estimate which I have formed of the cost of the new superstructure, I am satisfied it could be erected for about £120,000 beyond the cost which it will be necessary to incur in carrying out Messrs. Walker and Burgess's design for widening the present bridge to the extent proposed.

With the view of illustrating the several suggestions which I have made on this subject, I venture to submit the accompanying design for a new superstructure; but in so doing I wish it to be clearly understood that I have no desire whatever to interfere with the employment of the engineers who are now engaged upon the repair and extension of the foundations of the present bridge; who, having so ably commenced the work, should in my opinion be left to complete it.

I leave this subject, therefore, in the hands of the commissioners, in the hope that they will at their earliest convenience, if they should think fit, make a formal and urgent communication to the Government in accordance with the views which I have now laid before them, particularly as an early decision is of great importance, in order that the works now in hand may not be proceeded with further than is necessary to carry out those views, if they should be ultimately adopted.

Next in importance to the rebuilding of the superstructure of Westminster-bridge, is the formation of the proposed lines of embankment on both sides of the river, from Vauxhall to London-bridge, as suggested by Messrs. Walker and Burgess in their late report on the subject to the Government and the corporation of the city of London.

In the accompanying plan I have shown so much of those lines of embankment as more immediately affect the new Houses of Parliament and their locality. As there would doubtless be serious objections to a public road upon the embankment on the north side of the river, I confine my observations to the southern side, where, if a road could be obtained, it would afford a succession of fine views of London, and the best situation for views of the principal front of the new Houses of Parliament. Having maturely considered the subject, I think it would be practicable to obtain a public road of ample width, upon arches, from the termini of the South-Eastern and Dover and the Brighton Railroads, at the foot of London-bridge, to the terminus of the South-Western Railway at Vauxhall.

The road might be raised upon arches to a level that would coincide with the levels of the roadways of the several bridges which it would intersect, by which means the waterside frontages of the several wharfs need not be interfered with in any material degree; indeed, the extent of such frontages might, by the means of docks of convenient form and size, be very considerably increased, and the archways might to a great extent be appropriated, if desired, to warehouses and other purposes of trade. By extending the archways to a sufficient depth to the south of this road, a frontage for building might also be obtained, particularly opposite Privy-gardens and the new Houses of Parliament, where, if the houses were designed in masses, with reference to architectural effect, they would form an agreeable and striking view from the north side of the river, and effectually screen the present low and mean display of unpicturesque buildings on the Surrey side. The proposed houses, from being raised to a considerable elevation, would have a fine command of the river and the principal public buildings of the metropolis, and having, in addition to these advantages, a southern aspect, would form very agreeable residences, such as would probably be eagerly sought for by the owners of adjoining wharfs, either for their own occupation or that of their principal agents. Taking into consideration the increase of private accommodation to the several wharfs, and the value of the new building-frontage, the proposed work would probably yield a very considerable return for the capital expended upon it; and, when effected, would not only form one of the most striking improvements of an ornamental character of which the metropolis is susceptible, but would materially conduce to the convenience, the comfort, and recreation of the public. It would also, perhaps, render unnecessary the line of road that has been projected from the termini of the railroads at the foot of London-bridge through Southwark to the foot of Westminster-bridge, for the convenience of the west-end of the town; as the distance to that part of London would be materially shortened by taking the proposed embankment road, and passing over Waterloo-bridge.

The other local improvements indicated in the accompanying plan relate to an enlargement of the spaces immediately contiguous to the new Houses of Parliament, and an improvement of the approaches.

Old Palace-yard is proposed to be considerably increased in size by the demolition of the houses which now occupy that site, as well as the houses on both sides of Abingdon-street, by which means a fine area for the convenience of state processions, and the carriages of peers and others attending the House of Lords, as well as a spacious landing-place adjoining the river, would be obtained. The Victoria Tower, as well as the south and west fronts of the building, would thus be displayed to the best advantage. The Chapter-house would be laid open to public view, and, if restored, would form a striking feature in conjunction with the Abbey; and a considerable extent of new building frontage that would be obtained by this alteration, might be occupied by houses of importance in a style of architecture in harmony with the Abbey and new Houses of Parliament, by which a grand and imposing effect as a whole would be produced. As one means of improving the approaches, I propose that the noble width of street at Whitehall should be extended southwards, by the removal of the houses between Parliament-street and King-street, by which the Abbey would be wholly exposed to view as far as Whitehall Chapel. The houses on the north side

of King-street should be removed for the purpose of substituting houses or public buildings, if required, of an imposing style of architecture. Millbank-street is proposed to be widened and improved, in order to make it a convenient and effective approach from Millbank-road to the Victoria Tower and Old Palace-yard. Tothill-street is also proposed to be widened and improved, in order that it may be made an equally convenient and striking approach to the Abbey, the Houses of Parliament, and Whitehall, from the west end of the town. St. Margaret's Church, if suffered to remain in its present position, should be improved in its external decoration, in order that it may not disgrace, as it now does, the noble pile of the Abbey which rises above it.

I have thus enumerated all the principal improvements which I should wish to see effected in the locality of the great work on which I am engaged; and, although I have thought it right thus to place on record my views upon the subject, I am aware that a considerable time must elapse before they could all be effected, if approved.

I trust, however, I may hope to see accomplished, at no distant period, the rebuilding of the superstructure of Westminster-bridge, the embankments of the river, the enclosure of New Palace-yard, and the enlargement of Old Palace-yard; which, in my estimation, are improvements of the utmost importance, whether as regards the beauty of the metropolis, the effect of the new Houses of Parliament, or the convenience, as well as the enjoyment, of the public.

I have the honour to be, with the greatest respect,

Your Royal Highness's

Most obedient and humble servant,

CHARLES BARRY.

Although, in republishing this clear and valuable document, some repetition has been inevitable—for we had previously printed portions of the plan—we have not ventured to abridge it. It will be read with deep attention by all artists, and with scarcely less interest by the public generally; for, unquestionably, we have had no structure in modern times concerning which "the Nation" feels so intense an anxiety.

The letter of Mr. Barry is so long, and, moreover, the "Report" reached us at so late a period of the month, that we are unable to do more than refer to the other contents of the "Appendix." Nor is it, indeed, very necessary to do more, inasmuch as any artist may procure a copy of the Report, by sending for it to Messrs. Hansard, printers to the Houses of Parliament, Great Turnstile, Holborn. The cost of the document, of seventy-two closely-printed folio pages, being no more than thirteen pence; no artist, therefore, may be excused for being without it. Next month we shall examine the several articles which follow Mr. Barry's letter; meanwhile, we must be content merely to name them.

1st, is a Report of the Committee "to whom was referred the duty of making investigations respecting the ancient states and modes of permanent or temporary decoration of Westminster Hall, and respecting the dates and extent of its architectural alterations"—a brief but curious document.

2nd, "Mr. Wilson's Report."\* This document extends to 28 pages; it is illustrated by explanatory wood-cuts—"contrivances for scaffolding, &c. &c., contains short descriptions of paintings in fresco by different masters"—the "time occupied by some of them in producing their great works, the 'mortar' they used; &c. &c. Every line of this valuable paper should be read with deep attention.

3rd, An essay, by Mr. Eastlake, on the "means of preventing damp in walls."

4th, "Communications from C. H. Smith, Esq., in reply to questions proposed to him respecting causes and means of preventing appearance of salt-petre on surface of walls."

5th, "Styles and methods of painting suited to decoration of public buildings," by Mr. Eastlake. A document of some length, exhibiting great learning, industry, and labour.

\* C. H. Wilson, Esq., Director of the Government School of Design, was, in the course of the last year, employed by her Majesty's Commissioners on the Fine Arts, to proceed to the Continent, to collect information relating to the objects of the commission.

## THE NOMENCLATURE OF PICTORIAL ART.

## PART II.—CLEARNESS

THE quality of clearness at its maximum results from the coincidence of a full harmony of colour in very moderate force; aerial perspective; a frequent alternation of the transparent, semi-transparent, and opaque media; distinct detail, and bold chiaroscuro.

Colour, though a chief power in the production of clearness, is only so when in the hands of a consummate chromaticist; as, injudiciously or ignorantly applied, it may be made to completely mar what of this quality could be produced without it. White and black, for instance, are capable of great clearness when accompanied by a quickly alternating transparency and opacity; witness engravings, particularly those of some of the old masters, previously to the introduction of etching. Could any technical quality be estimated by its difficulty of achievement, clearness would certainly stand at the head of all pictorial beauties; as the term itself, applied to a painting, implies the greatest eulogy that can be applied to a work as to its technical excellence.

Impalpable in itself, it should pervade every part while destroying all idea of the surface of a work; and so absorbing, when attained, is the full sense of its influence, that the minor and precise beauties of the finished schools vanish and become dry and opaque when brought in contact with the pure effulgence of this vital quality. Pictures without it have an unpleasant and opaque palpableness, and seem really to form part of the useless furniture of a room; while those which possess it in any extraordinary degree present for the refreshment of the eye so many delicious apertures of more than mimic light and air and sunniness, which glow without heating and shine without dazzling, and, like the face of health and youth and beauty, shed a warmth around them whose brilliancy neglect cannot entirely deface; while all the varnish and amendments of the picture-dealer, added to all the wash-leather rubbings of all the curators of public and private collections in existence, must still leave those which have it not, as at first—dry, lifeless, and repulsive.

Lightness and height of tone do not produce it; nor do, necessarily, darkness and depth of tone destroy it.

Light under improper management becomes dry and opaque; while dark, in knowing hands, may be made productive of a liquid transparency and clearness sufficient to throw into shade all the misapplied resources of a brilliant white and a high key of colour.

A conviction of this truth gave rise to the often quoted and silly wish of some one who has said somewhere, "I wish that white were a guinea an ounce, we should then have better painters." But but without treating this with more consideration than is due to a brilliant sally somewhat slightly allied to truth, and chiefly directed against a class of dry and opaque colourists, in whose works too great a display of the illusive glories of whitelead might have been apparent, and without wishing to rebel against the authorities in Art, it is ridiculous to imagine that any partial prohibition by price of any particular pigment could go very far in producing good colourists, or in amending bad ones. If any good could by possibility follow an adjustment of the prices of colours, it would most likely be best attained by a perfect equalisation of the prices of every pigment in use. For could the price of a colour regulate its use, the transparent and opaque would then enter a work in equal proportions, allowing a fair chance of the best possible results. I say a chance only, for, after all the care and solicitude in the preparation and supply of the palette, and there are some required, it is not the colours we may get on a palette, but the way in which they get on a canvas, that makes the picture. As an illustration of the beauty in question perhaps, amongst landscapes, it is impossible to find a finer example in this country, and accessible to all parties, than the 'Embarcation of S. Ursula,' of the National Gallery, by Claude; amongst the pictures of familiar life, those of *Dahonghe* when pure; and in history painting than the 'Venus and Mercury instructing Cupid,' by Correggio; also in the National Gallery.

From an examination of the many fine pictures dispersed through the private galleries of this

country, besides the few in our National Gallery, with reference to clearness, it would appear that the comparative absence, rather than pureness or fulness, of colour produces this enviable quality.

Analogy will assist us in arriving at this conclusion. Water and crystal have their clearness deteriorated by the presence of colour, and the deterioration increases in an exact ratio with the amount of colour admitted. The brightest wine, for instance, is less clear than pure spirit; and the topaz, garnet, and amethyst, amongst gems, yield in clearness to the diamond.

Painting, deriving its resources from objects all more or less coloured, cannot of course, discard colour; and its business necessarily consists in arranging the juxtaposition and contact of colours, tints, and tones, in the manner best calculated to realize some desired effect, in which clearness would appear to be a principal technical desideratum.

A good general harmony of colour, on a broad scale, will produce much of clearness, which may be increased to an almost indefinite extent, by the observance of some further pictorial contrivances, all derived from a close observance of nature under her most favourable appearances, which appearances may be said to be the only legitimate states proper for imitation; and the accomplished painter, whether of history, poetry, familiar life, or landscape, in rejecting nine-tenths of what promiscuously presents itself to him, is not the less, but the more natural than the one who, on the contrary, paints anything which comes before him, and calls it natural, because he happens to find it in nature.

This subject of proper and pictorial, and improper and unpictorial selection, has been treated by more able hands than my own; therefore, to the main question again. Clearness is augmented in a work already under a good general harmony of colour, by breaking down the colours and their tints into tones. The larger the masses and objects may be, the more imperative is the demand for this treatment; and the smaller the masses and objects may be, the less breaking is required: inasmuch, that objects may, from their smallness and number, alternate so rapidly, as to furnish the desired clearness of themselves, by an attention only to general truth and harmonious arrangement.

Let us take, as an object in nature requiring the greatest extent of this contrivance, an Italian blue sky: one very seldom represented naturally, and, consequently, very generally railed against as one of those things which, looking glorious in nature, refuse a satisfactory transfer to canvas. What is the mode usually adopted to represent this glorious and blue profound, this eternal depth of a measureless space? A palette is set with four or five tints of ultramarine, all solid, and of course opaque. A gradation is then made in this repulsive state of so transcendent a pigment, from the zenith to the horizon, and completed with the badger hair tool or sweetener, which completes the ruin of that which was so injudiciously commenced. What result can be expected from this treatment other than the one generally realized? A wall could not be made to look more solid, though covered with the same colour, by the best house-painter in the most "workmanlike manner."

A question very naturally arises here: why does not a blue wall, executed by a house decorator, present only somewhat the appearance of a blue sky? The proper and only answer is obvious: it is not broken as in nature or Fine Art; and would require an artist instead of a house-painter to execute. But once done, the colour of a blue room, instead of pressing disagreeably on the eye, would retire, give space, and refresh rather than repulse vision. Some judiciously arranged blue papers, coloured transparently instead of opaque, and interlaced with an opaque citrine or russet-tinted figure, present this agreeable appearance. A sky painted in the above imperfect mode, may be improved by lacing into it, with an open hog-hair tool, a tint of citrine or russet, in the same gradation with the blue. But unless the first mass be laid in with a vehicle sufficiently tenacious to resist mixture, there is some danger of soiling rather than clearing the blue, and of producing a lower tone than required.\* The lighter the breaking tint be in any tone, the more lustrous will be the effect produced; and the darker, the more subdued, yet clear.

Another, easier and more effective, while truer,

\* Vide Tone and Tint.

mode, is to lay a graduated ground of citrine or russet—those being the distant relative harmonies of blue amongst the tertiaries—and when dry paint the blue sky upon it in a full body of colour, and with rather open or even coarse tools, so that all the interstices caused by driving the blue over the canvas may present the only proper harmony to blue, and convert the tint into a tone.

The more transparent and retiring the sky may be required, the darker must be the blue and the lighter the ground, as when the two tints associate in depth, clearness and transparency in a great measure cease, and can only be recovered with much trouble. Other modes, conducing to the same end, may be adopted, which a painter's own peculiarity of manner and taste may suggest.

I have seen some excellent blue skies, by the Dutch masters, resulting entirely from the interstitial appearance of the varnished oak panel breaking through the blue. Blue then, in order to appear clear and become a tone, requires to alternate with citrine or russet; red, with olive or citrine; and yellow, with olive or russet: their several distant relatives in the tertiaries, and not with their opposites, orange, green, and purple.

The reason for this is, that those distant relatives have in their mixtures 25 per cent. only of the key colour; while the near relatives

of . . . . . Blue . . . . . Red . . . . . Yellow,  
which are amongst  
the tertiaries. . . . . Olive . . . . . Russet . . . . . Citrine,

have in their mixtures 50 per cent. or two-fourths of the key colour, which would relate too closely and produce dulness.

Another mode of giving lustre, transparency, and clearness to blue, particularly in skies and distant objects—though accompanied with more difficulty in the management—is, first to paint the passage entirely in citrine, somewhat lighter than the depth ultimately required in the blue, barely indicating the broader detail, and using some vehicle which will have set tolerably firm, though not dry, by the time this process be completed. The necessary tenacity of the vehicle may be best adjusted by the presence of a varnish, increasing the quantity of varnish in proportion to the smallness, and adding oil in proportion to the largeness, of the object or passage to be painted.

If the ground thus laid shall not be sufficiently set, further operations should be deferred until it assume a state which will refuse mixture, or at least perfect mixture, with any colour that it may be subsequently necessary to brush into it, at which time the whole passage should be completed with its proper blue. By this mode a full and firm mass of colour can be brought on the canvas, and while it vies with all the delicacy and complexity of tone usually attempted, and too frequently missed by other modes, it has the charm and advantage of that full body and clear aerial quality which so peculiarly mark the finest skies of Claude in his best time, of Cuyp, and occasionally of our own Richard Wilson. It is not an unfrequent remark of painters, and particularly as regards skies, that if they do not happen to furnish one at the first painting, the second attempt is sure to ruin it, and deprive it of a certain aerial and fresh character, which never occurs again in after paintings. The remark is no less frequent than true, and the causes are obvious enough; for as it is no more possible for an artist to completely obliterate a canvas at one painting, than for a house-painter to cover a wall with one coat of colour, the consequent interstitial appearance of the ground of the canvas will produce a comparative clearness. A second painting fills up the interstices, produces a solid tint, or series of tints; and the aerial character of the first painting vanishes, leaving an appearance more allied to wood, or stone, or cloth, than air; and originating the sarcastical term, "a cassimere sky," so frequent in portraits.

White, when necessary to be introduced in any large quantity—such as a large piece of drapery, building, or sky—presents some difficulties, in order to render it clear and pleasant to the eye. The difficulty increases with its remove from absolute purity, in an exact ratio with the depth required. Many painters shrink from introducing it near, or surrounding flesh, from the fear of its making the flesh appear dull and dirty. And in an endeavour to remedy this, by lowering the tone of the white, in nine instances out of ten the white becomes dirty itself, which, vulgarly speaking, is one of those dilemmas of "Out of the frying-pan

into the fire," so frequent with beginners in every art. Now, if flesh be painted with that full amount of clearness, of which, it may be said to be more susceptible than any thing else, within the range of objects more generally painted than others, there is no power of colour capable of dimming its inherent pictorial lustre; and white, if it disagree or dissociate with it, must be on the score of chiaroscuro, and not from its clearness. To lower the tone of white without a loss, but rather with an addition to its clearness, it is only necessary to break it down intersticially with the common relative harmony to blue—citrine.—If this be done well, independently of the natural light and shade and reflect, any amount of reduction in its lightness may be easily managed without loss of clearness. If white be reduced on the palette to light middle tint, with cold grey, not blue, and when applied to the canvas, rapidly and distinctly alternated with citrine of a lighter tint than the reduced white, where practicable; a tone may be produced of infinite beauty, though of ever so low a character. This may be proved temporarily by scraping down an old roughly painted piece of white. Age and the soil produced by the extra determination to the surface of the celine of oil will have rendered the original white of a dull citrine tint; and scraping down the eminences of the rough surface to the original pure white, will produce a tone composed of quickly alternating tints of pure white and citrine. The complicated and clear tone thus produced makes any addition to, or alteration in, it a matter of extreme difficulty; which circumstance of itself proves, if any such proof be required, that clearness cannot result from a solid tint. What makes citrine or russet the proper colours for this purpose is, that they are the distant relatives of blue; and blue reciprocating with white in being colder than the other colours, they both have the same common harmonies. Thus white and blue have their clearness augmented when receiving warm instead of cold reflects.

Citrine being the tertiary yellow and russet the tertiary red, breaking with citrine produces more light and beauty, and with red more depth and grandeur; allowing a power of diversifying the expression and character of colour, of essential value to the consummate chromaticist.

Some explanation is necessary here, in order that, in opposing what has been considered chromatic doctrine, I may not be charged with advancing that which may be interpreted chromatic dogma. Up to the present time it has been insisted on by nearly all writers on chromatic art, that the true harmony to any given colour is its equivalent or opponent, thus, starting with

the three primaries, Yellow... Red... Blue, that they would find their harmonies in

their opposites .. Purple... Green... Orange, called opposites or equivalents, because composed of the two remaining primaries, and named secondaries, as being the first remove from the three simple colours. Now, the terms themselves imply a distinct contradiction to the attributed result, *harmony*. That a colour can be harmonized by contact with its antagonist, is difficult to conceive, if not impossible in practice. The great colourists—in their best works—have given us no instance of it, and when detected in their earlier ones it has been universally objected to. Such are the well-known and generally reprobated oppositions in the famous 'Bacchus and Ariadne,' of Titian (National Gallery).

The only circumstance out of which has been wrenched a sanction for this absurd opinion and still more absurd practice, is an exaggerated description of some phenomena evolved from the display of the primary colours, excited to great brilliancy by means of light and occasionally augmented by contact with dark. These phenomena, again, are not very distinctly perceivable but by extremely sensitive, weak, or diseased organs of vision; and a healthy and vigorous eye is as little susceptible to the impression of these phenomena—to the extent combated for—as a perfectly healthy body is to the influence of animal magnetism. The promoters of this opinion advance, that an eye suddenly taken off a spot of strong red and immediately directed to a space of grey, perceives a number of green spectra of a similar form to the red spot. The error lies in naming the evolved spectra green, as they will be found upon close examination by healthy organs, to contain no

greater quantity of the colours composing green than exist in the tertiary state of colour, say olive, or olive slightly inclining to citrine; and so on with the other colours, a closer inquiry into which will more properly come under the article on Harmony. But the breaking down, clearing, and toning of colour being necessarily conducted upon a system—if not identical with, yet—closely analogous to that of harmony, it has thus far naturally crept into the present subject.

I have thought it would be desirable to allude to some instances in which this quality of broken colour is most eminently conspicuous, and that it would be still more desirable, for the sake of immediate and easy reference, if such instances be limited to the pictures of our National Gallery. The instance then the most prominent of any I can at once bring to memory, occurs in the petasus or winged cap of Mercury, in Correggio's 'Venus and Mercury teaching Cupid.'

The knee and leg also of Mercury, which are redder than the flesh of the two other figures, are most admirably managed in this respect; but the breaking colour will not be found to approach green. The talaria, or winged sandals of the feet, again, present as fine an instance of this complicated and broken treatment as can be referred to.

It will be found that the farther pictures are intended to be placed from the spectator, the stronger and more distinct will be required those breaking colours; and nothing but this circumstance could warrant the extreme opposition of some of the tints used for this purpose by Rubens.

The pictures of West, and particularly the 'Healing the Sick,' in the National Gallery, may be usefully referred to for the total absence of this quality; from which, rather than the general arrangement, has resulted its extremely repulsive colour.

The portrait of this painter, by Lawrence, in the same room, may be said to vie with the pictures of West in the total absence of tone and clearness, and resulting from the same deficiencies.

Much more may be added to this interesting subject—but for exceeding the contemplated limit of these articles—such as the proper breaking or harmonizing colours for the secondaries, which follow the same system as the primaries, and may be found in those tertiaries having in them 25 per cent., or one quarter of each colour forming the secondary; thus, the harmony to purple would be citrine, as it contains one of blue, one of red, and two of yellow, &c. &c.

J. B. PYNZ.

#### THE TRAVELLERS' CLUBHOUSE. INTERIOR DECORATION.

THE interior of this clubhouse has, it seems, just been completely redecorated at very considerable expense, but in such manner that the taste displayed in it has been animadverted upon most severely in the *Athenæum*. Whether the architect was consulted upon the occasion, as we think he ought to have been, is not said; but if not, although it must be mortifying to him to find that a favourite work of his, and one which mainly helped to establish his reputation, had been sadly "pawed over" by incompetent persons; it must, at the same time, be consolatory to him to be able to clear himself from the charge of having advised the mischief which has been committed. The mischief itself, however, is not irremediable, nor of a very permanent kind, it being merely the work of the brush, and capable of being again effaced by the brush whenever repainting shall become necessary. As regards the architecture, more irreparable mischief was committed by Mr. Barry himself when he erected, no doubt very reluctantly, the excrescence on the roof of the south or garden front, thereby sadly marring what is decidedly the more beautiful elevation, and which was so perfect, so completely finished up, and such an exquisite bijou, that to touch it at all was almost a sacrilege, even on the part of its own architect. Its charming simplicity is in a manner destroyed; and not only is the addition evidently an after thought, but a *mal-a-propos* one also; for though it may be in reality a lantern, it has the appearance of being a belvedere, confined between buildings that rise above it on each side. However, it is fortunate that the original design is preserved intact in the beautiful architectural illustrations of that clubhouse.

Internally, the architecture itself does not appear

to have been pulled about at all, or to have undergone other change than that of colouring; and if errors more or less serious have been committed in regard to it, it is not greatly to be wondered at, since colouring has never been studied according to any distinct principles; architects themselves have scarcely given the subject any attention, but have regarded it as one not coming within their proper province. We have heard some professional men speak as if they would deprecate colour altogether in architecture, even internally. Beauty of form, say they, should be the architect's chief care: no doubt, but it does not therefore follow that it should be his *sole* one also. As soon as you begin to introduce colour, they tell you, there is very great danger of falling into the frivolous and the meretricious: and again, no doubt such is the case, but that only proves the difficulty, not the undesirability of the thing. And hitherto architects have almost invariably contented themselves with evading the difficulty, leaving colour to be supplied by others, *à discretion*, either painted on the walls, or as silk or paper hangings; and accordingly as individual fancy shall will, or the general fancy—the fashion of the day, shall dictate—which last certainly saves a world of trouble and perplexity, deciding for you that all your rooms shall be universal white and gold, or crimson velvet, or whatever else may be the colours hoisted by fashion.

It is only when he employs coloured materials the architect seems to be aware that something depends on colour; yet in such case he has little choice, but must take his colours just as they offer themselves. Marble columns either exceedingly beautiful in themselves, or prized for their rarity, may nevertheless not be the most suitable for the actual occasion, being either much too light or too dark in tone, or too harshly contrasting in hue, to be in perfect artistic accordance with the rest, unless the colours there introduced are studiously accommodated to those of the more valuable material, which do not admit of any change being made in them.

The truth is, we have neither any established rules nor express law to guide us in matters of this kind, but are left to proceed empirically, according to the best of our tact or instinct. It might not be difficult to point out from what has actually been done, instances that would seem strongly to favour certain arrangements of colours in internal architectural decoration as the very best, and as worthy of being adopted as a standard. Yet, however convenient in itself, such standard might be found very insufficient on many occasions, and at variance with many instances of decoration and colour admirable in themselves, but which, if tested by such standard, must be pronounced heteroclit and anomalous. In nature we observe the very same landscape to vary its aspect, and assume at times a character almost opposite to its usual one, in consequence of some peculiar accident or effect, and be equally or even still more beautiful than when viewed in its every day beauty. Why may it not be more or less the same with regard to interior decoration? Why may not these, also, very different modes of treatment, and very different effects, be nearly equally good in themselves, though for nearly opposite reasons? Experiment might do much more towards elucidating this very difficult point in interior architectural composition than all the arguing upon it that has ever taken place. Nor would it be difficult to obtain something more than mere conjecture to go upon, by having a set of drawings made of the same interior, all differently coloured, in order to judge how far general character is modified or influenced by colour, according to various combinations of it, irrespective of other circumstances. By this means something might be ascertained that would help us forward towards some sort of systematized view of the subject.

At present it seems to be quite vague, arbitrary, and uncertain. Take, for instance, one point, in regard to which very opposite opinions are entertained:—How far should the colour or degree of colour in a ceiling determine or be determined by those of the walls and floor? How far ought the ceiling and floor to harmonise or contrast with each other? If the latter be light—a stone or marble pavement—can colour, at least any positive colour, be properly introduced into the other; or, *vice versa*, is a rich party-coloured carpet suitable for a room whose ceiling is white, or nearly so, and perhaps quite plain also? Of course we mean what are the philosophical principles, if any there

be, which should regulate such matters? for in general, if people can get fine carpets, they lay them down, without caring a fig about either principles or philosophy. And what say the philosophers themselves? Do they quite agree? Hardly so. While the writer in the *Athenæum* tells us that the ceiling and upper part of the walls ought to be lighter than the rest of an interior, Mr. Poynter is enraptured with the heavy painted ceilings once in vogue, and not to be examined without breaking your neck, or else lying supine on a sofa for the purpose. A decorated ceiling is one thing, but a direct 'picture ceiling' is another, and, in our opinion, in excessively bad and puerile taste, for it is just like turning a great picture horizontally, with its face downwards, to serve as a lid or covering to a room. Whatever skill, too, may be shown in foreshortening, its effect is quite lost, except the spectator could be confined to a single point of view; whereas, however he may change his situation, he will still behold the same figures, either in front or the contrary, although, being seen from a different point, the reverse ought to take place. Nevertheless, speaking of Verrio's ceiling at Windsor, Mr. Poynter assures us they were in "the noblest style of decoration Art has ever devised."

We might have remarked upon one or two opinions in the *Athenæum* article that appear to us somewhat overstrained and hypercritical, but know not how far they are borne out by the circumstances of the particular case. We are glad, however, to perceive that some attention is now beginning to be paid to the "philosophy" of interior decoration, and its æsthetic principles. In itself it may not be a very momentous matter; some, perhaps, will call it the mere millinery of architecture, and it certainly is not a subject for senates to sit in council upon; still it is not therefore to be despised or neglected. If decoration be worth having, it is worth studying; more especially as the greater the study the less in many cases would be the cost, in proportion to the effect actually produced.

#### INSTITUTE OF THE FINE ARTS.

THE first public attempt to recognise the existence of this "Society" was made at "Willis's great room" on the 5th of August. As far as it went, it was eminently successful; for although, at present, the "Managing Committee" are unable to give to the Institute a character of practical utility, they have clearly and satisfactorily proved that it contains, at all events, the elements of prosperity—that it may be made abundantly useful to individual members of the profession, as well as to the profession at large—and that it may produce very great advantages, as a source of valuable information and wholesome enjoyment. The occasion to which we now make reference was a "CONVERSAZIONE," held with a view of bringing the members together, and, with them, persons presumed to be—if not actually favourable to the establishment of the Institute, at least desirous of ascertaining, first, the practicability of forming it; and next, the probability of its working advantageously, or otherwise, for the Arts.

The meeting was well attended; there were about 250 persons present; of whom, perhaps, 100 were amateurs, the remainder consisting of artists—members, and visitors. Among the latter were five or six members and associates of the Royal Academy, and a letter was read from the President, apologising for unavoidable absence. We do not, at present, design to enter at length into this subject; our object being less to canvass the pretensions and prospects of the Institute, than to report its first public assembling; but we presume, in passing, to express a hope that the new Society will be directly sanctioned and supported by the accession of some members of a body, upon whom chiefly rests the burthen of upholding British Art. The Royal Academy cannot justify a withdrawal on the ground of either law or custom; the case is without precedent; for although—very properly we think—its members are precluded from becoming, or continuing, members of any societies *with like objects*, the "Institute" cannot be classed among them. It may be, and we think will be, a very valuable auxiliary to the Academy; but under no circumstances can it be made to work prejudicially towards it. If the Institute does anything it will do much,—for its vital principle is the disseminating among the profession information concerning a vast

variety of subjects, all of which bear, more or less, upon the grand business of an artist's life. We do not mean to speak disrespectfully when we say that no class of intellectual men have so little general knowledge as artists. Unquestionably this must be attributed chiefly to the fact, that comparatively little intercourse has existed between them; that personal, has not been added to professional, stimulus; that they have worked apart, without mutual encouragement, without being enabled to communicate, or obtain, results of experience; and where instruction was derivable from books, the guide to them was wanting, or they were not accessible. This is a subject upon which we might write a page or two, and yet say no more than we can say in a single sentence: *it is a great evil that artists should so little mix together.* Now that the project is formed, and that it will unquestionably go on, either for success or failure, it would be equally just and wise in some members of the Royal Academy so far linking themselves with it as to aid in giving it a right bias, a safe purpose, and a high character. Very great good may grow out of such a recognition—very great evil may arise out of a refusal to accord it. He is no friend to "the profession" (and certainly none to the Royal Academy) who would strive to increase the distance between its senior and its junior members; between those who have obtained, and those who are candidates for, Academic honours.

Other opportunities will occur for commenting upon the project and prospects of "the Institute." In its present state, however, a few observations may be desirable; possibly they may have weight with those who, living at a distance, are unable to form opinions for themselves, and who place some confidence in ours. We have had our misgivings on the subject, and even now have insufficient evidence to justify an unqualified advocacy of the Society. We believe, however, that it is likely to be—and feel sure that it may be—a very powerful aid to the artist in his arduous and anxious career; removing out of his way a vast number of "stumbling-blocks," obtaining for him large and important facilities, and rendering the acquisition of knowledge comparatively easy. We last month published "the Address of the Council;" it is a somewhat confused document, which explains little and brings nothing to a point. Its preliminary passage, however, is sufficiently explicit:—

"The grand object of the Institute of the Fine Arts is to unite, by intellectual and social means, the interests of artists, and to attempt to establish a free and liberal intercourse between the patrons, the lovers of Art, and its professors."

To achieve this purpose, numbers are absolutely necessary. The Institute at present consists of about 250 members; when it contains 1000 its moves may be of importance; and surely 1000 is a very small proportion upon which to reckon. We must recollect that, including all classes of artists eligible to election into this body, there are in the United Kingdom somewhere about 10,000 who "live by their profession;" while there are at least double as many who, ranking as amateurs, are interested in the prosperity of the establishment.

It is their imperative duty to give this experiment a fair trial: the subscription is small; the interest that may be derived from a guinea is very large. Not only may it be repaid by positive instruction—it will be money well laid out, if merely to purchase a convenient place of meeting, to obtain all the advantages of a CLUB, without the temptation to needless expenditure.

Until the Society has obtained "a local habitation," it is impossible that its power can be tested; and the "habitation" cannot be acquired until justified by a large accession of members. This advantage once secured, other advantages will rapidly follow; such as these:—The appointment of a clever secretary, who will obtain and communicate all particulars relative to provincial exhibitions, receive and "house" works designed for exhibition in London—in fact, perform a thousand duties, large or small, the performance of which now involves much trouble and loss of time to hundreds; the formation of a library for reference (this would be largely augmented by presented works); rooms in which appointments for meetings may be made by persons residing at distances from London; a collection of objects of Art useful to the student; a correspondence with artists and representatives of artistic institutions abroad; a central point where foreign artists may

make acquaintance with the artists of England; honorary appointments of men of science, antiquarians, &c., willing to answer applications of members for information; honorary appointments of barrister and solicitor, who may be consulted by members without incurring the peril of "costs;" the publication of "proceedings" occasionally, and an elaborate annual report; meetings at stated periods, with a view to social intercourse and direct information. We make these suggestions without any pretence to originality; for we know that they and many others have been seriously considered by the Council, and will be as seriously acted upon "AS SOON AS THE FUNDS OF THE INSTITUTE SHALL PERMIT."

We have been led further into the heart of the subject than we designed, and have consequently abridged the space we had intended to devote to the evening of the 5th of August. We have seldom passed one so entirely gratifying—at once so pleasant and so profitable.

The great room was admirably filled—not only with "living models"—men who have achieved distinction in literature and in the several walks of Art. A large collection of admirable and valuable works, ancient and modern, were skillfully and judiciously placed along the walls, upon the tables, and on pedestals. The labour required to have brought so many objects together was considerable; the expense cannot have been small; and the industry exercised in collecting them must have been very great. We shall give a list of them as far as we have been enabled to make it out.

'Bust of Lorenzo de Medici,' in terra cotta, by Michael Angelo, contributed by W. Denny, Esq. Discovered a few years ago in Florence by the Rev. John Sandford. There is a cast of it in the possession of the Society of Arts in Edinburgh, and another in Florence. There has been also a terra cotta copy of it executed by Cellini for the collection of portraits in the Florence Gallery, and it is the best likeness of Lorenzo known. Cellini, president of the Florence Academy, declares that no other hand than Angelo's could have executed this work. The bust engraved for Roscoe's "Life of Lorenzo," and said by him to be the terra cotta bust by Angelo, in the possession of the Marquis de Laponi, of Florence, is not the work of Angelo, nor did the marquis ever represent it to Roscoe as such. The present fortunate possessor of this magnificent work has a letter from the marquis stating this interesting fact, and giving a history of the bust in his possession. This grand work created quite a sensation throughout the evening, and was the admiration of all present. Mr. Eastlake pronounced it to be one of the finest things he had ever seen—a most interesting relic by the greatest artist the world ever produced.

'Salvator Rosa's Sketch Book,' contributed by J. Auldjo, Esq. These eighty-two pages, the remnant of the "Rough Sketch Book" of Salvator Rosa, were found at Naples, in the possession of a family noble but reduced to poverty, having formed a portion of its share in the library, drawings, prints, pictures, and other effects, divided many years ago among the heirs of a deceased relative. Ignorant of its value, the head of the family, a good-natured old man, had given "the book," as a plaything, to his grandchildren, who amused themselves by tracing in ink the outlines of some, and otherwise maltreating most of the sketches; till, by degrees, all, except the few here collected together, were destroyed. In the year 1834 an itinerant print-dealer offered to me for sale the sketch numbered 58.\* At the first glance I was satisfied it was a drawing by Salvator Rosa, and purchased it without hesitation. On examination of the writing upon it I was strengthened in my opinion by its appearing to me to be exactly like that which I had once seen on an undoubted sketch of his at Rome. My judgment was confirmed by several eminent collectors of drawings in Naples. From the remains of the marks of stitching which it then exhibited, and the regular stain round its edges, I concluded that it was the leaf of a book, and immediately set to work to trace, if possible, the source through which it had come into the dealer's hands. This had been by mere chance; and it was a long time before I could get any clue, and at last only succeeded in time to save this small remaining portion from inevitable destruc-

\* For this information we are indebted to the courtesy of Mr. Auldjo.

tion. The old "Principe," their possessor, well remembered "that the book (for book it was), of which they formed part, was perfect when it came into his hands: that it contained between three and four hundred drawings, with many pages of notes; that the uncle, from whom he derived it, prized it much; that he used to say it was by un pittore, un certo Salvatore, but that he, not knowing anything about drawings, never cared for it, and thought there was little harm in giving it to his grandchildren; had he had an idea it was worth anything he would not have done so." This was all I could learn of their history.

An Oil Painting, on copper, to which the following history is attached. Contributed by J. Auldjo, Esq. In the church of the SS. Annunziata, at Florence, is the celebrated fresco of the 'Annunciation,' painted by Bartolommeo dei Fiorentini, about the year 1296, which is held in the greatest veneration, owing to the following legend:—"The painter, at a loss how to make the countenance of the Madonna properly seraphic, fell asleep, it is said, while pondering over his work. On waking soon after, to his great surprise, he found the face so nobly and beautifully finished, in a style he was unable to equal, that he cried out, 'A miracle! a miracle!' And it was immediately concluded that it was the work of a celestial hand. Copies of this fresco have been made by most of the first-rate painters, for private chapels and oratories, and this one (on copper) has suffered much from ill-treatment,† perhaps from fire, as it is supposed to have been stolen, and probably received its first injury during the revolution of 1779 at Naples, when many palaces were sacked, and their valuable contents burnt or dispersed. Since that period it has, most likely, been in the possession of some of the poorest of the Neapolitan population, and it was impossible to make out how it had come into the hands of the Lazzaroni boy, from whom it was rescued in the streets of Naples, in 1831, at the moment he was about to scrape off what remains of the painting, in order to get a better price for the copper."

'Denner's celebrated Portrait of an Old Woman,' contributed by W. Dennys, Esq. A most painfully elaborate work of old age—every wrinkle, nay, every hair, depicted with the greatest care, in a glass case, a most curious work for that class of Art, showing how far high finish may be carried without producing any other satisfactory result.

'Portrait of Napoleon, First Consul, receiving an address at Milan,' contributed by J. Auldjo, Esq. Drawn while receiving an address as First Consul, sketched in the Hall of Audience in Milan, by Camuccini, on the back of a letter, and sent by him to his mother, at Naples, who gave it to the lady from whom it came into the possession of Mrs. Thos. Richardson Auldjo, to whom it now belongs.

'Head of Laura,' by Simonini Mimmi. Most interesting, with a charming simplicity of expression.

A curious example of Russo-Greek Art, the property of E. V. Ripplingille, Esq.

'A fine picture of a Dead Christ,' contributed by Dr. Elmore.

A very curious drawing, by Strutt; frontispiece to his "Dictionary of Engravers;" sent up, with many other works, from Liverpool, for the *conversazione* by Jos. Mayer, Esq.

'The Graces,' by Rubens, contributed by W. Dennys, Esq. Believed to be the original sketch painted from the life, and the model from which Rubens (or his pupils) painted several large works of the same subject. It is the picture supposed to have been retained by Rubens's widow, with some others, when the rest of the painter's works were dispersed by sale after his death. The colouring of this beautiful work is much colder than we are accustomed to see, the prevailing tone being a pearly grey on a green ground.

'Canaletti View in Venice.'

'Rubens's Wife,' by Rubens. Very unique work—most highly prized.

'View in Venice,' by Guardi.

'Portrait,' by Rembrandt.

'Francis I.,' by Janet. An exceedingly highly-finished portrait on horseback, very small.

A very splendid Missal (Horæ Beatæ Mariæ

\* See *Lanzi. Storia Pittorica. Essaii Prima Scuola Fiorentina.*

† The heads, however, are uninjured.

Virginis), containing 470 pages, exquisitely illuminated, having 40 large paintings, and 80 vignettes. It is of the sixteenth century, and was probably executed for some one of the Bourbon family, as there is a shield with the *fleur-de-lis*, introduced among the ornaments in the painting of St. Matthew writing his gospel.

'Miniature of Kosciusko,' by Maneret. A perfect gem.

A Miniature, whole-length copy, after Lawrence, of 'Duchess of Richmond,' by G. R. Ward.

'A Miniature of a Child,' by Mrs. G. R. Ward.

'Eight Specimens of Encaustic Painting,' done in Rome, contributed by T. Wyse, Esq. M.P.

'Queen Elizabeth's Prayer-book.' A gem of deep interest and surpassing beauty.

A volume of thirty-two large original Drawings of grotesque designs for fresco ornaments, in imitation of, and caricaturing the fresco decorations of the great masters; contributed by J. Auldjo, Esq.

A peculiarly fine Carving, in ivory, of 'Bacchus,' sent by John M. Brackenbury, Esq., K.H., by Alonzo Cano.

'Albert Durer's Wife,' a carving in soap stone, by himself; contributed by J. Mayer, Esq. Remarkably fine.

Many beautiful Carvings, in ivory, from Flaxman, Thorwaldsen, &c.

A fine Carving, in ivory, of a 'Crucifix,' of the sixteenth century,† obtained from the private chapel of Don Sebastian, brother of Don Carlos, of Madrid, at the breaking up of his establishment, on the decline of the fortunes of Don Carlos; contributed by W. Dennys, Esq.

'A fine Suit of Gilt Armour,' most elaborately engraved over every part.

Another of steel, sixteenth century. Contributed by E. Corbould, Esq.

'A quantity of War Instruments of the Ababde Arabs.' 'A curious Lyre.' 'Apron and Anklets from the Nile.' H. Warren, Esq.

Another fine carving in ivory, of a 'Crucifix,' so extraordinarily fine in expression and form, from which Messrs. Etty, Eastlake, and others have painted pictures.

Amongst the works by living Artists, were two very fine pictures by W. Etty, Esq., R.A., 'Cleopatra,' and 'Genius of Spring.' A number of highly characteristic Italian subjects by Ripplingille. A sweet picture of 'a Village Girl,' by Poole. 'Dolly Varden,' by Frith. Others by Rothwell, Willson, jun., Goodall, Buss, Pyne, Elmore, Sims, Warren, Duncan, Dodgson, J. Ward, R.A.

A great variety of Sketches in folios, by well-known artists.

A fine 'Study,' by Dodgson, from a drawing of St. Paul's.

Several interesting specimens of Fresco, by A. Aglio and Nixon. Fine specimens of Tessellated Pavement and Painted Tiles.

An elegant 'Crystal Casket,' set in gold.

A most curious 'Morse' of the twelfth century, by which the priest fastened his robes, in the original stamped leather case.

Bust, in marble, 'Earl of Devon,' by Stevens.

Small whole length in marble, 'Lady and Child.'

Several other works in marble.

Very fine 'Vandyke.'

'Hogarth,' by himself, very fine, &c. &c.

In fashionable phrase, "the enjoyments of the evening were kept up till a late hour;" an eloquent and impressive address was delivered by the Right Hon. Thomas Wyse, M.P.; and the Secretary read a paper—which had the fault of being too long—written by E. V. Ripplingille, Esq. The consequence of the "experiment" must have been with many as it was with us—a conviction that the Institute may be very useful, and will certainly be very agreeable.

[We believe it is for the present intended by the Institute to hold weekly meetings at Willis's Rooms—the Thatched House Tavern—in St. James's-street; where a spacious and commodious apartment will be at their command; and where books and works of Art will be deposited, until arrangements are made for the more effectual working out of the plan of the society.]

## ART-UNION OF LONDON.

THE 236 works of art selected by prizeholders in the Art-Union of London, have been exhibited at the Gallery of the Society of British Artists, Suffolk-street, Pall-mall East. On the whole, the collection must be considered as highly satisfactory; there are very few productions that may be described as decidedly bad; and if there are none that may be spoken of in unqualified terms as altogether first-rate, the fact is attributable far less to want of taste than will be at first supposed. We do not hesitate to say, that of the pictures uncommissioned, and, therefore, free for selection, the best were chosen.\* This is, surely, as much as the most suspicious can expect. Indeed, we doubt, after all, whether a committee, whose judgment is unquestionable, would have made a much wiser choice as regards the smaller-priced pictures; and with respect even to those to which large prices were attached, strange as it may appear, they might have been somewhat posed to find better; for the majority of pictures that could, with any show of decency, assume to be of the value of £400 or of £300, were not *for sale* in the Royal Academy—where only, we believe, works of so highly-estimated a cost were shown. The more we reflect upon this matter, the more entirely we feel convinced that either there should be no prizes of these amounts, or that the Committee should be free to give "commissions," or to make purchases before exhibitions take place. It is a baseless argument to say that inducements are held out to make ambitious attempts. If junior artists—artists whose fame is not established—seek so large a sum, it must be by covering half an acre of canvas, and asking for the value of quantity in lieu of quality. The real result will inevitably be—what it already has been—that an artist of the middle class, who is neither of the very high nor very low, knowing that the whole exhibition is not likely to contain two pictures of the estimated worth of £400 each, fixes that sum upon his work on chance, when, under other circumstances, the half of it would amply content him. We say, without the smallest hesitation, that of the prizes selected by the Art-Union prizeholders, No. 1 would have been fully paid for by £300, No. 2 by £200, Nos. 3 and 4 by £100; and that there are pictures for which the society have paid £50 or £60 each, better worth the hundreds

\* It must be gratifying to the committee, and to the honorary secretaries more especially, to find opposition gradually relaxing before their steady, continued, most aboriginal, and most honourable efforts. In the *Spectator* of August 19th we find the following:—"The selection is, on the whole, more creditable to the taste of the choosers than those of former years; there are fewer worthless performances; and the highest prizes are not ill-bestowed in the majority of instances, all things considered; in short, there is more judgment shown by the prizeholders than hitherto. This is a favourable sign of the advance of popular intelligence in matters of Fine Art; for the subscribers may be fairly regarded as representing the mass of the community, though including the more enlightened portion of the public, and many artists as well as amateurs." Even the *Athenæum* considers the present exhibition "more satisfactory than the last." The honorary secretaries may look upon these paragraphs as part of their reward; they give tokens of prejudice removing. Ere long, we hope they will find more unequivocal demonstrations, that their services have been appreciated—services altogether gratuitous, rendered without the remotest idea of recompense of any description, yet unparalleled for labour and extent—and we shall, one of these days, have to add, for importance and benefit in promoting the Arts in Great Britain. Mr. Godwin and Mr. Pocock may place these signs of departing hostility as a set off against a disgusting pamphlet recently issued by a publisher in the Strand, on the subject of Art-Unions, and personally insulting to the gentlemen who have done so much for Art. Rumour attributes this pamphlet, and on pretty good authority, to an aged person who has been all his life depreciating the excellence he has hated because he envied; who has never acknowledged any living genius but that which bore his own name, and who, while hobbling over the brief space that lies between this world and the next, is as eager to inflict jagged wounds as he was before malignant impotency succeeded to mischievous vigour.

which the four great prizes have cost. It is not always true, that

"the worth of anything  
Is just the money it will bring."

as some prizeholders would find if their prizes were offered for sale under other circumstances than those which led to their purchase. A fictitious value is very often mistaken for a real value by those who are not justified in depending on their own judgments. If the gentleman who gained the £400 prize had not fancied he was really about to receive a thing worth £400, he would have doubtless taken some picture to which a much better proportioned sum was attached. Thus he would have been actually a gainer, the Society would have augmented its reserved fund, and the artist who got the £400 would have been really benefitted; for it requires no very keen penetration to see that this sale of a picture so much beyond its real worth will do him incalculable injury. If he keeps up his prices hereafter, at the same rate, he will never sell another work; and if he alters them very materially, say by about 30 or 40 per cent, (as he must do if he design to live by his profession,) an admission will be made very injurious to his reputation.\* What we say of prize No. 1, we say, in a degree, of the other larger prizes. Who does not laugh to see "£200" affixed to a painting (No. 31) of a scene in Devonshire? £200, again, for a scene from the Arabian Nights (No. 39), by Mr. Jacobs? £300 for a pretty and pleasant picture (No. 70), 'Jephthah's Daughter'?† Lucky people are Mr. John Harman, of No. 11; Mr. Thos. Stone, of No. 31; Mr. Jos. Newcomb, of No. 39; and Mr. Cyrus Legg, of No. 70; but if we had been fortunate enough to have gained as a prize either of the two bronzes after Flaxman and Westmacott, we should have been very sorry to have exchanged prizes with either of the four "lucky" gentlemen.

Holding these opinions, therefore—and we are very sure they are the opinions of nearly all persons of taste and judgment—it will be our duty to urge upon the Art-Union Committee the necessity of adopting some plan to prevent the recurrence of a very serious evil. Again and again we shall entreat them—boldly to resolve upon "commissioning," or previously selecting, all prizes above the value of £100. We know there are some disadvantages attending this plan; but they are, we conceive, as nothing compared with those which now exist. We shall, perhaps, ere long, take occasion to put this case as strongly as we can to the committee, the subscribers, and the public. We have said that the selection of the works, generally, is creditable and satisfactory. The Gallery presented a most gratifying sight; it was pleasant to know that of the 236 works exhibited all were sold; it was most agreeable to perceive that the merits of no picture were hidden by being placed in an unpropitious light; and it was very cheering to see that works grievously ill used elsewhere, were here seen in due positions, where, at least, they could be judged according to their own true character.‡

\* We are certainly not justified in questioning the right of any artist to ask for his picture any sum he pleases; but we are free to question its policy—either as regards the painter or the Institution. Mr. Charles Landseer is one of those who is bound to uphold the Art-Union of London by every means in his power; for he has received from the Institution no less a sum than £1000.

† As a graceful assemblage of elegant and handsome young maidens, it has very considerable merit; but as an historical picture it is absolutely *nil*: having no discoverable reference to the story of Jephthah's daughter, and in no respect belonging to works of a high class. On this account, therefore, we cannot with pleasure see it selected as a chief prize. If it exhibited a great effort—even if it were a comparative failure—we should have noted its selection with more satisfaction. Taking this view of it, therefore—although by no means disputing its interest and beauty—we should lament to see it engraved as the print for distribution hereafter—a course which some unreflecting persons, who value prettiness more than worth, have advised. If a "Society" for the promotion of Art could be supposed to find no work more likely to advance its great purpose, the impression that would follow would be very humiliating. It would be easy to direct attention to at least a score of pictures, any one of which would be worthy the distinction—would be really valuable as a lesson in Art, and a reward for the attainment of pre-eminence in Art—and any one of which, we imagine, may be procured free of expense to the Art-Union.

‡ We counted no fewer than ten pictures here pro-

And assuredly among this collection are very many works that do high honour to our English School. Here are the firm, manly, and truly English landscapes of Lee, Stark, Pyne, the Wilsons, sen. and jun., Tennent, Jutsum, and Clint; the fine 'Cattle Pieces' of Sidney Cooper, unrivalled in modern Art, and scarcely more than rivalled in Art ancient—the wonderfully finished and elaborately wrought cattle-portraits of Josi; the true and excellent copies of 'Horses' of R. B. Davis; and the capital stable interiors of J. F. Herring. Here are—that excellent work of E. M. Ward, 'Goldsmith and Dr. Johnson'; the 'Dying Cateran,' a picture of deep interest by Mrs. M'Ian; 'The Confession,' a small gem by T. Uwins, R.A.; 'The Love Test,' and 'A Scene from Woodstock,' by T. M. Joy; two beautiful scenes in Italy, by G. E. Hering; 'The Fair Client' of Stephanoff; the truly English characteristic "bits" of T. Clater; the 'Fortune-teller' of C. Stonhouse; the 'Griselda' of H. Le Jeune; the admirably mingled groups and

minently and advantageously placed that had been condemned to infamy in the Octagon Room of the Royal Academy. Among them are Sidney Cooper's 'Cattle at Pasture,' a work that may be placed beside Paul Potter's 'Bull,' Egg's 'Sir Piercie Shafton,' a most excellent picture of the very highest class of merit; Johnson's 'Highland Home,' &c. &c.

landscapes of A. Montague; the 'Italian Peasantry' of A. Elmore. The delicious work by Collins, R.A., 'A Girl of Sorrento spinning'; the exceedingly clever sketch, 'Peace,' by H. Howard, R.A.; the excellent work of Witherington, R.A., 'the supposed death of Imogen'; 'the Defence of Lathom House,' by F. P. Stephanoff; 'Florimel in the Cottage of the Witch,' by F. R. Pickersgill, &c. &c. To enumerate all the really good pictures would require greater space than we can spare. The water-colour selections are all excellent; among them are choice specimens of Copley Fielding, S. Prout, Dewint, Warren, Topham, Jenkins, Hunt, Wright, &c.

The rooms had other enrichments; some specimens of the set of drawings by H. C. Selous, illustrative of the 'Pilgrim's Progress,' of exceeding merit; the small marble statue, the 'Broken Pitcher,' by W. C. Marshall; a proof impression of 'Una entering the College,' a really good print of a striking and valuable subject; a bronze copy of Flaxman's glorious work, 'Michael and Satan'; and also a bronze copy of Westmacott's delicious group of a 'Nymph and Child with a Butterfly.'

The two groups have been drawn on wood by Mr. Corbould, and engraved by Thompson and S. Williams. These we have obtained permission to introduce into our columns.

## OBITUARY.

JAMES HAKEWILL.

THOUGH an architect by profession, this gentleman was known to the public chiefly by the productions of his pen and his pencil; which, for the most part, relate to subjects connected with his other pursuits. Such, however, was not the case with his first literary performance in 1812, that being a novel entitled "Cœlebs Suited, or the Stanley Letters"—one of the numerous works of didactic fiction suggested by Hannah More's "Cœlebs," then in the zenith of its prodigious but brief popularity. In the following year appeared his "History of Windsor and its Neighbourhood," illustrated with engravings and vignettes from his own drawings: and to this work Sir Jeffry Wyattville is said to have acknowledged himself indebted for hints which he endeavoured afterwards to carry out in his alterations of the 'Castle;' yet hardly could he have coincided with the writer's views as to the Grecian, or similar style, being decidedly preferable to the Gothic for domestic architecture at the present day. On the Continent being again opened to English travellers, by the general peace, Mr. H. went to Italy, accompanied by his wife, and there passed the greater part of the years 1816 and 1817, collecting materials for his "Picturesque Tour of Italy." This work, which originally appeared in twelve parts (both quarto and folio), with 63 plates, 1818-20, may be considered his principal one; and it would have been superior to what it now is, had he given fewer landscapes and general views, and more subjects of that class of illustrations which form the peculiar and most interesting feature of this collection, we mean, the interiors—charmingly executed in outline by Moses—showing some of the apartments and sculpture in the museums of the Capitol, the Vatican, and Florence. The literary part of the work amounts to very little more than brief letter-press descriptions of the subjects of the plates, and are rather barren of that remark which might have been expected from the pen of an architect, capable, it may be presumed, not only of feeling, but of expounding the poetry of his art.

In 1825 he published, in a folio volume, another Picturesque Tour the subject of which was the "Island of Jamaica," from drawings made in the years 1820 and 1821; and in 1828 "Plans, &c., of the Abattoirs of Paris, with consideration for their adoption in London." His next work, which appeared in 1835, and was, no doubt, written with a view to the then approaching competition for the new Houses of Parliament, for which it was understood that the "Elizabethan" style would be preferred;—was his "Attempt to determine the exact Character of Elizabethan Architecture," illustrated by parallels of Dorton House, Hatfield, Longleat, and Wollaton in England, and the Palazzo della Cancelleria, at Rome. He himself sent in a set of designs for the "Houses," in the modified style he had recommended, but they did not attract much notice, otherwise than as being too decidedly Italian, with very little of the character of our own Elizabethan. It appears from the accompanying description printed in the "Catalogue of the Designs," that he construed the term "Elizabethan" as the commencement of good taste in this country, by the adoption of the designs of Italian architects as seen at Hatfield, &c. &c.; and was also of opinion that a design in it "might, both in its external and internal finishings, be executed for one-third less than any Gothic design of equal magnitude!" The "very superior advantages of a Palladian edifice, in point of beauty, convenience, and economy," did not, however, take either with the commissioners or the public.

In 1840 he was engaged in making drawings for a projected work on the Rhine; but which has not yet appeared. Mr. Hakewill died at his apartments in Adam-street West, Bryanston-square, on the 28th of May, in his 65th year.

WASHINGTON ALLSTON.

It is announced in the American journals that Washington Allston died at his residence in Cambridge, Massachusetts, on the 8th July. He suffered from ill health for several years, but his death was sudden, and entirely unexpected even by his family. Mr. Allston ranked high among the painters of his time. He was a native of South Carolina, and entered Howard College in 1796, having spent his preparatory term, by the advice of his physicians, at Newport, R.I. Being smitten with the love of

painting, for which he had a strong natural genius' he embarked for London in 1801 with a brother artist, and spent some three years as a student of the Royal Academy, of which West was then president. In 1804, he went with Vanderlyn to Paris, and thence to Italy, where he remained four years. Returning to America in 1809 he married at Boston a sister of the late Dr. Channing, and in 1811 sailed again for England. His reputation was now well established, both at home and abroad, and his picture of the 'Dead Man raised by Elisha's Bones' gained from the British Institution, when the most famous artists of his time were his competitors, the prize of 200 guineas. The picture was afterwards sold to the Pennsylvania Academy of Fine Arts for 3500 dollars. In 1813, just after his own recovery from a severe and dangerous illness, the sudden death of his wife cast him into the deepest depression and melancholy. In 1817 he accompanied Leslie to Paris, and in 1818 returned to his native land and took up his residence, where it has ever since continued to be, at Cambridgeport. In 1830 he married a sister of Mr. R. H. Dana, who has survived him. Though painting was undoubtedly the art in which he most excelled, Mr. Allston was well and widely known as a most accomplished scholar, and a writer of great power and the nicest taste. He died at the age of 64.

MR. GEORGE HOLLOWAY.

Died, at Christchurch, on the 12th of July, in the twenty-third year of his age, George, the eldest son of Mr. George Holloway, ship-builder of that place. He was a young man of great talent, which he had happily improved by two years' study under Mr. G. Patten, A.R.A., the eminent portrait painter. He lived in the esteem of all who knew him, and his death is deeply felt by them. His time was short, and the specimens of his promising genius are consequently few: but he has left behind him the most valuable and lasting portrait, indelibly fixed in the memory of his family and friends—the portrait of an affectionate and dutiful son.

## CORRESPONDENCE.

## COLOUR IN FRESCO PAINTING.

4, Gordon-square, Aug. 23, 1843.

SIR,—At a moment when the attention of the Government and the public is so engaged by the efforts which are making towards the decoration of the new Houses of Parliament, it becomes the duty of all to offer the tribute of their considerations or reflections on a subject so peculiarly and universally interesting, however much they may be, like myself, unwilling to intrude their humble opinions. In the spirit of performing a duty which I conceive all owe, especially artists, who of necessity must be extremely interested in this matter, I venture to offer, through your valuable journal, a few remarks on a subject which appears to me of no small moment, as touching the important question of the durability of the works of Art which may eventually adorn the walls of the most important and imposing building in the empire.

It is not my intention to discuss the merits of durability, whether of fresco or of oil painting; we have had enough experience from each to show us very satisfactorily the fruits of minds ages since "gathered to their fathers." The question, therefore, of durability does not lie with or depend on either, but rather with the pigments employed: and here appears to me to be the root of the matter.

Formerly, when those pictures were wrought, whether in fresco or in oil, the number of pigments were very few, and the painters themselves were in the habit of preparing their own pigments, and often, especially among the Dutch, were prepared with much care and attention. Now, however, colours are prepared by the colour manufacturer; and whilst modern science has enriched the painter's palette with a greater number of colours, that same science has discovered many modes of manufacturing them, in which the question of cheapness, not durability, is the principal consideration. If, therefore, pictures be painted with such pigments, it is quite evident, whether they be frescoes or oil pictures, they must fade.

In consequence of the expenses attending their preparation, the manufacturers prepare them in large quantities for house-painters, paper-stainers, toy-manufacturers, &c. &c. The last quality these purchasers would seek is *durability*; and, as compared with the quantity of colour used by such levianth consumers, the artist uses but the merest trifle, it is not worth their while especially to prepare others for him; and as till very recently the artists' colourman was not a manufacturer of colour, the artist was of course compelled to furnish his palette from the same source, although to him durability is of such vital consequence; and unless the artists' colourman be acquainted with the manufacture of colours, and have the means of manufacturing them, he is compelled to go to the same

market as the house-painter and the paper-stainer; and this being the case, it does not require the consideration of a moment to see, as I have said, that the question of durability lies in the pigments employed, and more especially proceeds from their mode of manufacture.

The colour-manufacturer, who must of necessity have a competent knowledge of chemistry, can, from the same permanent bases, manufacture the same pigment by various methods, at various cost, and also of various degrees of durability. To the eye, each preparation is so positively, or so nearly alike, that it is important to him to mark each preparation, that he may be able afterwards to select from among them the permanent from the evanescent; for, being manufactured from permanent bases, chemical analysis would not enable him to decide; and as the manufacture of the permanent pigments is more costly, and these are required only by the artists, and but in small quantities, it is quite evident, as a matter of commerce, that to remunerate himself the colour-manufacturer must also be the artists' colourman; or, in other words, have the advantage of selling his colour to those purchasers who will remunerate him for his cost and trouble, and with whom *durability* is the only question of importance.

When, then, it is considered that the interests which are at work in the production of pigments operate to procure the evanescent rather than the permanent, and that there are various modes of manufacturing a colour, varying in durability, from the same permanent bases, and that chemical analysis would often be defeated in the attempt to decide which preparation was permanent, it appears to me, therefore, in order to secure the durability of the pictures—which we hope will be handed from generation to generation, and like the works of the immortal bard, will be for "all time"—that it should be a *sine qua non* that the colours be all prepared by some manufacturer especially appointed, and that the artists employed, whoever they be, shall be furnished by the Government Commission with such colours as they may require, and limited to the use of such as are unquestionably permanent. Without some arrangement of this sort, either the painter must be manacled by a palette confined to the natural earths; or, if he venture on aid from his colours equal to the demand of his genius or his imagination, he or the Government must risk the chances of his knowing where or how to procure for himself the sure means of making the same, by which he may have earned a niche in the temple, a deathless one.

If already, and in the first effort to test the talent of the country, and while as yet the demand for its exercise was new, it has proved itself satisfactorily equal, we may fairly presume that with more extended means, which science of the present day offers, and which the artist can and ought to have put into his hands, when he shall have improved those talents by means of this magnificent and spirit-stirring opportunity for their exercise, he will be able to leave as much in his own works for the admiration and instruction of future generations as he has found for himself in those of Michael Angelo and Raffaele.

I do not pretend to point to any individuals: this would be invidious; nor would I risk being thought so impertinent as to offer to guide the commission in their selection of any one who might be thought worthy of the trust. A wise selection may easily be made from among those who have done "good service;" who are, it may fairly be presumed, so well and so thankfully known, that their names would not fail to suggest themselves. Happily there is room enough to choose.

Yours, &amp;c.,

J. D. HARDING.

[Mr. Harding has properly directed attention to a subject of very vital interest, upon the due consideration of which, indeed, will mainly depend the success of the great experiment hereafter to be tried in Westminster. Of those who have interested themselves in the preparation or discovery of colours for artists, we know of no more than three:—Field, Bachoffner, and Winsor and Newton. Of these we should say, judging from his treatise on colour, Mr. Field stands at the head; but he is not, we apprehend, a colour-manufacturer. Mr. Bachoffner has written a small treatise on colour for the information of artists; he, we believe, has a reputation as a chemist; but neither is he, we imagine, a colour-manufacturer. Messrs. Winsor and Newton are very extensive colour-manufacturers; and, as far as we have had the means of judging, we should say are perfectly acquainted with the business, so as essentially to serve the artist with durable colours, such as he may depend on without requiring to submit them to any test for his own satisfaction.]

## THE ARMOUR OF THE BLACK PRINCE.

SIR,—Permit me to make a short reply about the black armour of the Black Prince. The armour in the Cartoon is not meant to be black—for by correspondence with Sir Samuel, and from his work, I am acquainted with the truth; but when you are confined to black and white, you can only express the piercing darks of armour by black, and the lights by white; and as the thigh and leg of the Prince are in shadow, I was equally confined—dark was wanted, and black chalk can only express dark in Cartoons. A word too on the introduction of Satan in the other. I had as much right to wield the materials Milton afforded me, as he had to invent them.

Milton makes Satan fly at the approach of Christ: I think it more consistent with his grand character to make him listen and defy, at the same time with appre-

hension. An artist should never be pinned down to circumstances where it is not matter of fact; and, therefore, I take leave to differ from your remarks, and am your obliged servant,  
B. R. HAYDON.

[We, of course, give ready insertion to Mr. Haydon's letter, according to him the full benefit of his own view of his own work. But we may take this opportunity of saying we cannot but lament the singular bad taste of an advertisement which appeared in the *Times* of August 24. It is as follows:—"Cartoons—Westminster Hall.—The people are requested to look at No. 33—'THE CURSE'; to reflect on the shrinking guilt of Adam—the imploring agony of Eve, clinging to her husband—at the defiance of Satan, the evil spirit—the mild, but severe justice of Christ—at the serpent, cursed and falling—and at the lion and tiger meeting, with the first sensations of evil and blood. The reason that Christ and Satan are of large stature is, that the ancients always represented their supernatural beings larger than their human. This cartoon is on the principle of the Italian school, and not the German." Such advertisements do incalculable mischief to the cause of Art, bridging it and its professors into disrepute. This criticism of a painter on his own work is a mournful example of the folly into which temper may lead a man. It is grossly absurd. Alas! if Mr. Haydon had been endowed with less vanity and more pride, he would have been a great man. As it is, egotism has literally eaten him up; overweening confidence in himself has prevented even the chance of improvement; and the history of his life will form a remarkable illustration of genius smothered in self-love. Gifted with abilities of a rare order—strong energies, physical power, rapidity in conception and execution, considerable learning, and knowledge well digested—all his advantages, natural and acquired, have gone for nought! The trumpet that sounds his praise is ever blown by himself: when he addresses an audience on the subject of the Arts it is always in the spirit of "THE ART IS ME!" The consequence has been that his auditors listen with a sigh and a sneer.]

#### ACADEMY STUDENTS.

SIR,—I lately made a hasty visit to London, principally, and first, to see the cartoons, the glorious triumph of English talent.

A circumstance was mentioned, the truth of which I had not time to establish, but which is probably correct, and I would ask of you to obtain the information from head-quarters, because, if proved, the fact would silence a few influential declaimers against the Royal Academy, who are incessantly pressing their vexatious, crabbed question, what has it ever done for Art?

It was stated to me that R. Cook, Esq., R.A., had informed Sir Robert Peel that he had ascertained all the successful candidates for the premiums, excepting two, had been students of the Royal Academy. Of Mr. Armitage he was not certain, but such a name appeared on the records of the society, and from the date, &c., he had no doubt but that his name might be included in the list. If so, what a triumphant answer to the above question.

S. P.

[We have ascertained that this statement is perfectly correct. It ought to be stated, also, that two of the artists who have gained prizes had obtained the gold medal of the Royal Academy—that is to say, they had received the highest honour the Academy can confer, short of election into the body—the prize for historic composition. The best answer, therefore, to the question—what has the Academy done?—is this: they have raised up a school of young men who are ready, at the call of the Nation, to produce works that will do honour to their country.]

#### ARTISTS' LIBRARY.

SIR,—Would you be so kind in your next number to state where the works on the Fine Arts, such as "Lives of Artists," &c. &c., are on loan? I have inquired at several libraries, but the answer is, they have no such books. Being a stranger to the ways and whereabouts of London, I should feel obliged for information.

Yours, &c., A CONSTANT READER.

[There is no library where works connected with the Arts are kept. At some of the circulating libraries in the neighbourhood of Fitzroy-square,

"where artists most do congregate,"

one may get "Cunningham's Lives," and possibly one or two other unimportant volumes; but those who desire KNOWLEDGE, must seek for it at the British Museum. We have already explained, that it is easy to procure a reading ticket. The evil is one which the "Institute of the Fine Arts" is designed to remedy. No doubt, as soon as this Society obtains its "habitation," a library will be immediately formed, and if proper steps be taken, it will rapidly receive accessions free of expense.]

#### ASSAULTS ON THE CARTOONS.

"ET TU BRUTE!" It is grievous that the bravest—almost the only—blow the collection in Westminster Hall has received, should have been from a weapon wielded by E. V. RIPPINGILLE, himself an artist of high ability, one of the contributors, and consequently one of the competitors for a prize—which he did not obtain. His article on "the Cartoons" we cannot pass by unnoticed; we refer to it with exceeding regret, as affording conclusive evidence of the difficulty which an artist must inevitably feel in criticising the works of his contemporaries—and the almost impossibility of rendering to them full and ample justice, to say nothing of generosity. We have no inconsiderable reliance upon the integrity of Mr. Rippingille's motives; and although it is necessary to refer to the fact that one of the prizes was not awarded to him, we by no means design to infer that this disappointment has originated the very unfair and ungenerous view he has taken of the works of successful rivals. But there are cases which entirely unfit a man for the duty of impartial judgment—circumstances which take from him the capability of arbitrating rightly—where the passions, separable from none of us, overpower reason, and render the most upright unconsciously unjust. Sure we are that, in the course of a few years, Mr. Rippingille will marvel what evil spirit could have prompted him to write and print his article on "the Cartoons,"—and that even by this time he will have seen that wisdom at least, if not mercy, might have prompted him to withhold it. If his opinions were as sound as we think them unsound, if the successful works had been as worthless as he considers them, and if the judges were really as ignorant or partial as he believes them to be—we humbly contend that good taste might have suggested the propriety of silence. Mr. Rippingille's criticism is indeed brief; he takes to pieces only six or seven of the eleven prize-cartoons; but he leads us to believe that those he does not notice are a few degrees worse than those upon which he does pass his remarks. Of the six or seven there is not one upon which he bestows the smallest particle of praise. His criticism commences with the cartoon, 'Cæsar's First Invasion of Britain.' This work, according to Mr. Rippingille, is an atrocity in all respects, without a single redeeming point. "Cæsar is an abortion;" "the squalid wretch, hanging to the bridle of the horse, must be a maniac escaped from some cave asylum, in the absence of his keeper;" "there is no composition in the design; the whole is a confused mass, without object or purpose;" "of bad drawing there is abundance;" "worse than the drawing is the character of the figures—they are puny, dwarfish, vulgar, and commonplace;" "an army of brutes, instead of men, is what no artist of sense would introduce;" "in the whole there is not one original position or combination." Poor Mr. Armitage! if he can only believe all this to be true now, he will go and hang himself, bequeathing the sum of £300 to the Exchequer he has so outrageously robbed. But, happily, critics, as well as doctors, differ; and Westmacott, Cook, and Etty, to say nothing of Peel, Rogers, and Lansdowne, have not considered the cartoon so utterly execrable; possibly, therefore, Mr. Armitage may think it worth his while to live. Mr. Frost's 'Caractacus' is let off more easily:—"As the work of a young man, it is highly creditable;" yet, "there is clearly nothing original in the conception, nor in the treatment of the subject;" another sum of £300 surreptitiously obtained. Next comes on for notice Mr. Cope's 'Trial by Jury.' This work—so generally lauded—has been very scurvily treated.

"It is defective in incident, that tells more than the bare fact; (?) the subject is capable of a much wider range of feelings and expression, and infinitely more character. It wants earnestness, such as the early masters would have carried into it."

There is no word of praise to qualify this condemnation. The "criticism" is complete in twelve lines, not one of which contains an intimation that the work possesses the slightest merit to entitle it to the award, except that inasmuch as it is "the best chosen subject, almost for that reason it ought to be honoured as it is."

Next comes 'St. Augustine Preaching,' the work of Mr. Horsley. This cartoon "has no human

interest whatever; it is utterly devoid of any mental manifestation, and has but an inferior modicum of what is merely manual and artistic."

"In character and expression this design is as puerile as it is in thought, and what there is of a technical kind is confined to the commonest tricks of the schools."

Next is 'The Cardinal Bouchier urging the Queen Dowager of Edward IV. to give up from Sanctuary the Duke of York,' the work of Mr. Bell. This cartoon "looks like the work of an operative artist rather than as an exemplification of the powers which give dignity and importance to Art, and distinguish it as an intellectual pursuit." "It fails in the higher attributes of Art, and both in pictorial conception and execution is extremely feeble and deficient."

Next comes 'The Fight for the Beacon,' the production of Mr. Townsend, which some very ignorant people foolishly imagine a work of great ability. Nothing of the kind. Mr. Rippingille knows better. It is "a mere display of animal or brute force;" the "design having very slender claims to attention."

Mr. Rippingille has, thus, condescended to be somewhat elaborate in his "criticism" on the six cartoons to which sums of £300 and £200 were awarded. The five which received rewards of £100 he dismisses in a sentence: they are "paralleled and surpassed in merit by many others, and might, on that account (?), be passed over without a remark;" and he does, therefore, "pass them over," criticising one only—Mr. Selous' cartoon of 'Boadicea'—"remarkable, principally, for a mere display of the figure, and a set of commonplace actions and postures;" "its grand defect is that it displays no thought; its only merit, that it shows some dexterity of hand and eye." As regards execution in drawing, it is very defective; the whole design is utterly devoid of thought and invention, or novelty of any kind."

Excepting as regards these six or seven, not a single word of comment is bestowed upon any of the 140 cartoons—or, rather, 139, for we exonerate Mr. Rippingille from the duty of criticising his own—although, as our paper of to-day will show, if he did so he would have a precedent to quote, in a brother artist and a brother critic. And here let us, very respectfully, caution Mr. Rippingille to avoid the fate, by not following in the footsteps, of this "brother artist and brother critic." He is treading precisely the same road, and is in peril of the same destiny, which may not be averted by eulogising the "Royal Academy" through thick and thin, any more than it has been averted by execrating it in all shapes and forms. "No man can serve two masters;" we know which of the two we should advise Mr. Rippingille to "cleave to," and which to "forsake."

If M. Merz, the German critic on our British Art, had written this criticism on British cartoons, we should have felt little surprise; but we confess it did astonish us to find it emanating from the pen of a painter, printed in a publication conducted by him, avowedly as "A GUIDE TO THE PUBLIC."

What are the public to think, who happen to read these remarks? Will they not naturally ask, what is the value of 140 cartoons, the seven best of which are worth nothing? May we not, any of us, contrast the "sayings" with the "doings" of Mr. Rippingille; and having first examined the miserable specimens exhibited in Nos. 64, 105, 100, 124, and 128, turn to receive encouragement and hope from No. 13? Alas! to "do" is not so easy as to "know what were good to do;" if it were, "chapels would be churches, poor men's houses princes' palaces," and Mr. Rippingille's cartoon a better work than the works of Messrs. Armitage, Cope, Bell, Townsend, and Selous.

We have not considered ourselves bound to show—what, however, we do not hesitate to assert—that the criticisms of Mr. Rippingille are altogether unsound; that, indeed, in several instances

\* Under all the circumstances, the artist and the amateur will have no reason to lament that, "in conformity with the plan laid down" in Mr. Rippingille's work, "it was never intended to comment upon the merits of contemporary artists, or to criticise their works except in special cases." But we humbly think that neither artist nor amateur will rejoice that the exhibition of the cartoons has been considered to be "one of that character." So to "guide the public" that the whole collection may be despised, is scarcely the duty of the artist, while the question, shall the Arts receive or be denied national aid, is still pending.

they are ridiculous to a degree, as, for example, in noticing the 'Trial by Jury':—

"There is no evidence that the parties are engaged in the presence of a murdered corpse and the perpetration of a dreadful crime. No observant person, who has ever entered a court of justice, or the room of a coroner's inquest, can mistake what is here meant, or fail to feel what is wanting."

We confess this reads very like nonsense. The surest "evidence" is the dead body—which Mr. Cope has drawn; and the murderer, who cannot be mistaken. What the "observant person" is to find in a real court or at a real inquest, to tell him what is "here meant," we cannot imagine. He would certainly not find the "corpse" at either place, although probably he would encounter the assassin.

We do not quarrel with Mr. Rippingille's opinions, sound or unsound;—he is perfectly at liberty to prefer a Satyr to Hyperion. As he has undertaken to "guide the public," we may lament that they are not more free from prejudice or predilection; but he has an undoubted right to think all the prize cartoons as wretched as he says they are, and the judges as entire boobies as he assumes them to be. We do quarrel, however, with the bad taste that could have prompted an artist—a competitor for prizes—to run down so utterly every production of every successful rival. It has been said of poets—we know not that it can be so said of painters,

"Poets are Sultans, if they had their will;  
For every poet would his brother kill!"

#### ASSAULTS ON THE ACADEMY, &c.

A LETTER has reached us, addressed to "Her Majesty's Commissioners on the Fine Arts," and signed "An Admirer of Historical Art and Fair Competition,"—a signature which, although affording a key-note to the whole, had been better received under the more ingenious one of "A Disappointed Exhibitor." The "representation," as it is termed, is said to be induced by "the extraordinary interest excited by the exhibition of Cartoons, and the singular results of the competition." Even thus far, we have written almost enough to show the spirit of the document, over which we should have passed lightly as the natural voice of disappointment, were it not that it is interspersed with personalities which we know, and the writer must know, to be groundless.

After attributing, as is usual in all similar cases of discontent, much of the evil of which he complains to the "baneful influence" of the Royal Academy, he says, "Sir Robert Peel, Sir R. H. Inglis, and Mr. Hawes, the parliamentary protectors of the Royal Academy, are members of the Royal Commission; and why do we not find on the list, Mr. Ewart, the chairman of the Parliamentary Committee in 1835-6—Mr. Hume, who has repeatedly called the attention of the House of Commons to the management and effects of the Royal Academy; or Mr. Hope, a gentleman educated in the best principles of Art? Why have they been excluded?"

Now this question looks much as if some particular interest could have been solicited, had these, or some of these gentlemen, been appointed to the commission. Thus does the writer impute indirectly to them that partiality of which he directly accuses others. We could continue the list and add twenty other good names, and ask why they were excluded; and, if the question were seriously replied to, the response could be no other than that it was inexpedient to extend the list. By his very phrase, this writer goes further than simply arraigning the formation of the commission: he implies an unworthiness of motive, which he knows cannot exist; a form of accusation which it would be unwise for him to develop into detail. Of the three names mentioned, Mr. Hope is the most prominent as a patron of Art, and for the "exclusion" of this gentleman there can be no substantial reason advanced, further than for any other possessing knowledge of Art, of whom many might be named. With respect to the other two gentlemen he names, what confidence soever their respective political admirers may vote them, they cannot be allowed any claim to refined judgment in matters of Art; indeed Mr. Hume, "upon principle," does not purchase pictures; he had rather be considered our little Titus Pomponius—our Atticus upon a small scale—

*elegans non magnificus, splendidus non sumptuosus*—he has a sphere of utility, wherein his orbit is cast—but he has not yet qualified himself to adjudicate on questions touching the merits of Fine Arts.

The following passage is in the same strain, and contains, by implication, an attack upon one ranking among the most accomplished painters of this or any other time:—

"Mr. Eastlake is your secretary, a gentleman of education and refined talent, but, as an academician, formally pledged to promote the honour and the interest of the Royal Academy."

Now the direct meaning of this is that Mr. Eastlake would support the Academy at the expense of honour and principle, and the oblique reading, that there is at the bottom of this commission some diabolically traitorous plot to injure somebody that nobody knows anything about. We cannot insult Mr. Eastlake by offering one word in vindication of his motives, which are open to all the world, and honoured by all the honest portion of it. The sententious and would-be pithy, and startling style of this writer reminds us of the solemn tones that issued from the head of the old German marshal on its appearance to his son.

This writer is earnest in impressing upon us who are not the talent of the country, but leaves us totally in the dark as to whom we are to look up to as these ill-used and nameless painters from whom so much might be expected. He impugns the decision of the judges, but refuses to illumine them and us with his own opinion as to those cartoons which *should have had prizes*. He is, therefore, wanting in justice to himself, and also to those whom he would rank as his opponents, as depriving them of the benefit of the full-length enmity of a good and loyal hater. He writes us only half a book—but the other half we ourselves can supply.

"We next come to the decisions," says the letter:—"The eleven prizes were awarded, and not one of the eleven was given to an academician, nor one to any of the known opponents to academic influence. The striking incompetency of the academicians who have competed, opened the eyes of thousands to a very natural reflection, i.e., if men who have arrogated to themselves the control of Art are found to be deficient in a competition like this, how is it that they are permitted, as academicians, to retain, for life, the all-important and dangerous power of deciding the fate of other artists?"

Now the task of the judges upon this occasion has been by no means enviable; indeed so little desirable, that we believe more than one were anxious to be absolved from the duty. It is difficult, nay, impossible, to satisfy all; but, with perhaps one or two exceptions, we know not how a committee could have more ably acquitted themselves.

It cannot be supposed for a moment that the judges would interest themselves to know the names of the competitors and their respective productions. There is a good deal of whining about Mr. Eastlake's inquiring whether the cartoon was the *bonâ fide* production of the artist; about recognition of style, and other puerilities really beneath serious notice. With respect to the academicians who have competed, they seem for this purpose to have stepped out of their own peculiar styles, inasmuch that any great success with the majority of them might have been pronounced *lusus artis*, as much as their own versatility of talent would have shown them to be *lusus nature*. In such cases, therefore, as no signal triumph could be reasonably expected, no reproach ought justly to follow.

This "Admirer of Historical Art and Fair Competition" concludes his letter, and favours us with his own deductions. "From this statement it appears that, in forming a royal commission for the purpose of carrying out a new system in respect to the Fine Arts, Sir Robert Peel included himself and several other gentlemen particularly distinguished as uncompromising supporters of an academy that is especially interested in preventing or perverting the intended plans of the commission, whilst distinguished persons known to entertain different views were singularly left out. That an academician was appointed secretary to this commission. That, although the competition was pretended to be strictly secret, the intention of the commissioners was defeated by that secretary making himself acquainted with the productions of various candidates, by inquiries that he

made whilst attending at Westminster Hall to receive them."

This is the most gratuitously base attack upon character we have of late seen; and we cannot help observing here, although no such testimony is wanting from us, that we believe the probity of Mr. Eastlake to be unimpeachable—his principle of honour so sterling, as to shrink with disgust from the slightest act of questionable integrity; and we know no other gentleman better qualified by habits and accomplishments than Mr. Eastlake, to fulfil such duties as those which he has just discharged with so much honour to himself, and benefit and satisfaction to the public.

The point of this "statement" is—*nil*; it proves nothing, shows nothing. The writer makes no direct complaint of individual injury or general abuse, because there is nothing to complain of; his epistle is not *à propos* of the competition, but directed against the Academy, with a foul attack on the character of a gentleman who occupies a position beyond the reach of slander.

Were there in this letter any real grievance, none more readily than ourselves would support a complaint. We doubt not that there are many others who hoped for a different award of the prizes before the exhibition was thrown open; but no reasonable mind, on a candid review of these cartoons, could dissent from the decisions. It is true that the exhibition does not fully represent the capabilities of British painters, because many of the most gifted of them declined competition; but to judge of this exhibition with reference to this is at least unjust. Those works which have received the approbation of the committee are the most worthy of it; in what position they might have stood with respect to others which might have been sent in, is another question.

This anonymous writer seems anxious to signalise himself as an opponent of the Academy; but we cannot believe that these, even were they what *Hamlet* calls himself, "indifferent honest," would be proud of this Paladin. If he be, or is to be, the stalkinghorse of any clique, he must not amuse himself with the illusion of their love and respect while they make use of him. Much that he misstates was known to him before the exhibition. Was it the hope of reward that kept him silent until after the decisions? He seems to deplore the "exclusion" of his particular Augustus from among the judges. If his patron had been packed into the judicial committee, why should not every other exhibitor have had the same advantage? But, finally, the impartiality of the decisions is self-evident, for those to whom they were awarded have been comparatively unknown; but for this "Admirer, &c.," to have secured a prize, it was necessary that he should have had a patron on the committee; but, alas, the Pharaohs that were there knew not Joseph.

#### PETREA.

BY MRS. VALENTINE BARTHOLOMEW.

On seeing the exquisitely illustrated work of the "Holy Land," by David Roberts, Esq., R.A.

"I will lay thy cities waste, and thou shalt be desolate."  
*Ezekiel, xxxv. 4.*

Petrea the mighty! city of God's wrath,  
O that my feet could tread thy stony path!  
O that mine eyes could see thy desert plains,  
Thy rugged mountains, and thy ruined fane!  
Great in thy power, and strong in thy decay,  
Thy beauty humbled, yet not passed away!  
And when thy doom, in its fulfilment, must  
Scatter thy broken columns in the dust—  
When Desolation seeks in vain a stone  
To make her footstool, or erect her throne—  
Then shall thy present glory triumph still,  
Living for ever through the artist's skill!

Thou art the fairest of the sisters three,  
Genius of Painting! all hearts bow to thee!  
Music and Poetry, with voice divine,  
Can draw a thousand votaries to their shrine;  
Both can describe events that onward roll,  
In strains or language that enchant the soul:  
But THOU alone the rainbow tints hast caught,  
To stamp with life the poet's brightest thought.

## VARIETIES.

**ROYAL COMMISSION.—THE FUTURE.**—The four advertisements we published last month have, no doubt, been deeply pondered over by the many whom they concern. They are, all of them, deeply interesting to artists—even those that announce a demand for “metal work for screens,” “ornamented pavements,” and “heraldic decorations;” for these comparatively subordinate objects form so many essential parts of a great whole. There is one paragraph which occurs in each of these advertisements—“the invitation to send designs and specimens is confined to British subjects, including foreigners who may have resided ten years, or upwards, in the United Kingdom.” To the advertisement that more peculiarly interests the artist it is, we presume, scarcely necessary for us to refer. We publish it again in our columns of to-day. Every line of it must be attentively read; and the memory must be strongly impressed with the importance of not putting off the task of answering it until the month of June is nigh at hand. Procrastination is not only “the thief of time,” it is the thief of honour, fame, and fortune. We could name several artists who were not among competitors in the recent trial, simply because, in postponing for a week or so to commence the work they were just a week or two too late in completing it. Above all, it must be remembered that, “artists who propose to exhibit must signify their intention on or before the 15th of March.” There are not a few who will regret that the invitation to contribute actual Frescoes was not postponed for a year or two; but it by no means follows that, although it has been considered desirable to furnish specimens so soon, the artists will be called upon to perform the work suddenly—without time to bring practical experience to the aid of genius. It will be observed that no premium is offered to successful candidates—the employment that will arise out of success being considered as an ample inducement and a sufficient reward. Although an artist is not required to send a cartoon with his fresco example, he is permitted to do so. Let, then, every artist who intends to compete, bear in mind, that “THE COMPETITION HEREBY INVITED, HAS FOR ITS OBJECT THE EXECUTION OF FRESCO FOR THE DECORATION OF THE PALACE AT WESTMINSTER.”

**THE RECEIPTS AT WESTMINSTER HALL** have been considerable; but our readers are aware that out of these receipts £1000 have been distributed as “honorary rewards” among the artists who contributed, but did not receive prizes. The expenses have not been small,—the cost of catalogues, attendants, police (for even this item must be defrayed out of the moneys received), &c. &c., reaches to a large sum; and, probably, when the whole of the amount shall have been ascertained, and the whole of the expenses paid, the residuum will not be sufficiently great to be worth dividing, except among “charities” connected with the Arts, upon which, perhaps, it will be bestowed. At all events, the Commissioners decided before they separated, that NO MORE PREMIUMS OR REMUNERATIONS SHOULD BE GIVEN; so that the question is set at rest. Whatever balance there may be, it is right to say distinctly, there will certainly be no additional award.

**THE EXHIBITION** closes to-morrow (Saturday, the 2nd of September); on that day it will be open to visitors paying one shilling each. During the next week, exhibitors will send for their “cartoons.” A notice to that effect appears in our journal under the head of “Advertisements.” The number of visitors who pass the doors have frequently averaged fifty per minute: the bulk being principally of the lower class; and notwithstanding the importunity with which the cheap catalogues are offered for sale outside, yet a fair proportion of the sixpenny catalogue is sold. So orderly from the first

has been the conduct of all who have entered, that upon no one occasion has the interference of the police or officials been called for. It is only necessary to see the dense throng, to understand at once that every individual is deeply interested, having gone thither with a desire of profit—and it cannot be doubted that thousands have departed much wiser than they went. Upon this most essential matter we hereafter have much to say.

**THE FRESCOS IN BUCKINGHAM PALACE GARDENS.**—Of the fresco embellishments, concerning which we offered some remarks last month, there remain two not yet finished, or, we believe, commenced—those undertaken by Mr. Eastlake and Mr. E. Landseer. It will be readily conceived that the occupation incident to his office as Secretary to the Royal Commission has hitherto prevented Mr. Eastlake from performing his portion of the task. We trust, however, now that the “second report” has been delivered, and all preliminary arrangements have been made, a relaxation from labour will restore Mr. Eastlake to his profession—from which he can ill be spared, even for the great purpose of laying the foundation of “National Art” in Great Britain.

**THE ELECTROTYPE.**—*Fac-simile* copperplates produced by this means, are at length shown to be in every way equal to the original plates, both in the quality and number of impressions yielded. We have had an opportunity of inspecting at Mr. M’Queen’s, an electrotyped copperplate, from which upwards of eight hundred impressions had been taken; and which was yet in condition to afford many more excellent prints. The subject is Hilton’s ‘Una,’ and it is intended for presentation to the subscribers of the London Art-Union. This is a very severe test for an electrotype plate, in consequence of the extreme depth of colour with which the composition is treated. On examining one of the last of eight hundred prints, which had been struck off one of these plates, the deep-toned masses were as perfect and transparent as in earlier impressions. We long since expressed a strong opinion in favour of the electrotype, as applied to Fine Arts; and thus it has succeeded in even a shorter time than might have been expected. Every difficulty has been surmounted, and such is the excellence of the factitious plate, that upon comparison it is in no wise distinguishable from the engraved original; and with respect to the prints, from each they are also of equal quality.

**SOCIETY OF BRITISH ARTISTS.**—As the success of a body of artists may be safely inferred to be the result of an extension and advancement of the public taste, of which it is a natural consequence, we rejoice at the improved report of the last year’s transactions of the Society of British Artists, terminating with the close of their late exhibition. The report is, of course, merely from the members forming the management, to the Society, the particular details of which we do not obtrude upon public attention; at the same time, we cannot but feel that (deriving their prosperity from the public, and the professional contributors to their annual exhibition,) it is, at least, an act of courtesy, to let the public and the profession know to what extent their support has benefited the Society. In the gallery of the Society there has always been effected a large annual sale of works. It is gratifying to have to report that the sales of this season have been considerably above three thousand pounds, about one thousand of which has fallen to the share of contributors unconnected with the Society; while the money received for admission, and from the sale of catalogues, has exceeded, by a very considerable sum, the funds derived from the same sources during preceding years.

**OLD LONDON WALL.**—Such of our readers as regard with interest the antiquities of our country, who see in them the handwriting, the impress, of a former age, and would preserve them as valuable evidence, will be glad to learn that the destruction of the remaining portion of London

Wall, concerning which we printed a letter in our last number, has been averted. In consequence of Mr. Godwin’s representation to the Institute of Architects, a memorial was presented by that body, jointly with the Society of Antiquaries, to the Church Building Society, praying them not to destroy the wall, and on the motion of Sir R. H. Inglis, it was unanimously resolved by the Society that the plan of the proposed church, to make room for which the site of the relic had been required, should be altered, and the wall preserved entire.

**ARTISTS’ GENERAL BENEVOLENT INSTITUTION.**—The annual report of this most excellent charity has been published. The amount received at “the dinner” was, it appears, £497 10s. 6d.; and sums to the amount of £772 have been distributed, chiefly among widows and daughters of artists; to some of them, indeed, sums have been allotted for the fourteenth or fifteenth time, and, in one instance, we perceive a “twenty-fourth donation” noted. There is one passage in the Report we feel bound to extract—for it is not very often that an attorney is a good Samaritan. “By expenses attending the obtaining the charter of incorporation, the honorary solicitor to the institution, H. Rice, Esq., having kindly offered his services gratuitously.”

**THE SIDDONS TESTIMONIAL.**—The duty of executing the monument to be erected in Westminster Abbey—a task infinitely too long postponed, and which never would have been discharged but for the active zeal of Mr. Macready—has been intrusted to the sculptor, Mr. Campbell. His design is very simple—the half-length figure, in alto-relievo, in a niche. It is, however, full of touching grace. The sum subscribed has been by no means large—under £500, we believe—so that, in undertaking the “commission,” Mr. Campbell has been guided by motives very opposite from the selfish. The amount will scarcely meet the cost of the marble, and the “workman’s wages.” We understand that, although no tenders were required, several sculptors expressed their willingness to undertake the work—without reference to the money that might be collected to pay for it; the Artists having had honourable and praiseworthy regard to the object contemplated, and feeling it to be worthy of any sacrifice to aid in honouring the memory of Mrs. Siddons.

**THE COUNCIL OF THE ROYAL ACADEMY** have obtained permission to place the fine fresco by Pellegrino Tibaldi, lately brought to this country, in the painting school of the Academy, in order that students who desire to make essays in the Art may have one of the most perfect specimens for study and comparison.

**LAWRENCE’S PORTRAIT OF MRS. SIDDONS.**—This full-length portrait has been added to the collection in the National Gallery, to which it has been presented by Mrs. Fitzhugh. It is placed in the room that contains Lawrence’s portrait of John Kemble as *Hamlet*.

**IN THE HOUSE OF COMMONS** some very important observations have been made by the Prime Minister, on a subject of vital importance to artists, and of deep interest to all who are associated with science and literature. On a vote of £1500 being proposed to defray the cost of monuments to the memories of the Admirals—Sydney Smith, De Saumarez, and Lord Exmouth—Mr. Hawes expressed a hope that “the naval and military professions would not be suffered to engross all the national monuments.” Upon which Sir Robert Peel said—“It was very desirable that in cases of very eminent scientific men, public monuments should be erected to their memory. He saw no reason why the country should pay that tribute only to distinguished naval and military men; on the contrary, it would be a great incentive to exertion in science if monuments were erected to the most eminent of her sons. He had given a good deal of consideration to this subject since it had been mentioned last year by the hon. member

for Lambeth. The first difficulty which struck him was as to the place where such monuments should be erected. There was a very great objection to placing them in ecclesiastical edifices, for unless the public had free access to them, no great public object would be attained. If they did not erect them in any edifice—if they erected them out of doors, it was almost necessary that they should be of bronze; then the expense would be enormous. He always hoped that there might be some portion of that great building which was now being erected for the Houses of Parliament that might be appropriated to the statues of eminent men, not merely of men of political character, but of persons distinguished in literature and science; and if he were assured that there could be any part of that edifice so appropriated, he should not have the slightest difficulty in referring the matter to the Commission which had been alluded to, and which had discharged its duty with the greatest credit. But it was a Commission appointed to consider the most proper method of decorating the Houses of Parliament; and if its duties were extended beyond the sphere assigned to it, the Commission might be made a general roving commission for the encouragement of the Fine Arts in this country. This was a matter requiring consideration, and he was not prepared at once to say that he was disposed to recommend that the Commission should undertake other duties than those which were originally contemplated for it. The site for the statue was the chief difficulty."

**BARONIAL HALLS OF ENGLAND.**—We beg to direct attention to an advertisement under this head—announcing the first part for publication on the 1st of October. The drawings are in litho-tint, by Mr. Harding; and they are at once so beautiful and so effective as completely to establish the repute of the new Art. The subject is one of universal interest. It will be our duty to make some further remarks upon the publication next month; meanwhile we refer it to artists who may desire to procure celebrity for localities comparatively little known, although rich in picturesque antiquities. Information concerning such remains Mr. Hall expresses his anxiety to obtain.

**ENGRAVED CARTOON PRIZES.**—We find we were in error in supposing that the engravings of the Cartoons were to be "in outline." Messrs. Longman have issued an announcement, stating that "they will not be in outline merely, but will, as nearly as possible, represent the Cartoons themselves." They add that the size of the engraving will be "on a scale of an inch and a half to the foot of the original." In whatever way they are executed we cordially wish them success; and shall rejoice to find the result of the experiment more satisfactory than we expect it to be. It is now said—but in this respect also rumour may be mistaken—that they are to be executed in lithography by Mr. Linnell. We hope this statement is incorrect—because we trust they will be rendered by a more auspicious material, and by an artist more capable of doing them justice.

**W. MULLER, Esq.**—This gentleman, who has established his claim to rank among the foremost of our British Artists, is on the eve of embarkation to join Mr. Fellowes, in Lycia. It is fortunate, indeed, that the expedition will have the services of so excellent a painter; who, to capabilities in Art, adds the advantages of an enlarged mind, an enterprising spirit, and acquisitions which belong to few.

**BRITISH MUSEUM.**—At length preparations have been actually commenced for setting about erecting the façade of this national edifice, which it is to be hoped will be such as to make full amends for the total absence of architectural pretension on the other sides of the exterior. It is, however, greatly to be apprehended that, unless the architect has thoroughly re-considered his design, and improved upon his first ideas,—

about a quarter of a century ago—it will not now be found to answer public expectation. Since the works by him at the British Museum were first commenced, a very great deal has been done in architecture almost all over the country. Consequently, the façade of the British Museum, will now have to sustain comparisons that, if unfavourable, must be doubly prejudicial, because it will come after worthier specimens, which it ought at least to rival, to be equal to, if not to surpass. We will say nothing of the new Houses of Parliament, they being so totally different in style, but there will be the noble portico of the new Royal Exchange, with its sculptured pediment, and the splendid Grecian façade, or rather façades of St. George's Hall, Liverpool, which will have no rival in the metropolis, unless it should be in that of the British Museum. The front of the Fitzwilliam Museum, at Cambridge, is also a noble and strikingly picturesque composition, of more than usually ornate character. Shall we be able to say as much of our national as of that provincial one? Hardly so, if, as we surmise, the style of the façade to the former will be of a piece with that of the elevations of the interior court, which are exceedingly frigid and meagre. We ought, perhaps, not to be so impertinent as to make any surmises at all; and, assuredly, there ought to be no room for doing so, because by this time, if not before, the public ought to have had some positive assurance afforded them of what they are to expect. Yet, if such assurance has not been given, neither has it been refused, since it has not even been demanded. And to what are we to ascribe the universal apathy manifested on this occasion? Is it that, because the British Museum is not in the Gothic style, and does not particularly interest Camdenists, Ecclesiologists, and Puginists, it is, therefore, matter of perfect indifference what be made of it? It is very true, architects cannot hope now to get a job out of it; but is it, therefore, no concern to any one what it will eventually turn out in itself? The exclusive admirers of Gothic architecture would, perhaps, not be at all sorry, should it turn out a complete failure, or, at all events, a very tame and namby-pamby affair; in which case, we shall be sure to have not a few injurious comparisons between the Museum and the Palace of Westminster, in which the Grecian style will be made responsible for whatever deficiencies may manifest themselves [in the design of the first-mentioned edifice. Accordingly, it behoves those who espouse the cause of Grecian architecture to bestir themselves a little in the case of the British Museum, and not tamely stand by, leaving it to take its chance for better or worse, without making some effort to secure for us a splendid—at any rate a satisfactory—example of classical design. Let us, on this occasion, endeavour to wipe away some of the reproaches which, as a nation, we have not undeservedly incurred; nor let it ever have to be said that the façade of the British Museum falls far short of those at Berlin and Munich.

**FOREIGN CONTRIBUTORS TO ENGLISH EXHIBITIONS.**—As we have reason to know that, in consequence of the purchase of M. Jacobi's picture by the Art-Union of London, for 200 guineas, several French and German artists intend sending pictures to our exhibitions in March and May next, it may be well to state that the committee of the Art-Union design to enact a law excluding from purchase the works of any except British artists. This rule is as necessary as it will be salutary; indeed, until very recently, we were under the impression not only that it did exist, but that it was—as it ought to have been—the foundation stone of the structure. If permission to buy foreign pictures were continued, we should have a ship load of them paying a nominal duty at our custom-house next spring; and our institutions here would be placed under the disagreeable necessity of seeming inhospitable, ungenerous, or unjust,

by refusing to receive them, or returning without exhibiting them.

**FRESCO BY EDWIN LANDSEER, R.A.**—Very many artists visited Gwydyr House early in the month, to examine a small example in fresco, executed by Edwin Landseer, R.A. It simply pictured a page holding a pair of horses, with a brace of dogs. No attempt at composition was made, the object being merely to exhibit the ease and freedom with which the (to us) new material may be worked upon. In this respect it was fully successful; there can be no doubt that any painter will easily master the difficulty after a little practice; and there can be no question that after a time Mr. Landseer himself will attach no value to this first effort, which he will, ere long, or we mistake not, greatly surpass, if, indeed, he deign to paint in fresco; for unquestionably the class of Art in which he excels, and has carried to the very verge of perfection, is not the class to be coveted where walls of public structures are to record national triumphs.

**PRINCIPLES AND PRACTICE OF ART.**—Mr. Harding's work, under this title, is in progress towards completion; it will correspond with, and be, indeed, the concluding volume of, the "Elementary Art," published some time ago, and the third edition of which is in preparation. But, in the present case, Mr. Harding, being enabled to avail himself of Mr. Hullmandel's invention of Lithotint, the work will very greatly surpass its predecessor in interest and value; besides, we expect, being of far higher importance in reference to the subjects treated of. The volume, as advertised by Messrs. Chapman and Hall, will contain twenty-seven or twenty-eight illustrative designs; several of these we have seen at Mr. Hullmandel's, and can, therefore, testify to their exceeding beauty, accuracy, and truth to nature. They will, indeed, completely establish the "New Art" in public favour.

**CARVING IN WOOD.**—There is in the possession of Mr. Rogers, of Great Newport-street, a collection of carvings in wood, ancient and modern, in every genre in which carving has been attempted. Many are by Grinling Gibbons—the subjects being, of course, flowers, fruits, dead game, &c.; such indeed are those of all English artists who have excelled in wood carving; success (as is universally the case) in one particular style having stimulated many to devote themselves to the same. English artists in wood cannot carve the figure: they are here surpassed by those of the Continent, to whom greater encouragement is given in this department, but the works of Gibbons and his followers have never been equalled in their class. We have seen at Antwerp, by Van Brughen, of Mechlin, some very spirited carvings; he, perhaps, alone of foreign artists has produced anything comparable to Gibbons in his own style. In the collection of Mr. Rogers are some rare and beautiful specimens of Gothic tracery, and other curiosities, dating even from the thirteenth century; also one or two small panels of grotesque design, by Giovanni da Udine, Raffaele's *arabesque*. Among the modern carvings we were much struck by portions of a very massive frame, intended for a large picture by Snyders. A principal object in the composition is a boar's head, life size, carved with infinite truth and freedom: it is profusely accompanied by other trophies of the chase, all cut in *alto-relievo* with unexampled skill. The excellence of this and other similar productions, which we had an opportunity of examining distinctly, arises from effort long directed into one narrow channel—intrusting particular portions only to those who, by their taste and feeling, have best qualified themselves for such especial parts of the composition.

**MIDLAND COUNTIES ART-UNION.**—This Art-Union, the central point of which is the prosperous town of Birmingham, promises to rank foremost among provincial societies. It is, indeed, almost certain of very great success; first, because the exhibition of works by modern artists

about to open will be of rare excellence; and next, because among its patrons, leading the nobility and gentry of the Midland Counties, are her Most Gracious Majesty and Prince Albert. We shall have other and better opportunities for referring to the plan and prospects of the Society. We refer to it now chiefly to direct attention to an advertisement which invites subscribers. The Midland Counties Art-Union is a sound and healthful Institution, the whole and sole object of which is to benefit British Art. It has been formed with judgment, and is conducted with energy and spirit.

**ART-UNION PRIZES EXHIBITION.**—This exhibition is, as we have elsewhere stated, now open. We refer to it chiefly as affording corroborative proof of the safety that now attends FREE EXHIBITIONS. Here we have a large influx of visitors of the middle class—no injury has been sustained by any of the works, nor has there been even inconvenience. At Westminster Hall, "the people"—that is to say, the lower classes—have entered literally "in shoals," by hundreds of thousands; no evil has arisen out of so glorious an experiment.

**OUT-OF-DOORS SKETCHING CLUB.**—This is a good notion; it opens up a fund of profitable enjoyment; and, as the summer is passing, fine weather and fair prospects should be made the best of. An advertisement in our paper last month pointed attention to the plan. We understand it has been successful, at all events as regards the pleasure and instruction to be derived from it. Mr. Harrison deserves much credit for enterprising perseverance in so far working it out.

**MUSEUM OF THE HERMITAGE, ST. PETERSBURG.**—On it being first of all rumoured that Klenze had been commissioned by the Emperor Nicholas to prepare designs for a Museum at St. Petersburg, the natural supposition was, that the building was to be an entirely new and distinct one, as was the case with the Glyptothek, and the Pinakothek at Munich, the reputation of which most probably led to the architect's being employed by the Russian sovereign. It now turns out, however, that the structure will not add to the number of the architectural monuments of St. Petersburg, as it is only a rebuilding and extension of the Hermitage Palace, in which the "Rafaele Gallery," so called from its being a facsimile imitation of the Loggie of the Vatican, is retained. Still, if description may be trusted, it is very greatly superior to what has been removed to make way for it; and though only an appendage to the Imperial Palace, it is in itself much larger than many palaces, the general plan forming a parallelogram of 520 by 380 feet, English measure, which is not very far short of the area of the whole of the quadrangle and buildings of the upper ward of Windsor Castle. The largest of the inner courts is 215 by 130 feet; the general height of the façades 74 feet, and that of the pavilions at the angles, 106 feet. In regard to the character of its details, the style of design is Greek, and it would seem the design itself is in some respects similar to the architect's idea for the Pantheon, at Athens, published in his "Entwürfe." Of the actual composition, however, it is impossible to speak from the verbal description given of it; for let the last be ever so correct as far as it goes, so many circumstances indispensably requisite to be understood, are passed over in it, that it is more tantalizing than satisfactory, leaving altogether doubtful some very material points. The *socle*, which is of reddish granite, is 11 feet high, and must therefore be of colossal proportions, and produce a most imposing effect, if it be really what the term applied to it imports—a solid substructure, in appearance at least, without windows of any sort. Nothing being said to the contrary, we are left to suppose that such is really the case; but it would have been far more satisfactory to have been distinctly assured of it, since it makes a most prodigious difference indeed whether it be so or not. Colossal must also be the effect of a mass, nearly the entire height of the Reform Club House, but with only two ranges of windows, reared on such a basement. This part of the structure is of greyish stone, with

some intermixture of reddish granite for the details, yet to what extent the latter is applied is not said; hardly at all, we should think, can it have been employed for any of the more delicate and enriched parts, and enrichment does not appear to have been at all spared, for we are told of arabesque panels, sculptured friezes, statues, some supported on consoles, others within niches, hermes-pillars, &c. &c. In short, the description makes magnificent promise to the ear; but whether the structure itself would keep such promise to the eye, is what we will not pledge for. Description is equally favourable to the interior, but equally perplexing also, being by far too indefinite; a vast deal of magnificence is spoken of—variegated marble columns, inlaid pavements of Grecian design, and other matters of that kind, but it is all shapeless. Almost the only part which we can figure to ourselves at all intelligibly is the grand staircase, 130 feet long, by 50 in breadth, with its twenty marble Corinthian columns, and three successive flights of marble steps (22 feet wide), ascending in a direct line. At any rate, in such a staircase there must be an air of extraordinary pomp. The rooms on the lower floor are intended for the reception of sculpture, vases, and miscellaneous antiquities; those above for a picture-gallery, distributed into a series of rooms, some very spacious, and lighted from above, as in the Munich Pinakothek, for larger pictures; others as cabinets, for smaller pictures, besides various loggies and corridors. The contents of the museum will be so arranged, that the apartments will have more the air of being decorated with them, as in a private palace, than of being the exhibition-rooms of a public museum, which sometimes give the idea of a bazaar, at others, of a charnel-house of art, stored with works, immortal, perhaps, in fame, but perishable, and even perished; interesting, but utterly illegible inscriptions, limbless statues, featureless busts, and pictures touched and retouched by time, till they have become only so many grim blackened canvasses, and melancholy memento-mori's.

Although the building was not begun until the Spring of 1842, the Museum of the Hermitage is expected to be completed by the end of the present summer, notwithstanding its great extent and the prodigious solidity of its constructions. In some places such an edifice would have been the work of a quarter of a century.

## REVIEWS.

### INTERIORS AND EXTERIORS IN VENICE.

Drawn by LAKE PRICE. Lithographed by JOSEPH NASH. Published by M<sup>r</sup> LEAN.

An imperial folio volume, containing a series of the richest and most beautiful subjects to be found in Venice. Every nook in this extraordinary place has been explored by the artist, and the amateur topographer; its high places have been celebrated in classic metres, and immortally sung in English epic and Spenserian; and in painting, the changes are rung out on its street and canal scenery. It is, however, matter of surprise that the regal and mysterious interiors of Venice have not received equal attention, at least from the artist: it may be that they have been overlooked in the engrossing magnificence of the external architecture. If it be so, let those who know not the "Sea Cybele"—who have never seen her either in painting or reality—look only at those gorgeous halls, and attempt to figure out in imagination something which could so far surpass them as to cause them to be overlooked. The *phantasma* might offer superior altitude and solidity, but never a place so curiously in unison with the character of its inhabitants, that they would seem to be indebted to it for their most prominent characteristics.

The first of these interiors is the Hall of the Ambassadors in the Ducal Palace, wherein the ambassadors of foreign states were marshalled in procession previous to introduction to the Venetian Senate. The ceiling was executed by Alessandro Vittoria, after designs by Palladio and Sanserina; the panels are enriched by pictures and frescoes by Titian and Tintoretto; and the whole in elaborate beauty excels all other decorated ceilings in the world. The shafts of the side columns are entire, and formed of oriental jasper.

Another is the 'Chamber of Caterina Cornaro, in the Palazzo Cornaro.' This lady was the wife

of Jacopo Lusignagno, King of Cyprus, after whose death the Palazzo Cornaro was allotted to her as a residence. The chamber looks on to the Grand Canal; the ceiling is divided into square compartments, in the centre of each of which is a pendant; on the walls hang some of those portraits, peculiarly Venetian, wherein we at once discern the grave and majestic Titian, the argumentative Giorgione, or the profound though florid Tintoretto. The whole of the appointments of the chamber are in perfect keeping, and to give life to the drawing there is seated at a table a figure whom we may suppose to be Catarina herself reading while tired by an attendant.

The 'Exterior Gallery round the Ducal Palace' looks a solitude—and is so, in fact, now, for its marble pavement is not even trodden by the curious stranger. The architecture is Gothic, with a strange dash of Moresque in the ceiling. The solitude of the place is even unrelieved by the presence of the Doge and his official followers: indeed, as observed of it, well might the Venetian of the thirteenth or fourteenth century give forth his lamentation of his "*caro amico morto da notte*"—the phrase *morto da notte* had then a signification which reduced its utterance to a significant whisper.

'Byron's Room' is not forgotten. It is in the Palazzo Mocenigo, as may be remembered, and remains in the same state as when he occupied it, and wrote in it part of "*Childe Harold*." In the magnificent frieze which runs round the room are painted the naval battles wherein members of the family of the Mocenigi have served. The walls are hung with cloth of gold, and pictures by Titian, Tintoretto, and Giorgione. A '*Venetian Conversazione, 1740*,' is held in an apartment which must have been furnished with a splendour unequalled even in the palaces of the most magnificent kings. It is an apartment in the residence of a "*virtuoso*" on the grand canal. The muster at the conversazione is as yet but thin; if the company were even more numerous, the interest excited by them is entirely superseded by that attaching to the exquisite pencilling everywhere profusely displayed in the carved work of the cabinet frames, and in the designs of the hangings of the room.

'Titian's Studio, Palazzo Barberigo,' is visited by all who go to Venice with any feeling capable of appreciating that for which the place is so celebrated. The figures in the plate represent Titian receiving a visit from some king or emperor; but the artist has placed the great painter and his easel in a position, with regard to the light, which, if left to himself, he never would have done. The studio is a large and lofty room, decorated in the cinquecento style, and said to remain in the state in which it was left by Titian himself. On the walls are still hanging the '*St. Sebastian*' on which he was engaged when, at the age of ninety-nine years, he was cut off by the plague. The '*Magdalene*,' '*Venus*,' and others of his works are said to hang in the same frames which they filled during his lifetime.

Besides the few we mention there are also views of '*St. Mark's* and the Piazzetta,' '*The Riva dei Schiavoni*,' the '*Convent of San Michele*,' and '*Island of Murano*,' '*Altar of the Virgin*,' '*St. Mark's*,' &c. &c., all studied under the best effect, and drawn with a masterly execution. With respect to the style of the lithography, it is admirably adapted to this kind of subject. The lithographer possesses in an eminent degree the power of describing the profuse richness of the carving and moulding with which these edifices are loaded; indeed, we know no other gentleman who could command equal success in this department of Art.

### PROPORTION, OR THE GEOMETRIC PRINCIPLE OF BEAUTY ANALYSED. BY D. R. HAY. Published by W. BLACKWOOD AND SONS.

That the uniform beauty of Greek composition is the result of a principle, cannot be doubted; were this not alluded to by ancient writers, it is sufficiently testified by antique remains, and is the more felt by us, that the problem is unsolved, so limiting us to blind imitation. The substance of Mr. Hay's theory goes to refute Burke's proposition, that "*proportion relates almost wholly to convenience*"—that beauty is entirely independent of it. We have ourselves long ago been struck with the incongruity of these passages of the "*Essay on the Sublime and Beautiful*" to which this writer alludes. To go no further than the

passages extracted, we shall endeavour to point out the discordance. "Proportion," says the quotation, "is the measure of relative quantity." Since all quantity is divisible, it is evident that every distinct part into which any quantity is divided must bear some relation to the other parts or to the whole. These relations give an origin to the idea of proportion. They are discovered by mensuration, and they are the objects of mathematical inquiry. But whether any part of any determinate quantity be a fourth, or a fifth, or a sixth, or a moiety of the whole; or whether it be of equal length with any other part, or double its length, or but one half, is a matter merely indifferent to the mind."

Proportion may be proximate, remote, or graduated between the extremes; but it cannot be conceived that the degree of proximity or remoteness can be wholly indifferent to the mind, which is readily reconciled to the contemplation of quantities graduated to a near relation, while the consideration of remote proportions, as contrary to natural principle, is repugnant to it. Proportion is independent of beauty, but beauty is not independent of proportion.

"Another principle," says Burke, "of beautiful objects is, that the line of their parts is continually varying its direction; but it varies it by a very insensible deviation: it never varies it so quickly as to surprise, or, by the sharpness of its angle, to cause any twitching or convulsion of the optic nerve."

This principle in the beauty of lines is the same as that which regulates the harmony of quantities, and that harmony of quantities is formal beauty. If beauty were independent of proportion, and proportion were indifferent to the mind, it would not detect the absence of any minor part of a figure otherwise perfect and beautiful. But, if accustomed to contemplate an object pleasing from its harmony of parts, an interruption of the agreeable relation could not be indifferent to the mind.

If, according to Burke, beauty had anything to do with correlative quantity, "we might then point out some certain measures which we could demonstrate to be beautiful, either as simply considered or as related to others."

"In despite," says the author of the work before us, "of so great an authority to the contrary, an attempt shall be made in the present essay to prove that beauty does depend upon calculation and geometry; and that, therefore, we can point out and demonstrate certain measures to be beautiful, either as simply considered, or as related to others."

We have always considered this discrepancy of the great author of the "Essay on the Sublime and Beautiful" to be rather constructive than literal. Those passages seem to point to class-beauty, the opposite of which Mr. Hay takes up, and sufficiently demonstrates its dependence upon geometry.

THE TRUE ENJOYMENT OF ANGLING. BY HENRY PHILLIPS, ESQ. Publisher, PICKERING.

So many of our artists are "brethren of the angle"—so many unite the pleasant pastime of old Isaac with the more profitable one of sketching—that we may look for thanks in introducing to them this delightful little book.

The name of Mr. Phillips is so intimately connected with song, with foot-lights, crowded houses, and clapping of hands, that we little expected to encounter him walking abroad with Nature, and joining heartily in every thing opposed to artificial existence.

The elegant volume before us comprises notices of the angling months—from March until September; varied information concerning the manufacture of appropriate flies; and each month is crowned by a song—such a song as anglers would delight to troll when the day's sport is ended, and they meet, full of harmless mirth, at some wayside and sheltered inn, to enjoy the repose so necessary after exertion. Judging from the pleasure expressed by two grave brothers of the angle while going through the book, we fancy there can be few greater treats than such companionship on a fishing excursion; and seven songs by a composer of such skill and feeling, must render it a curiosity and a favourite on every music-stand. The volume is enriched by an excellent likeness of this first of English singers, by J. P. Knight, A.R.A., engraved by H. E. Dawe.

LE CABINET DE L'AMATEUR ET DE L'ANTIQUAIRE. Paris, 37, Rue Notre Dame de Lo-retto.

This excellent periodical, now in its second year, is devoted to the antiquities and curiosities of Art. One of the numbers before us contains a very beautiful etching by Pernel, after Meissonier; it is simply a creditable member of the *bourgeoisie*, seated in the calm and absorbing enjoyment of his pipe: the title is "Le Fumeur." In another is a biographical notice of Bonington, whence we transcribe a memorable lesson given to the aspirant by his father. Pointing to fresh nature, he said:—"These are subjects for the pencil. Books and engravings can teach the student in Art but a small portion of that which he may learn in the school of nature: for in these all that we behold presents but one phase. But on the other hand nature is subject to continual change: trees have each day a new aspect, and on each succeeding day the mountain and the valley put on a new livery. The flower of to-day succeeds that of yesterday. See how the effect of light and shadow is affected as the wind rises or lulls—in proportion as the day is strengthening towards mid-day, or declining towards evening:—the bird's nest, which but a week ago consisted of but a little straw, is now a little dwelling cunningly suspended from the branch, and contains four spotted eggs and a brooding mother." Bonington listened attentively, and profited by these lessons.

THE ILLUMINATED MAGAZINE. Edited by DOUGLAS JERROLD.

We look at everything done by Kenny Meadows with a peculiar interest. His "Hermit of Belly-fulle" in this fourth number, is equal to the best things he has ever done—he forces upon us strongly the difference between the animal-man and the man-animal in this admirable figure. The simplest item of head or tail piece by this most prolific and felicitous illustrator, is a moral or a proverb; for instance, the "Folly of the Sword," an article by Jerrold, is powerfully prefaced by a sword, from the point of which blood is dripping; a hand grasps the hilt, and round the blade are entwined two serpents, bent on destroying each other. The tailpiece is "Death issuing from the cannon's mouth and speeding on the cannon ball." The illustration to "Dogs' Tales" is irresistibly ridiculous. When the club-mania arose it was resolved by some "loose dogs" about town to form what they called "the Canine Club," some of the members of which are here shown relating their tales. The inexhaustible fund of invention with which this artist is gifted, and his readiness in seizing on a point, are truly astonishing; his illustrations alone ought to command success in any work.

THE BOOK OF BRITISH BALLADS. Edited by S. C. HALL, ESQ., F.S.A. Published by J. How.

Six parts of this work, it may be remembered, have already appeared, forming the first volume; and we have pleasure in announcing its continuation, in the publication of the seventh part—containing "The Bonny Bairsns," with illustrations by E. Corbould, engraved by Bastin and Wakefield; "Glenfinlas," illustrated by H. J. Townsend, engraved by Nicholls, Branston, and Walsley; "The Gay Goss Hawk," with illustrations by J. Franklin, engraved by Armstrong; "Lucy and Colin," the drawings by E. M. Ward, engraved by Branston; "Catherine Johnstone and the Young Lochinvar," with drawings by C. H. Weigall, engraved by Landells.

The first of these ballads is taken from the "Songs of Scotland, Ancient and Modern," edited by Allan Cunningham, and is founded upon one of those popular legends which are traditionally sustained for centuries. Mr. Cunningham, as he himself says, "has ventured to arrange and eke out these remarkable verses"—inasmuch the beautiful composition may be said to be his own. The illustrations by Corbould are distinguished by infinite pathos. "Glenfinlas," by Sir Walter Scott, first appeared in "Tales of Wonder," edited by M. G. Lewis, and published in 1801. Glenfinlas is a track of forest land, lying in the Highlands of Perthshire, and the scene of the incidents on which the ballad is founded.

"The Gay Goss-Hawk" is an ancient ballad, the leading incident of which is the transmission of a letter under the wing of a hawk. "Colin and

Lucy" was written by Tickell, the friend of Addison, and printed by Bishop Percy in the "Reliques of Ancient English Poetry."

The ballad of "Katharine Janfarie," or, Catherine Johnstone, was first published in the "Minstrelsy of the Scottish Border," gathered, says the editor, "from several recited copies." The incidents and relation are strongly in the spirit of that formerly wild and lawless region.

#### TO CORRESPONDENTS.

We shall avail ourselves of the hint from Cambridge next month, when the purpose of the writer will be equally well answered, and we shall devote some space to provincial Art.

The suggestion of our Bolton correspondent is a good one; but the difficulty of transferring the cartoons to the provinces is very great; and we fear it would be impossible to find rooms in which to exhibit them.

We have received letters referring to the death of two remarkable men—Mr. W. H. Pyne, an artist and author, and the famous engraver Raimbach. The writers complain that of these eminent persons there has been no "memoir" in our pages. We have again and again expressed our regret at our inability to furnish such matters without assistance, and of the difficulty we find in procuring that assistance. Nevertheless, we hope soon to procure the information needed.

#### ROYAL COMMISSION OF FINE ARTS.

Whitehall, July 28, 1843.

Her Majesty's Commissioners having, in the notice issued by them in April 1842, announced their intention of adopting means to enable them to decide on the qualifications of candidates for employment in fresco-painting; having thereupon invited artists to send in cartoons as specimens of their practice in design and composition, and being of opinion that the exhibition of such cartoons, which has taken place, has afforded satisfactory evidence of the ability of many artists in these respects; in pursuance of the plan proposed as aforesaid, now give notice:—

1. That whereas it has been ascertained that frescoes of moderate dimensions can be conveniently executed on portable frames composed of laths or other materials, artists are invited to send specimens of such frescoes to be exhibited, for the purpose of assisting the Commissioners in the selection of persons to be employed in the decoration of portions of the Palace at Westminster.

2. The works are to be sent in the course of the first week in June 1844, to a place of exhibition hereafter to be appointed.

3. The number of specimens to be exhibited by each artist is limited to three. The size of the specimens is to be not less than three nor more than eight feet in their longest dimension. The figures or portions of figures, in at least one specimen by each exhibitor, are to be not less than the size of life. The subjects are left to the choice of the artists.

4. Each specimen is required to be composed of not less than two applications of the superficial mortar, so as to exhibit the skill of the artist in joining the work of two or more days.

5. Each exhibitor is at liberty to send a cartoon, as a specimen of his ability in design and composition, together with his specimen or specimens of fresco. The mode of execution, subjects, and dimensions of such cartoons are to be in accordance with the conditions specified on those points in the notice issued in April 1842.

6. No ornamental frames to the cartoons will be admissible, but each specimen in fresco may be surrounded by a flat frame or border, adorned with painted arabesques, which may be executed either by the artist himself or under his direction, and either in fresco or in any other method.

7. The competition hereby invited has for its object the execution of frescoes for the decoration of the Palace at Westminster. But whereas paintings executed in other methods may be free from a shining surface, and may therefore be considered by various artists to be fit for the decoration of walls, the Commissioners invite such artists to exhibit specimens of the methods in question, under the conditions before expressed, except that with regard to such specimens the dimensions are left to the choice of the exhibitors.

8. The claims of candidates for employment in oil-painting, and in other departments of the art besides historical painting, will be duly considered.

9. The invitation to send works for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

10. Artists who propose to exhibit are requested to signify their intention on or before the 15th of March, 1844, to the Secretary, who is empowered to give such further explanations as may be required relative to the terms of this and of the other notices issued by the Commissioners.

By command of the Commissioners,

C. L. EASTLAKE, Secretary.

On the 1st of October will be Published, to be continued every alternate month, the First Number of

## THE BARONIAL HALLS, PICTURESQUE EDIFICES,

AND  
ANCIENT CHURCHES OF ENGLAND.

FROM DRAWINGS MADE EXPRESSLY FOR THE WORK BY EMINENT ARTISTS.

The whole executed in Lithotint, by Mr. J. D. HARDING, with descriptive Letter-press, and Numerous Engravings on Wood.

EDITED BY S. C. HALL, F.S.A.

The revival of a taste for the style of Architecture and Interior Decoration that formerly distinguished England has induced a very general desire to become acquainted with the Remains of which the several counties of the kingdom retain many perfect examples.

These Old English Baronial Halls, Mansions, and Manor-houses, have at all times supplied abundant themes for the Artist. Pre-eminent in interest and pictorial beauty, they afford rare opportunities for combining the skill of the painter with records and descriptions of an interesting and important character; the history of these structures forming prominent and most eventful parts of the history of the Kingdom, and illustrating the lives of remarkable or illustrious Englishmen.

With the Houses emphatically styled "OLD HOUSES" are almost invariably associated Churches, pictorial in character, of venerable antiquity, and deeply interesting, as connected with the several families whose ancestors they entomb.

The Village Churches of England may indeed be classed among the most unchanged, as well as most peculiar, of its existing structures; yet they are little known beyond the localities in which, ages ago, they were built, although treasure-houses of the antiquarian—abounding in suggestions to the historian, and of rare value to the artist.

This work is designed to supply Pictorial Illustrations of these Baronial Halls—their picturesque accessories, and the venerable edifices associated with them; the Illustrations being accompanied by such notices, biographical, historical, and descriptive, as will best introduce these Old English memories of

"Altar, sword, and pen—  
Fire-side—the heroic wealth of Hall and Bower!"

Works of a similar character have been already received with great and deserved favour by the public; but owing to their costliness and size, they are necessarily confined to the libraries of the wealthy. The object of the proprietors of this work is to combine even superior beauty and accuracy with such a price as will place it within the reach of all; which, by a recent important invention in the Arts, and the zealous co-operation of an accomplished artist, they will be enabled to do.

### MODE OF PUBLICATION.

The size of the work will be imperial quarto; and its production will be in all respects commensurate with the importance of the subject and the advanced state of the graphic and typographic arts. Each Part will contain Three Subjects, executed in LITHOTINT—the patent invention of Mr. Hullmandel—a method peculiarly suited to such a publication, as combining accuracy of detail with brilliant artistic effects, and having also the advantage of novelty.

Woodcuts, when desirable to elucidate the text, or convey accurate ideas of striking details, will be scattered through the letter-press, which will consist of twelve pages—sufficient, it is believed, to furnish all necessary information to the general reader.

Prints, Imperial Quarto, Five Shillings. Proofs, Columnar Quarto, Seven Shillings and Sixpence. Proofs, Imperial Folio, to range with Nash's Mansions, and other works of the same size, Twelve Shillings.

LONDON: CHAPMAN AND HALL, 186, STRAND.

Edinburgh: J. MENZIES. Glasgow: A. RUTHERGLEN. Dublin: JOHN CUMMING.

### TO PAINTERS IN WATER COLOURS.

Just Published, price 1s.,

## THE HAND-BOOK OF WATER COLOURS.

By W. WINSOR and H. C. NEWTON,  
Artists' Colourmen to the Queen.

A brief treatise on the properties of every pigment employed in water-colour painting, with some account of the sources from whence they are obtained.

Tilt and Bogue, Fleet-street.

Deutsche Buchhandlung von BRAIN and PAYNE,  
London and Leipzig.

GERMAN GRAMMARS, DIALOGUES,  
DICTIONARIES, GUIDE-BOOKS, MAPS, &c.;  
German Works on Theology, Philosophy; the whole  
of the German Editions of the Greek and Latin Classics;  
and in all departments of German Literature, constantly on sale.

Brain and Payne, German Booksellers and Publishers,  
12, Paternoster-row.

Now ready, royal 8vo., price 4s. 6d.,

A MANUAL OF PERSPECTIVE,  
particularly adapted for the use of Amateurs, by  
J. WOOD, Jun. Second Edition, with Additions.

"A neat, clear, and concise explanation of the leading principles of perspective, as exemplified in familiar scenes and objects, forming a very serviceable introduction to the science."—*Spectator*.

"Its elucidation of the principles of the science is so clear and comprehensive as to facilitate greatly the studies of the young artist. The work is also beautifully printed and illustrated."—*Worcester Journal*.

Whittaker and Co., London; Wood and Son, Worcester.

This day is published, in royal quarto, with 17 Plates and 38 Woodcuts, price 25s.,

PROPORTION; or, the GEOMETRIC PRINCIPLE OF BEAUTY, ANALYSED. By D. R. HAY, Decorative Painter to the Queen, Edinburgh.

Lately published by the same Author.

The NATURAL PRINCIPLES and ANALOGY OF THE HARMONY OF FORM. In one vol. royal quarto, with 18 Engravings and Woodcuts. Price 15s.

II.

The LAWS OF HARMONIOUS COLOURING ADAPTED TO INTERIOR DECORATIONS. The Fourth Edition, with Eight Coloured Diagrams. Octavo. Price 7s.

William Blackwood and Sons, Edinburgh, and 22, Pall-mall, London.

CARTOONS.—All Materials used for Painting in Encaustic, or Peinture à la cire, as practised in Paris by Sigol, Abel de Pujol, Schnetz, Buchot, Léon Coignet, in the churches of the Madeleine, St. Roch, St. Louis d'Antin, &c., and also by Mr. Alaux, for the restoration of the fresco paintings at the Palace of Fontainebleau, may be had at C. BARBES 5, 60, Regent's-quadrant.

THE YORKSHIRE FIRE and LIFE INSURANCE COMPANY. Established at York, 1824, and Empowered by Act of Parliament. Capital, £500,000.

### PATRONS.

10	£1 7 6	£1 5 4
30	2 5 0	1 19 9
50	4 1 9	3 13 3
70	10 0 4	9 7 6
80		15 12 10

Fire Insurances are also effected by this Company, on the most moderate terms. Farming Stock Insured without the Average Clause.

Prospectuses with the Rates of Premium and every information may be had at the Head Office in York, or of any of the Agents.

Agents are wanted in those Towns where no appointments have been made.

HAMPTON COURT.—BOARD and LODGING for Single Gentlemen, at the King's Arms Hotel, Hampton Court, adjoining the Royal Gardens, at TWO GUINEAS per week, including attendance of every description.

Permission is given to copy in the Palace, on application to Lord Lincoln, Chief Commissioner of Woods and Forests, Whitehall-place.

### VALUABLE TO LANDSCAPE DRAUGHTSMEN.—THE PATENT LEAD SIX B DRAWING PENCIL,

remarkable for its depth of tone, richness of colour, and its freedom and firmness in working. Size of the Lead 1-6th of an inch in thickness.

Manufactured only by WINSOR and NEWTON, 38, Rathbone-place, London.

Artists and the Trade are respectfully informed that they can have a sample one sent per post to any part of the Kingdom.

### ART-UNION OF LONDON.—SUBSCRIBERS

are respectfully informed, they can be supplied with FRAMES of superior description for the Engraving, 'Una entering the Cottage,' at prices lower than by any other manufacturer in the Kingdom, by P. GARBANATI, Working Carver and Gilder, 19, St. Martin's-court, Leicester-square. For example—a rich, handsome, ornamented gilt frame, and best flatted glass, £2; a maple frame with gilt inside 8-inch moulding, and best flatted glass, £1 8s.; a gilt bead moulding frame and best flatted glass, £1.—A great variety of Frames on view.

### FRAMES FOR ART-UNION PRINTS,

&c.—C. F. BIELEFELD begs to call the attention of Artists, Printers, &c., to his numerous assortment of PICTURE-FRAMES appropriate for the Art-Union and other Prints; manufactured in his improved Papier Mâché.

"The specimens of these frames, which we have seen, are certainly very beautiful."—*Globe*, Jan. 17, 1843.

"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—*ART-UNION*.

C. F. B. has just published a new Tariff of his Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street North, Strand.

### SPLENDID AND SUPERIOR GILT FRAMES.

CHARLES M'LEAN, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the Kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All Goods taken back, not approved of in three months.

### NOTICE.—PATENT RELIEVO LEATHER

HANGINGS and CARTON-TOILE OFFICE, 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c. &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rampart, Paris.—May 25, 1842.

### POOLOO'S CHINESE CEMENT.—The

extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razor-makers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

## MILLER'S SILICA COLOURS.

The daily increasing patronage bestowed on these Colours by Artists of the first eminence, while it is gratifying in the highest degree to the inventor, is, at the same time, an acknowledgment of the soundness of those principles upon which they are manufactured. It will be sufficient to repeat that, being composed of substances identical or similar to those used by the old masters (the brilliancy of whose works, after the lapse of centuries, is an incontestable proof of the superiority of ancient colouring), the Silica Colours will ever retain their freshness, transparency, and gem-like lustre, uninjured by atmospheric influence and unimpaired by time.

### MILLER'S SILICA POWDER.

### MILLER'S GLASS MEDIUM FOR OIL PAINTING.

- No. 1. For first and second painting.
- No. 2. For third painting, finishing, and glazing.

### MILLER'S VENETIAN OIL.

### MILLER'S VENETIAN VARNISH.

### MILLER'S VENETIAN GROUND CANVASS.

### MILLER'S COLOURS FOR PAINTING ON GLASS.

### MILLER'S GLASS MEDIUM

### FOR WATER-COLOUR PAINTING.

- No. 1. For first colouring or laying on masses of colour.
- No. 2. For second colouring, glazing, and finishing.

### MILLER'S SKETCHING COLOURS.

### MILLER'S ANTHYDOR.

### FOR SKETCHING AND PAINTING.

### MILLER'S MINIATURE TABLETS.

### MILLER'S DRAWING-PAPER.

Made of pure linen only, without undergoing any chemical process.

### MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.

**TO WATER-COLOUR PAINTERS.**—MILLER'S SKETCHING COLOURS.—These Colours are prepared for the purpose of enabling the Artist or Amateur to depict at once the transient effects of clouds, distances, &c., and as they require no previous preparation by the Artist when using them, will be found of indispensable utility in all instances where objects of an evanescent character are to be portrayed.

MANUFACTORY, 56, LONG ACRE, LONDON.

## PERMANENT DRAWING CHALK, in various colours.

E. WOLFF and Son beg to apprise Artists and Amateurs that they have, by effecting great improvements in their CRETA LÆVIS, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

FOR SKETCHING FROM NATURE, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The CRETA LÆVIS will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers', where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

### INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF and SON beg to recommend their newly-invented SKETCHING PENCILS, or PERMANENT BLACK CHALKS.

B B Very Black, for foreground.

H B Middle Tint.

N Neutral Tint, for distance.

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

\*.\* The method of using the Creta Lævis is taught by Mr. W. H. Kearney, member of the New Water-Colour Society.

Manufactory, 23, Church-street, Spitalfields.

**ART-UNION.**—Twenty SHARES in the ART-UNION, and Six OIL PAINTINGS, framed, will be presented to any one who shall procure an intelligent and genteel Young Man a permanent Appointment.—Address, "Mr. Charles M. Day, 6, Warwick-court, Gray's Inn. (Private)."

### TO WATER COLOUR PAINTERS.

**SOLUBLE WAFER COLOURS.**—WINSOR and NEWTON beg to call the attention of the Profession to the advantages offered by these new WATER COLOURS. They are formed into flat Cakes, or Wafers, which, by wetting the under side, are made to adhere to the china palette, or sketch box. The diameter of these wafers is 1½ inch, and thus by presenting a broad surface for the action of the brush, a fulness of colour, so desirable where force is required, is readily obtained.

The method of preparing these Colours is also founded on an entirely new principle, by which the finer and more soluble particles of the colour only are employed, giving them the property of flowing well in the flat tints, and working with great freedom and richness in the darker touches.

Sold in Sets of 12 Colours, including Lake and Cobalt, 7s. per set; 18 Colours, ditto, 10s.; or single, at half the prices of the usual cake colours.

Japanned Boxes for the Wafer Colours, very thin and portable, to contain either 8, 10, 12, or 16 colours.

WINSOR and NEWTON, Artists' Colour Makers to her Majesty and to H. R. H. Prince Albert.

Wholesale and retail, at 38, Rathbone-place, London. May be had also of the principal Booksellers and Artists' Colourmen in the provincial towns.

**PICTURE-FRAMES, CHIMNEY GLASSES, CONSOLE TABLES,** and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regit, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the Kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

## DIMES AND ELAM, ARTISTS' COLOURMEN, FANCY STATIONERS,

AND MANUFACTURERS OF EVERY MATERIAL FOR

### DRAWING AND PAINTING,

91, GREAT RUSSELL-STREET, BLOOMSBURY-SQUARE, LONDON.

### DIMES AND ELAM'S CANVAS PREPARED WITH INDIA RUBBER GROUND.

(FOR OIL-PAINTING.)

This Canvas, prepared with a ground of solution of India Rubber, is confidently recommended to the notice of the profession, its eligibility having been thoroughly acknowledged, and having received the patronage of the first Artists in the kingdom. To those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the Art.) this Canvas is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to paint on. Prepared of any dimensions, with or without Frames.

### SUPERFINE WATER COLOURS.

D. and E. beg to offer their Colours to the notice of the Amateur and Artist; being prepared in the purest and most careful manner, they will be found to possess freedom in working, together with brilliancy of colour, and are warranted not to contain any deleterious matter, being made of the finest colours to be obtained.

### MOIST WATER COLOURS.

All the Colours are kept prepared in the moist state in thin Porcelain pans, and will be found to be extremely soluble and retain their permanency, drying firm and free from clamminess on the paper.

Water Colours in Boxes, from 3s. 6d. to £10 10s.

Miniature Desks.

Japan Sketch Boxes, to hold 6, 8, 10, 12, 16, 18, or 20 Moist or Cake Colours.

A MONTHLY JOURNAL OF THE FINE ARTS.

No. 58.

LONDON: OCTOBER 1, 1843.

PRICE 1s.

THIS JOURNAL BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

**THE GOVERNMENT SCHOOL OF DESIGN**, Somerset House, will RE-OPEN on MONDAY next, the 2nd of OCTOBER.

**ART-UNION OF LONDON**, 4, TRAFALGAR-SQUARE.

President—H.R.H. the Duke of CAMBRIDGE.  
Vice-President—The Most Noble the Marquis of NORTHAMPTON, P.R.S.

Subscribers of the current year will receive for each guinea paid, in addition to the chance of obtaining a valuable work of Art, an impression of a Line Engraving, by Mr. E. GOODALL, from the picture by CLARKSON STANFIELD, R.A., "Castello d'Ischia," and a series of Twenty-two Designs in Outline, engraved by Mr. HENRY MOSES, from original Drawings, made expressly for the Society, by Mr. H. C. SELIGS, illustrative of the "Pilgrim's Progress." Several of the Outlines are already engraved, and the Committee invite an immediate subscription, to enable them to make the necessary arrangements for their prompt distribution.

The Engraving from HILTON's 'Una entering the Cottage,' due to the Subscribers of 1842, may now be obtained at the Office, on presentation of the printed Order, by those who have not already received it.

GEORGE GODWIN, F.R.S., F.S.A., } Hon. Secs.  
LEWIS POCOCK, F.S.A., }  
Sept. 26, 1843.

**TO ENGRAVERS.**—The COMMITTEE of the ART-UNION OF LONDON invite Engravers to send them Proposals for executing in Line a Copperplate ENGRAVING of Mr. O'NEIL's picture, 'JEPHTHA'S DAUGHTER,' of the size of 23 in. by 18 in., to be completed by January 1846. Specimens to be sent in with the Tenders on Monday the 9th of October. The Committee reserve to themselves the selection of the Engraver whose character and talents are most likely to insure the execution of a work of Art honourable to the Fine Arts of the country and creditable to the Society. The Picture may be seen at the Office, No. 4, Trafalgar-square, between the hours of ten and four.

GEORGE GODWIN, F.R.S., F.S.A., } Hon. Secs.  
LEWIS POCOCK, F.S.A., }  
Sept. 26, 1843.

**ROYAL MANCHESTER INSTITUTION.**

EXHIBITION OF MODERN PAINTINGS, ENGRAVINGS, SCULPTURE, &c.—Artists are respectfully informed that the Exhibition WILL CLOSE on SATURDAY, the 14th OCTOBER; as soon after which date as possible such Works as may not have been disposed of will be duly forwarded.

T. W. WINSTANLEY, Hon. Sec.

**TO ART-UNIONS.**—The Advertiser is terminating a PLATE in the LINE manner, which is to be DISPOSED OF. The subject is very interesting and of great beauty of Design. Size, 16 in. by 12 in.

Address by letter B. W.; or, inquiries made at Taylor's Library, No. 63, Edgeware-road.

**TO DRAFTSMEN.**—Immediate and profitable EMPLOYMENT may be obtained by clever Draftsmen, capable of getting up original DESIGNS, suitable for superior Book Illustrations, by applying, with Specimens, any morning between nine and ten o'clock, to E. Palmer, 103, Newgate-street, London.

**FOR SALE**—the following ORIGINAL PAINTINGS:—'Six Views in the Environs of Rome,' painted by Cesar Vanloo for the Princess of Salm Salm; 'The Descent of the Tongues,' by Lucas, of Leyden; 'Silenus teaching Cupid Music,' by Jordana. Also, a genuine Antique Cameo, representing 'Ajax forcing Cassandra from the Altar.'—Apply to Mr. Rich, 12, Red Lion square, Holborn.

**MR. G. H. HARRISON**, in thanking his friends and pupils for their attendance at his SKETCHING CLASS, begs to announce that he will be happy to meet them on the Winter Saturday Evenings, from Seven until Ten o'clock, to Draw from Models, adapted to the Landscape Sketches made during the Summer.—Further particulars at his residence, 15, Foley-place, Portland-place.

**NOTICE TO PAINTERS, SCULPTORS, and ENGRAVERS.**—The ATELIER, 14, Upper St. Martin's-lane, for the study of LIVING MODELS, will RE-OPEN on MONDAY EVENING NEXT, being the first Monday in October; the studies commence at six o'clock. Artists or amateurs desirous of becoming members, are requested to address a note to the Curator, at the Atelier.

W. B. SANSFIELD TAYLOR, Curator.  
September 25, 1843.

**RAFFAELLE'S CARTOONS FOR SALE.** By PUBLIC AUCTION (without reserve), within the STRAITON GALLERY, WEMYSS PLACE, EDINBURGH, on Friday the 13th of October, 1843.

The well-known Copies, by Sir JAMES THORNHILL, of the Celebrated CARTOONS by RAFFAELLE, now in the Gallery at Hampton Court. These much-admired Paintings embrace the following subjects:—

1. Paul Preaching at Athens.
2. The Death of Ananias.
3. Elymas, the Sorcerer, Struck with Blindness.
4. Christ Delivering the Keys to St. Peter.
5. The Sacrifice at Lystra.
6. The Apostles Healing in the Temple.
7. The Miraculous Draught of Fishes.

In addition to the above, there will also be sold:—1. Painting by Velasquez, of 'Rebecca at the Well,' from the late Lord Eldon's collection. 2. 'The Crucifixion,' by Vandyck. And 3. 'Christ at the Pool of Bethesda,' by Lanfranco.

The whole of these Paintings are now in the Straiton Gallery, Wemyss-place, Edinburgh, and may be seen by orders, to be received on application to Messrs. Todd and Romanes, W.S., No. 7, Great Stuart-street, Edinburgh; by whom also further particulars will be given.

**PICTURE-FRAMES, CHIMNEY GLASSES,**

CONSOLE TABLES, and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work repait, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

For FIRE and LIFE INSURANCE and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES. Capital, ONE MILLION STERLING; the whole paid up and invested, and entirely independent of the amount of premiums received.

Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.

Fire Policies due at Michaelmas, must be paid on or before the 14th of October.

By order of the Board,  
**JOHN CHARLES DENHAM, Sec.**

**DISEASED AND HEALTHY LIVES ASSURED. MEDICAL, INVALID AND GENERAL LIFE OFFICE, 25, PALL MALL, LONDON.—CAPITAL, £500,000.**—This Office is provided with very accurately-constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.

The Extra Premium discontinued on restoration of the Assured to permanent health.

Increased Annuities granted on unsound Lives, the amount varying with the particular disease.

Members of Consumptive Families assured at Equitable Rates.

Healthy Lives are Assured at lower rates than at most other offices.

Policies of twelve months' standing are not affected by Suicide, Duelling, &c.; and Assigned Policies are valid from the date of the Policy, should death ensue from any of these causes.

Loans granted on Personal Security.

**F. G. P. NELSON, Actuary.**

**HAMPTON COURT.—BOARD AND LODGING** for Single Gentlemen, at the King's Arms Hotel, Hampton Court, adjoining the Royal Gardens, at TWO GUINEAS per week, including attendance of every description.

Permission is given to copy in the Palace, on application to Lord Lincoln, Chief Commissioner of Woods and Forests, Whitehall-place.

**FRAMES FOR ART-UNION PRINTS, &c.**—C. F. BIELEFELD begs to call the attention of Artists, Printers, &c., to his numerous assortment of PICTURE-FRAMES appropriate for the Art-Union and other Prints; manufactured in his improved Papier Maché.

"The specimens of these frames, which we have seen, are certainly very beautiful."—Globe, Jan. 17, 1843.

"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

C. F. B. has just published a new Tariff of his Papier Maché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street North, Strand.

**SPLENDID AND SUPERIOR GILT FRAMES.**

**CHARLES M'LEAN, 78, Fleet-street** (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and re-gilt.

An extensive Stock kept seasoned for immediate delivery.—All Goods taken back, not approved of in three months.

The beautiful print of 'Una entering the Cottage,' framed from 8s. and upwards.

**THE PARISIAN DETERGENTS** render OLD GILDING, LACQUER, and BRONZE, however faded, dirty, or tarnished, equal to new. The effect is sudden, astonishing, and lasting; trouble merely sponging the surface, and expense only a few pence for a large Gilt Frame. Fly-spots are at once removed from Gilding; no necessity, therefore, to cover from the fly. Gold Detergent, 2s. 6d. per bottle; Lacquer and Bronze, 1s. 6d.; Lamp (interior), 1s. 4d. All are innoxious and inoffensive. These Detergents rank with the most valuable chemical discoveries.

Sold by UPTON and Co. (sole proprietors), Lamp Manufacturers, 33, George-street, Hanover-square, and 65, Basinghall-street, City.

N.B. A trial free of charge.—The trade supplied.

**ART-UNION OF LONDON.—SUBSCRIBERS** are respectfully informed, they can be supplied with FRAMES of superior description for the Engraving, 'Una entering the Cottage,' at prices lower than by any other manufacturer in the Kingdom, by P. GARBANATI, Working Carver and Gilder, 19, St. Martin's-court, Leicester-square. For example—a rich, handsome, ornamented gilt frame, and best flatted glass, £2; a maple frame with gilt inside 2-inch moulding, and best flatted glass, £1 8s.; a gilt bead moulding frame and best flatted glass, £1.—A great variety of Frames on view.

**ROYAL COMMISSION OF FINE ARTS.** Whitehall, July 28, 1843.

Her Majesty's Commissioners having, in the notice issued by them in April 1842, announced their intention of adopting means to enable them to decide on the qualifications of candidates for employment in fresco-painting; having thereupon invited artists to send in cartoons as specimens of their practice in design and composition, and being of opinion that the exhibition of such cartoons, which has taken place, has afforded satisfactory evidence of the ability of many artists in these respects; in pursuance of the plan proposed as aforesaid, now give notice:—

1. That whereas it has been ascertained that frescoes of moderate dimensions can be conveniently executed on portable frames composed of laths or other materials, artists are invited to send specimens of such frescoes to be exhibited, for the purpose of assisting the Commissioners in the selection of persons to be employed in the decoration of portions of the Palace at Westminster.

2. The works are to be sent in the course of the first week in June 1844, to a place of exhibition hereafter to be appointed.

3. The number of specimens to be exhibited by each artist is limited to three. The size of the specimens is to be not less than three nor more than eight feet in their longest dimension. The figures or portions of figures, in at least one specimen by each exhibitor, are to be not less than the size of life. The subjects are left to the choice of the artists.

4. Each specimen is required to be composed of not less than two applications of the superficial mortar, so as to exhibit the skill of the artist in joining the work of two or more days.

5. Each exhibitor is at liberty to send a cartoon, as a specimen of his ability in design and composition, together with his specimen of specimens of fresco. The mode of execution, subjects, and dimensions of such cartoons are to be in accordance with the conditions specified on those points in the notice issued in April 1842.

6. No ornamental frames to the cartoons will be admissible, but each specimen in fresco may be surrounded by a flat frame or border, adorned with painted arabesques, which may be executed either by the artist himself or under his direction, and either in fresco or in any other method.

7. The competition hereby invited has for its object the execution of frescoes for the decoration of the Palace at Westminster. But whereas paintings executed in other methods may be free from a shining surface, and may therefore be considered by various artists to be fit for the decoration of walls, the Commissioners invite such artists to exhibit specimens of the methods in question, under the conditions before expressed, except that with regard to such specimens the dimensions are left to the choice of the exhibitors.

8. The claims of candidates for employment in oil-painting, and in other departments of the art besides historical painting, will be duly considered.

9. The invitation to send works for the proposed exhibition is confined to British artists, including foreigners who may have resided ten years or upwards in the United Kingdom.

10. Artists who propose to exhibit are requested to signify their intention on or before the 15th of March, 1844, to the Secretary, who is empowered to give such further explanations as may be required relative to the terms of this and of the other notices issued by the Commissioners.

By command of the Commissioners,  
**C. L. EASTLAKE, Secretary.**

**NOTICE.—PATENT RELIEVO LEATHER HANGINGS AND CARTON-TOILE OFFICE,** 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Follage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c. &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

**L. COMETTI and CO., 10, Rue Basse du Rampart, Paris.—May 25, 1842.**

## MILLER'S SILICA COLOURS.

**MILLER'S SILICA POWDER.**  
**MILLER'S GLASS MEDIUM**  
**FOR OIL PAINTING.**

No. 1. For first and second painting.  
 No. 2. For third painting, finishing, and glazing.

**MILLER'S VENETIAN OIL.**  
**MILLER'S VENETIAN VARNISH.**  
**MILLER'S VENETIAN GROUND CANVASS.**  
**MILLER'S COLOURS FOR PAINTING ON GLASS.**  
**MILLER'S GLASS MEDIUM**  
**FOR WATER-COLOUR PAINTING.**

No. 1. For first colouring or laying on masses of colour.  
 No. 2. For second colouring, glazing, and finishing.

**MILLER'S SKETCHING COLOURS.**  
**MILLER'S ANTHYDOR,**  
**FOR SKETCHING AND PAINTING.**  
**MILLER'S MINIATURE TABLETS.**  
**MILLER'S DRAWING-PAPER,**

Made of pure linen only, without undergoing any chemical process.

**MILLER'S PREPARATION FOR CLEANING AND RESTORING OIL PAINTINGS.**

**MILLER'S VENETIAN OIL.**—Pictures painted entirely with this Oil, upon being submitted to the action of the blowpipe, will vitrify, showing they possess the properties described as belonging to Venetian Pictures when put to the same test.

If a picture should become dull from the action of the atmosphere, or be covered with a bloom, through the use of indifferent varnish, by washing it with cold water, and then applying a little of the above Oil with an old silk handkerchief, it will entirely remove the bloom, and bring out the colours in all their original lustre.

All the ordinary colours, as well as the extras, kept ready prepared in the above Oil at

**MILLER'S ARTISTS' COLOUR MANUFACTORY,**  
 55, Long Acre, London.

## PERMANENT DRAWING CHALK,

in various colours.

**E. WOLFF and Son** beg to apprise Artists and Amateurs that they have, by effecting great improvements in their Creta LEVIS, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

**FOR SKETCHING FROM NATURE,** the great advantages resulting from the adoption of the Creta LEVIS must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The Creta LEVIS will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers', where the Creta LEVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

### INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the Creta LEVIS.

**WOLFF and SON** beg to recommend their newly-invented SKETCHING PENCILS, or PERMANENT BLACK CHALKS.

**B B Very Black, for foreground.**  
**H B Middle Tint.**  
**N Neutral Tint, for distance.**

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

\*.\* The method of using the Creta Levis is taught by Mr. W. H. Kearney, member of the New Water-Colour Society.

Manufactory, 23, Church-street, Spitalfields.

## NOTES ON BRITISH COSTUME.

## PART THE FIFTH.\*

BY FREDERICK W. FAIRHOLT.

## THE TUDORS.

CLERICAL costume during the reign of Henry VII., who was a good Catholic and a liberal benefactor to his church, remained exactly as it has already been described in our previous notices. The church, unused to the fluctuations of fashion, richly endowed, and firmly established, admitted of no change in a costume which it had adopted with a mystic reference to its tenets; and to which it added nothing but splendour of decoration as it increased in wealth and power. During the early part of the reign of his son and successor, while Wolsey retained his ascendancy, it even increased in power, the clergy holding, in most instances, the most influential offices in the state, whether at home or abroad, as councillors or ambassadors. Perhaps at no period of its history in this country did it enjoy more temporal advantages than on the eve of its fall. The progress of the opinions of the followers of Wickliff and the other early reformers served but to increase its power, and the murmurs of irreverence and opposition (which were sometimes forced from good Catholics) offered a pretext for the rigorous exercise of laws against heresy—precluding all liberty of thought and expression of private opinion; and placing the lives of all who dissented from its tenets at its disposal. The death of Wolsey was the death of this power, which was undermined by the actions of those who wielded it. Their love of secular fashions and amusements when abroad, contributed in no mean degree to break down the barriers of ex-

\* Continued from page 187.

clusiveness they so evidently wished to preserve; and increased the complaints against their luxury in apparel which had been heard since the days of Chaucer; and had by this time forced itself on the notice of the superiors of the church, who, in a synod or council of the province of Canterbury held in St. Paul's in February 1487, condemned their imitation of the laity in their dress when not absolutely officiating, and allowing their hair to grow so long as to completely conceal the tonsure. This censure of the convocation was followed by a pastoral letter of the primate, in which the clergy were solemnly charged not to wear liriipes, or hoods, of silk, nor gowns open in front, nor embroidered girdles, *nor daggers*, and to keep their hair always so short that everybody might see their ears.\*

The Reformation produced a change in the costume of the clergy, and deprived it of its symbolical meaning and consequent form, discarding all that was peculiarly the feature of the Church of Rome. This change would appear, however, to have gone on gradually with the rejection of the many observances and ceremonies held by that church; from an examination of the little that remains to us, by which we may endeavour to fix the alterations of a fluctuating period. The woodcut title-page to Cranmer's Bible, printed in 1539, which is said to be designed by Holbein, and is an excellent authority for the costume of the period, in one of its divisions depicts Henry on his throne giving these Bibles to Cranmer and Cromwell for distribution among the people. Cranmer, and his two attendant chaplains, are habited in long white gowns to the feet, over which are worn plain white surplices reaching to the calf of the leg, and having full sleeves; a black scarf (apparently adapted from the stole) gathered in folds round the neck, hanging down at each side of the breast, and reaching a little below the waist. The portrait of Cranmer in the British Museum may be cited as a good example of the costume of a church dignitary at this period, as well as the not uncommon portraits of the reformers of his time, one of which has been selected as a fair sample of the rest. It is copied

from a rare portrait by J. Savage, of Hugh Latimer, who was burned 16th of October, 1555. And the portrait is at once characteristic of the man and the scholar. He wears upon his head a cap which would appear to have been a great favourite with the learned in general, for we constantly find them in portraits of clerical characters and students. The flaps fall round the neck, and are fixed over the eyes in front, although they most commonly appear without this flap over the forehead and spread above it much like the "city flat-cap" already described. A close cas-

\* Wilkins, Concilia.

sock of dark stuff envelops the body, and it is open in front, displaying at the neck the edge of the shirt beneath, which in other portraits is more distinctly shown,\* with its embroidered edge and narrow falling collar. A leather girdle encircles the waist, at which hangs a book bound expressly for a scholar's use, the leather covering being allowed to hang some length beyond the boards which it covered, when it was gathered in a knot or ball, which, being tucked under the girdle, allowed of convenient carriage and constant reference at all suitable opportunities. On his breast repose his spectacles, which at this period were of large size, and rested upon the cheeks and nose, without any side-bars to secure them to the sides of the head. He wears also a full black gown open from the shoulders, and having wide white sleeves with black cuffs, much resembling in everything, but ruffles at the wrist, the gowns still worn by our bishops.

The group of figures here engraved are selected from the drawing of the funeral procession of Queen Elizabeth, believed to be by the hand of William Camden, the great antiquary, and engraved in the third volume of the "Vetusta Monumenta." They represent the gentlemen of the Queen's chapel, and are curious inasmuch as they exhibit a strange mixture of Popish, Protestant, and secular costume. Thus they wear the white gowns and surplices of the Protestant Church beneath the richly embroidered cope of the Catholic one, with its border of canopied saints, modified in one instance by a row of Tudor badges, the portcullis, rose, lion, &c. The secular portion of the dress contrasting strangely with all this, and crowning all with the fashionable ruffs and hats of the day, which had already over-excited the ire of good master Philip Stubbs!

The costume of the legal functionaries during the early part of the present period may be seen in the above engraving, copied from the very curious painted table formerly kept in the King's

\* That of John Jewel, Bishop of Salisbury, who died 1572, may be cited as an example.

Exchequer, and which recorded the standard of weights and measures, as fixed in the twelfth year of the reign of Henry VII. These gentlemen wear close caps or coifs of very ancient form, similar ones being frequently seen in illuminations of the time of Edward I. One of them wears a tippet edged with fur; the shoulders of the other is enveloped in a hood, which displays its interior lining. Their gowns are capacious, and are open at the sides only, and are lined with furs throughout. This curious table was copied and engraved by the Society of Antiquaries, and is published in the first volume of their "Vetusta Monumenta," where may also be seen another curious picture, representing the court of wards and livery in full council assembled, and in the act of adjudicating; the lawyers wearing similar coifs to the two engraved above, but otherwise varying in their costume. The picture is supposed to have been executed about 1585, and accurately displays the legal dress as worn about the end of the period of which we are now treating.

Holbein's picture of 'Henry VIII. giving the Charter for Bridewell Hospital to the Mayor and Aldermen,' may be cited as a good authority for the costume of civic functionaries at this period; and the portrait of Sir Robert Bowes, Master of the Rolls, who stands on the King's left, may afford an intermediate authority for legal costume to those already cited. The same artist's great picture of 'Henry VIII. granting a Charter to the Barber-surgeons,' still preserved by that body in their hall, in Monkwell-street (a painting that richly deserves a pilgrimage from all lovers of Holbein and his art), will also afford material for the costume of the "Gentlemen of the Faculty," during the reign of the burly King.

The variation of form that the armour of the English knight underwent during the period of which we now speak, may be best understood by carrying it on from the last engraved specimen in these notes, that of the Earl of Warwick (p. 107). The effigy above given is that of Sir Thomas Peyton, in Isleham Church, Cambridge-shire. He died during the short reign of Richard III., about a year before the accession of Henry VII., but so short a period anterior to that of which we are treating, that his effigy may be given as a good example of the armour of the early part of the reign of Henry VII. The plate-armour of this period had assumed its most grotesque form, visible in the enormous fan-like elbow-pieces worn by Sir Thomas. Large ribbed pauldrons cover the shoulders, varying from those

worn by the Earl of Warwick in being so ribbed as if they were formed of overlapping pieces of moveable plate. The breastplate is globular and narrow at the waist, which generally appears to have been pretty tightly confined. The richly-ornamented girdles are discarded, and the sword generally hangs in front, a peculiarity distinctive of this period; the dagger retaining its place at the side. *Taces*, or *tassels* hung around the hips, from the lower edge of the breastplate, in the form of encircling rows of steel flaps, generally secured at the sides by buckles and straps, appended to which by the same security were the *garde-de-reins*, which covered the back from the waist behind. Over the thighs, hung the *tuilles* or *tuillettes*, which were secured to the lower edge of the *tassels* by buckled straps, and which are very clearly seen on the effigy above engraved. *Cuisses* covered the thighs, and *jambes* the legs; the *genouillères*, or knee coverings, spreading on the outer side of each knee into the shape of esclop shells; the *sollerets*, or steel shoes, being formed of flexible overlapping plates of steel, to which the spurs were rivetted, or secured by straps. Sir Thomas wears his hair close cropped round the head above the ears, and wears neither moustache, beard, nor whisker, such being the usual fashion of the day.

During the tournament the knight generally wore additional pieces of armour for the defence of the neck and breast. These were the *volante-piece*, which covered the lower part of the helmet; the *mentonnière*, a similar defence for the chin, which was also worn over the helmet, the lower part of which it covered as well as the neck; and the *grande-garde*, a large piece of plate-armour which covered the left shoulder and breast, and was fastened upon the breastplate by screws.

During the reign of Henry VII. the armour became richly decorated and fluted, and the tabard embroidered with the arms of the knight, was generally dispensed with, in order that the beauty of its decoration should be seen and appreciated. Plates called *pass-gardes* were affixed to the shoulders, rising from them perpendicularly at the sides of the head to guard the neck from the thrust of a lance, and turn its point when directed there. The toes of the *sollerets* were generally broad, following, as usual, the fashion of the shoes then generally worn. The helmets took the form of the head, having frequently flexible overlapping plates of steel that protected and covered the neck; these helmets were termed *burgonets*, as they were invented in Burgundy; one of these forms fig. 1 of the selection

here engraved. It partakes a great deal of the character of the singular one worn during the reign of Richard II.\* A serrated ridge stands up from its summit, the plume of feathers that arose from the apex of the helmet previously, being exchanged for a long flowing plume that was inserted in the pipe affixed to the back of the helmet, and streamed down the back of the

\* See the cut, part 3., p. 34., fig. 1.

wearer to the waist, or lower. Fig. 2 is a *burgonet* of a simpler form, which very clearly shows the conveniences adopted for seeing and breathing.

The military costume of Henry VIII.'s reign may be seen by referring to the plates in the first volume of the "Vetusta Monumenta," where is engraved the Roll in the College of Arms that depicts the procession and tournament held at Westminster in 1510, the first year of the reign of Henry VIII., in honour of Queen Katharine, upon the birth of their infant son Prince Henry. The paintings at Hampton Court of Henry's embarkation at Dover, the meeting of him and Francis I. in the Field of the Cloth of Gold; the meeting of Henry and Maximilian; and the Battle of the Spurs; will abundantly supply authority for the dress of nearly every grade in the army.

In the Tower of London is preserved the suit of armour presented to Henry VIII. by the Emperor Maximilian, commemorating his marriage with Katharine of Arragon, whose badges with those of her husband, are engraved upon it, with their initials united by a "true-lovers-knot." It is the most interesting suit of the period in existence, and is elaborately ornamented and covered with engravings from the "Lives of the Saints," which form a series of plates in the twenty-second volume of the "Archæologia." The great novelty exhibited in the armour of the period being the *lamboys*, or steel skirts that usurped the place of *tassels* and *tuilles*, and covered the body from the waist to the knee in fluted folds like the skirts of a tunic, sloped away before and behind to allow the wearer to sit in the saddle.\*

The cut of the foot soldier here engraved, from Skelton and Meyrick's work on "Ancient Arms and Armour," exhibits the usual amount of plate-armour worn by them, which consisted of a breast and back plate, from which were appended long *tassels* or *cuisses* of overlapping steel flexible plates which reached to the knee. The wide sleeves, and bonnet slashed and puffed, and ornamented with an enormous plume of feathers, show—

—those remnants  
Of fool and feather that they got in France."†

\* The series of woodcuts by Hans Burgkmair, known as the "Triumphs of Maximilian," will furnish other authorities; and the old pictures formerly existing at Cowdray, of the 'Siege of Boulogne,' and the 'Departure of Henry VIII. from Calais, July 25, 1544,' engraved by the Society of Antiquaries. So that there is abundance of material for the artist.

† Shakespeare's *Henry the Eighth*, act. 1, sc. 3.

Of the two figures here engraved, the first (who has his back turned towards the spectator) is one of the guards of Henry VIII., and is copied from the picture of 'the Field of the Cloth of Gold' at Hampton Court. The Rose and Crown is embroidered on his back. The other figure is copied

from the picture of his embarkation at Dover, also at Hampton, and has been selected for the purpose of showing the sword and buckler appended to the waist, and which, clashing together in walking, gave the name of "swash-buckler" to the braggadocios of the period. The occasional exercise with these weapons was enjoined to civilians, and sword and buckler play formed the usual relaxation of the London apprentices on ordinary occasions.\* They were formed of wood covered with leather, and strengthened by large nails or studs of metal.

During the reigns of Mary, Edward VI., and Elizabeth, the armour, except during the joust or tournament, seldom reached below the knee, like that of the soldier engraved above; the breastplates were of a similar form, but sometimes very long in the waist. The arms were defended by rere-braces and vam-braces, as the defences above and below the elbow were styled, but foot soldiers frequently appear without them. They wore helmets of the old form, with visors occasionally, but most frequently appeared in morions during the reign of Elizabeth, of the form exhibited in fig. 3 of the group engraved above. Towards the latter end of her reign the *combed* morion generally prevailed: it obtained its name from the raised serrated piece at top something like a cock's-comb with which it was ornamented. A specimen forms fig. 4 of the group just alluded to.

Beards having again become fashionable during the reign of Henry VIII., were considered of importance during that of Elizabeth, when each class of the community trimmed after a fashion indicative of his pursuits: at least such was the

\* The disastrous outbreak known as "evil May-day," began by the interference of a magistrate with two apprentices, who were thus "playing at bucklers."

general rule. While the churchman wore a long beard and moustaches that flowed on the breast, and was known as the *cathedral beard*, the soldier wore the *spade beard* and the *stiletto beard*, equally indicative of his calling. These beards were so called from their fancied resemblance to these weapons, and specimens from military portraits of the period form figs. 1 and 2 of the group above. Shakspeare, in his *Henry the Fifth*, act 3, sc. 6., makes *Gower* exclaim, "What a beard of the general's cut, and a horrid suit of the camp, will do among foaming bottles and ale-washed wits, is wonderful to be thought on!" An old ballad in "Le Prince d'Amour" says—

"Now of beards there be  
Such a companie,  
Of fashions such a throng,  
That it is very hard  
To treat of the beard,  
Though it be ne'er so long.

"The soldier's beard  
Doth match in this herd  
In figure like a spade;  
With which he will make  
His enemies quake  
To think their grave is made.

"The stiletto beard,  
O, it unakes me afraid,  
It is so sharp beneath:  
For he that doth place  
A dagger in his face,  
What wears he in his sheath?"

Fig. 3 shows another variety of the stiletto beard, being arranged in a double tuft or point on the chin. Fig. 4 might do well for *Falstaff* himself, for here we have the "great round beard like a glover's paring knife," by which he was known, and which was a common fashion with military men during the reign of Henry VIII., as we see in the foot soldier already engraved. It looked sufficiently formidable, and took least trouble in trimming and dressing. Those who were very particular sometimes dyed the beard; and in Lodowick Barry's comedy of *Ram Alley*, 1611, one of the characters asks "What coloured beard comes next my window?" receiving for answer, "A black man's, I think." To which comes the response, "I think a red, for that is most in fashion." In Ben Jonson's *Silent Woman*, the barber exclaims, "I have fitted my divine and canonist, dyed their beards and all."

Of the military weapons now in use the group here engraved exhibits the most curious. Fig. 1 is the military flail, the pole and flail being of wood, strengthened with iron, and having two formidable rows of spikes surrounding it. Fig. 2 is the morning-star, a ball of wood encircled by bands of iron in which spikes are inserted; it is appended to a pole by an iron chain. It was

sometimes *jocularly* (!) termed a "holy water sprinkler," the way in which it scattered blood when it touched a vulnerable part suggesting a similarity to the sprinkling of holy water in the Catholic Church. Both these weapons were used by footmen in attacks on cavalry, from the time of the Conquest to that of Henry VIII.; they are probably of eastern origin, and did frightful execution when wielded by a powerful arm. The ball was sometimes affixed to the summit of a staff, and thus became a sort of mace, for horsemen, very efficacious in destroying armour. Fig. 3 is a singular contrivance for giving a footman an advantage in a conflict with a mounted soldier. The central piece of flexible steel that form the letter V are springs that allow free passage when forcibly pushed against the neck of the rider, enclosing it immediately when they spring back, and thus allowing him to be easily dragged down. They were termed "catchpoles," and from their general use in apprehending felons, or escaped prisoners, the term became applied to the civil officers who carried them, a name that survived their use, and was familiar when its origin was unknown. Fig. 4. is the military fork: the hooks were used to catch at a bridle; the prongs, having a sharp edge, to cut them; and they were also of use as a defensive weapon in an attack of horsemen, who might be prevented from a too near approach. Fig. 5 is a target or shield, with a matchlock gun in the centre, which the soldier using could fire behind the shield, taking his aim through the grating immediately above. They are mentioned in the Tower inventories of the reign of Edward VI. as "Targetts, steilde, with gunnes," of which 35 are said to be kept there. The shields were faced with steel.

Fig. 1 of the above group is a halbert of the time of Henry VII. They are mentioned as early as the reign of Edward IV. Their use became pretty general during this reign, and they were always carried by yeomen of the guard during the reign of Henry VIII.; not finally getting into disuse among troops until after the accession of George III., and being still seen on state occasions. They were frequently elaborately ornamented on the head with figures and scroll work, and added essentially to the pomp of a royal or noble "progress." Fig. 2 is a halbert of the reign of Henry VIII.; the cutting edge formed into the shape of a half-moon; the curve sometimes took an outward direction, as may be seen in the cuts of soldiers of the period already given. The staves were sometimes covered with velvet and

studded with brass nails, a tuft or tassel of silk being affixed at the junction of the staff and the head. Fig. 3 is a pike, a weapon of common use during the period of which we are now speaking: they were an adaptation to infantry of the ancient spear carried by cavalry for many centuries previous. Fig. 4 is a partisan of the time of Henry VIII.: the side blades were sharp on both edges similar to those on the ancient bills or spetums.\* Figs. 5 and 6 are the sword and dagger of James IV. of Scotland, who was killed at Flodden, and are preserved in the Herald's College: they show the guards at the handle that now came into use. During the reign of Elizabeth these heavy swords, however, became generally disused, giving way to the lighter rapier, its convenience being very apparent when contrasted with that worn by Sir Thomas Peyton, recently described. Rapiers were introduced by a noted desperado, one Rowland Yorke; and although welcomed as a dress sword by the young gallants of the day, were rarely adopted by the elders of the community. Shakspeare, in the *Merry Wives of Windsor*, act 2, scene 1, makes *Shallow*, with an old man's love for the weapons of his youth, answer *Page's* remark, "I have heard, sir, the Frenchman hath good skill in his rapier;" with "Tut, sir, I could have told you more. In these times you stand on distance, your passes, stoccadoes, and I know not what; 'tis the heart, Master *Page*; 'tis here, 'tis here. I have seen the time, with my long sword I would have made your four tall fellows skip like rats." In Porter's comedy of the *Two Angry Women of Abingdon*, one of the characters, in a strain of complaint, exclaims—"Sword and buckler play begins to grow out of use; I am sorry for it; if it be once gone, this poking fight of rapier and dagger will come up; then a good tall sword-and-buckler man will be spitted like a cat or a rabbit." Fig. 7 is one of the poleaxes of the guard of Queen Elizabeth, preserved in the Tower Armory (where specimens of all these implements may be seen): it is an adaptation of the spear and horseman's hammer, for the use of the infantry.

Such were the more important military novelties of the Tudor era. Firearms will come in for a full share of attention during the next period, by which time they may be considered as having reached a high degree of perfection.

[The Stuart dynasty will form the next division of these notes; and, in order that it may be fully illustrated, the same extra amount of space will be devoted to it that has been devoted to that of the Tudors.]

## FRESCO PAINTING.

### MR. WILSON'S REPORT.

WE gave, in our last, the report of the Architect, Mr. Barry, "as to internal decorations, addition to building, and local improvements." We propose this month to publish part of Mr. Wilson's "Report,"† a document in which every artist must feel deeply interested; but every line of which is essential to those who design to compete for the honour of decorating the Houses of Parliament, or to pursue a branch of Art to which we have been, hitherto, strangers.

Although we consider it our duty to devote considerable space to this subject, we are still compelled to omit some portions of the document; and as the least important (if any part of it can be so described) we pass over the whole of the commencement of the Report (extending to seven pages), which treats of the early history of the Art, and contains elaborate remarks, commenting upon and explaining the following preliminary passage:—

"Pictures then are found on three kinds of wall: on the ashlar walls of Gothic edifices, on the brick

\* See the specimens engraved in No. 53, p. 107. A mistake occurs in describing fig. 5 of the first group on that page: it is a bill of the time of Henry VI., and not of Edward VI.

† C. H. Wilson, Esq., Director of the Government School of Design at Somerset House, was, in the course of the last year, employed by her Majesty's Commissioners on the Fine Arts to proceed to the Continent to collect information relating to the objects of the Commission. Having been furnished with the necessary instructions, he left England in August, and returned in January last.

walls of buildings of different dates, and upon coarsely-built rubble walls of different kinds. To these are to be added frescoes on lath, of which there are many examples in different parts of Italy."

Omitting, then, the observations on "Ashlar Walls," "Brick Walls," "Rubble Walls," and "Frescoes on Lath," we give entire Mr. Wilson's remarks on that matter of most vital consequence—

### MORTAR.

"It is not possible to make many observations on the mortar on which mural pictures of the period before referred to are executed, as, fortunately, there are not a great number which are in such a state of dilapidation as to permit a particular examination of them in this respect. The majority of these pictures are painted, as is well known, upon an intonaco composed of lime and sand. It is evident that there was a diversity of opinion with regard to the quantity of sand to lime to be used; and the same diversity of opinion exists amongst the modern frescanti. From such examination as it was possible to make, it appears certain that those frescoes have stood best in which it is apparent that there is a considerable proportion of sand in the lime; and I am disposed partly to attribute the bad state of the frescoes by Correggio in the Duomo of Parma to his having used what is called a rich intonaco (that is, with a small proportion of sand), and the faintness of the colours is perhaps to be attributed to the same cause.

"A number of mural paintings are executed upon an intonaco formed of lime and marble dust; these, however, are not frescoes, but distemper pictures; that is, pictures which, although in many instances commenced in fresco, yet were finished in distemper. Pictures of this description are also found upon intonacos of lime and sand; and if at first the practice may have arisen from necessity, it appears to have been continued afterwards from choice, even after complete works in pure fresco had been executed.

"The Signor Marini, of Florence, an experienced fresco-painter, is of opinion that the pictures by *Avanzi*, in the chapel of S. Giorgio, at Padua, are frescoes. This artist flourished in 1370.\* The mural works of Fra Beato Angelico, and of *Gozzoli*, are certainly commenced in fresco, and finished in distemper. That they were commenced in fresco is proved by the existence of joinings in the plaster at certain intervals; but that they were not finished in the same manner is quite evident, for these joinings are at such a distance from each other, that we must suppose the artist elaborately finishing several figures the size of life, or nearly so, in one day, which is manifestly impossible. This subject may be further considered in treating of distemper-painting.

"There is nothing to be learnt, apparently, from old Italian plastering. In point of execution, it is surprising that such careless work could ever satisfy the artists. The Venetians have shown themselves, in many instances, clumsy plasterers beyond all others; the works of Pordenone, especially, exhibit the rudest workmanship, the surface being very uneven, and the joinings of the intonaco which mark the different days' work being very carelessly executed: such is also the case in the frescoes of Titian.

"The Germans carefully teach the propriety of making all cuttings and joinings in the plaster at outlines, where it is possible to do so; but some of the old masters paid little attention to this rule. *Andrea del Sarto* frequently makes joinings at some distance from the outline of a figure, following, at the same time, no other outline; and this he has evidently done to enable him to paint in a little of the background at the same time with the figure, and whilst it was wet. *Gaudenzio Ferrari* has adopted, in some cases, the same practice. At times we find in the works of the above, and of other artists, joinings carried across limbs and other parts of pictures in a very awkward way, the result of carelessness and want of thought; and the effect is disagreeable. With the exceptions just mentioned, the rule of cutting at the outlines is supported by the practice of all schools.

"The carelessness of the Venetian artists and plasterers has been adverted to; the Florentine practice is better, but still far from presenting, in many of the early examples, sufficient attention to the preparation of the surface. If the wall was even,

\* It is also the opinion at Florence that the still earlier pictures by *Spinello Aretino*, in S. Miniato, are frescoes.

the plaster was made even, but if the wall was altogether the reverse, the plaster was allowed to be so also; and it is only in the works of later masters that we find this workmanship so attended to as to secure an even surface: the frescoes of *Allori* in S. Lorenzo and in the Palazzo Vecchio are models in this respect. It was the practice of *Allori* to make his cuttings at a very acute angle with the wall; which plan is, however, with much reason, objected to in modern practice.\* In Rome, it has been already noted, that the frescoes by *Raffaello* in the Stanze of the Vatican are, unfortunately, specimens of bad plastering; those by the same immortal artist in the Farnesina are much better in this respect.

"The Cavaliere Agricola obligingly showed me some pieces of plaster from the ceiling of the third Loggia, painted by *Giovanni da Udine*, which, from their damaged condition, it had been impossible to retain in their places in making the repairs. These specimens exhibited three coats of plaster, differently prepared; the first (that next the lath) was of lime and coarse sand, and was one quarter of an inch thick; the next, of the same thickness, was of lime and pozzolana; and the last, or intonaco, was of lime and marble dust, by no means very finely pulverized.

"This corresponds with the arrangement in ancient examples, from which it is evidently imitated. In the Baths of *Titus* examples will be found—first, lime and coarse sand, one half-inch thick; then lime and pozzolana, of one inch in thickness, in which, however, there is an admixture of sand and pounded brick; the last and upper coat is of lime and pounded marble. It will be found that this, as regards the two last coats, is the identical preparation which is so commonly used in Italy for floors, under the name of Venetian pavement, except that in the latter the fragments of brick in the substratum and the fragments of marble in the superstratum are much larger.

"It is also quite plain, from the size of the fragments of marble in the specimens of ancient plaster, both in the Baths of *Titus* and at *Pompeii*, that the wall could not possibly be brought to a smooth surface either with the trowel or float; it must have been allowed to dry, and was then polished. It follows that in walls of this description the red, yellow, and other tints with which it was painted, must have been subsequently applied, and had nothing of the nature of fresco, an art which, however, is apparently exemplified in ancient examples, for instance, in the *Nozze Aldobrandini*.

"It may be generally stated, without adducing other examples of this period, that where the plastering is uneven the ruin of the fresco, or its serious injury, is the result, whilst those frescoes which have smooth and even surfaces will be found to be generally in good condition; and the most perfect specimens, in point of workmanship and preservation, are the frescoes of the *Caracci* and of their scholars. These, in the majority of instances, are quite perfect, and may be quoted as triumphant specimens of the durability of this mode of painting.

### THE EXECUTION OF THE PICTURE.

"From the consideration of the masonry and plastering, I proceed to that of the execution of the picture; and first of the outline. The history of this process, as observable in the works of Italian artists, is of great interest. We find that, whilst several mechanical modes of outlining (fully described in the first report) were adopted for fresco, each artist used these means in his own peculiar way, little influenced, apparently, by any received rule; and, as every artist commonly adheres to his own method, the execution of the outline may assist in deciding on the authorship of a work of Art.

"The practice of indenting the plaster with a point or stylus is very ancient, and we find that the figures painted in Etruscan tombs were thus outlined, that is, the point was used to mark the external outline of the figure only. It was employed by the early masters, at the revival of Art in Italy, precisely in the same way in outlining their works in distemper on panel; thus *Giotto* drew, and his followers; and we find the same practice followed in the Sieneese school, with a singular exception, which is, that the figure of the *Madonna* is en-

\* It brings the lime or intonaco of the next day to so sharp an edge that it becomes difficult to spread it, and it is apt to dry too fast. The Germans cut at a much less acute angle, and the Florentines make the cut perpendicular to the wall.

tirely marked in with the stylus, that is, not merely the external outline, but the outlines of folds in the drapery are drawn in in the same manner; and a notice of this practice, confined to the school of Siena, is useful, as it establishes a clear distinction between the early pictures of that school and those of the contemporary Florentine masters.\*

"At a later period of tempera-painting (referring at present to easel pictures) the point was used in every part of the picture, as is exemplified in the works on panel of Fra Beato Angelico. It then came to be used, when oil was introduced, in the backgrounds only, which proves that the grounds for oil-painting were of the same nature as those previously in use for painting in distemper,† that is, of whitening.‡

"It is very remarkable that, whilst the point was used in distemper-pictures on panel, it rarely was in those of the same period on walls. It is never found in mural paintings by Cimabue, Giotto, Orgagna, or Benozzo Gozzoli, but was employed by Fra Beato Angelico in the architectural backgrounds only of the paintings in the chapel of Nicholas V. in the Vatican; in this case he may have pounced in his outline with a cartoon, and then have ruled in the lines of his architecture; but, as these lines are carelessly drawn down through the figures, an objection may be started to this theory, as the pounced outline of the figure would easily show where to stop. In Masaccio's frescoes in the Carmine the lines of the architecture are put in with the point, whilst the figures are not. It is very difficult to suppose that after the background was thus outlined the figures were drawn in with the brush only. It is true the head of Masaccio in fresco, which exists among the portraits in the Florence Gallery, is merely drawn in with the brush; but this does not prove that the outlines of entire pictures containing many figures were so executed.

"If cartoons were used in these earlier times, what could be the object of the curious practice of outlining in a rough and free manner on the last coat of plaster laid on previous to the intonaco itself? This is exemplified in all the frescoes by Benozzo Gozzoli in the Campo Santo at Pisa: § wherever the intonaco has fallen down, the outline of the composition is seen marked in with red; and I was informed by Mr. Gibson, R.A., that in Sta. Croce, in Florence, there are examples in which not merely the outline, but also the colours are sketched in.

"It has been supposed by some, that these outlines were intended as a guide to the plasterer in spreading the intonaco, but in no case do the joinings in the plaster coincide with them. If we suppose that the composition was thus sketched in to enable the artist to judge of the proper proportions and positions of the figures, what then was the use of his cartoon in this respect? It would have been more easy to place it against the wall, as is now frequently done. ||

"It is not easy to explain some of these facts, nor does the question much affect modern practice; but the subject is not without interest as connected with the early history and practice of Art. The solution that the figures were freely and readily drawn in with the brush after the architecture had been drawn in with a ruler and point, it is not easy to accept; it implies a certainty and readiness in drawing which it is hardly possible to conceive; and yet this readiness seems asserted in the O of Giotto, who, on the occasion when he drew

\* I had an opportunity of making use of this observation in Rome, in the case of disputed pictures, and it excited some attention and debate, both amongst distinguished artists and amateurs.

† The stylus was thus used by many of the great masters; by Perugino in his architectural backgrounds; by Fra Bartolomeo, Mariotto Albertinelli, and others.

‡ The Signor Pacetti of Florence, who has carefully studied this subject, says that the grounds on which old paintings, whether in distemper or oil, were executed, were formed of a fine whitening called "gesso da oro." This is said to be a product of Tuscany, and is unquestionably much finer than any whitening used in other parts of Italy, or in this country. It was mixed with a weak size made from parchment shavings, and could be drawn upon with a point with the utmost facility. The fact that these pictures were so drawn proves the softness of the ground.

§ Confirmed by Cennini's description (see "Trattato della Pittura," pp. 50, 60).

|| In the passage before quoted, Cennini does not speak of any cartoon.

it, seemed desirous of exemplifying the perfection with which he could outline with the hair pencil; and the practice is exemplified on a small scale, by Andrea del Sarto, by whom there exists in the Academy at Florence a small fresco, the architecture of which is ruled in with a point, and the figures are certainly put in with the brush only; whilst the habit of making alterations in the outlines of his figures in larger compositions does not say much for the careful preparation of cartoons on the part of this artist.

"It is very easy to determine by examination whether the point has been used with or without the intervention of a cartoon: in the first case the line is smooth; in the last sharp, and having a ragged edge.

"Luca Signorelli seems to have been the first artist, or amongst the first, who used the cartoon and point in the manner followed and recommended by the Germans; but it will appear that this mode, however convenient, may in some cases be objectionable.

"Another mode of outlining, that is by pouncing, was extensively adopted; this method, as well as the last-mentioned, of course implies the preparation of a large cartoon; and there was still another mode, or rather union of the modes above alluded to, viz., the outline was first pounced, and then, the cartoon being removed, the forms were retraced with the stylus; this is the practice of the modern Italians, and although imposing names may be quoted in support of it, an uncertain and feeble outline is the result; and besides, in sudden turns it breaks out bits of the plaster, leaving unsightly holes in the picture.

"A few instances may now be given of the different modes of marking the outline adopted by different masters. Luca Signorelli carefully marked in every necessary outline. Andrea del Sarto also used the point. Pinturicchio used it in his works at Siena and Spello. Although the absence of the use of this instrument is no proof that mural pictures are not fresco, its use is a certain proof that they must be so, showing that the lime was wet when the outline was put in, as any attempt to draw with a point on dry lime would merely make a series of rats with broken edges. The fact that Pinturicchio used the stylus at Siena proves beyond a doubt that, however much these pictures may be finished in distemper, they were begun in fresco.

"The practice of Luini may be mentioned as showing his facility in fresco-painting. In his faces the features are merely indicated by straight lines. On such careless outlines he painted female heads, the beauty of which never has been excelled.

"Razzi the Siennese, of a still more impatient spirit, dashed in a few lines on the wall, indicating the places of his figures rather than outlining them. He trusted to his facility with the brush, and is often very incorrect in his drawing; still the exquisitely beautiful female faces painted by him in S. Domenico, at Siena, are entirely produced by the brush, the outline previously laid in with the point being out of all proportion; thus the point of the nose and mouth of the St. Catherine, as outlined, are fully half an inch below the same features as finished in the painting.

"The Venetian masters were by no means careful. Titian seems to have taken little pains in preparing the outline in his fresco pictures, which he seems hardly to have painted *con amore*, although in many respects they bear the impress of his genius. Pordenone used the point, and in some places where he appears to have changed his mind, he has taken the first thing that came to hand to make an outline—perhaps the end of his mahl-stick, or the point of his dagger: thus breaking out lumps of plaster, and producing irregularities in the surface which he never seems to have thought it worth while to have mended again.

"Innocenza da Imola offers in his practice a striking contrast to that of the artists mentioned: he puts in every hair and wrinkle with the point, before beginning to paint.

"It might be supposed that the spirit of Buonarroti may have shown itself in the vigorous and impatient marking of his outline, but such is not the case; he adopted the slower process of pouncing. There are no marks of the stylus in the 'Last Judgment.' The remarkable distemper picture attributed to him, which hangs in the Tribune at Florence, is drawn in with the point; the 'Fates'

in the Pitti are not, neither is it seen in any frescoes of his which I could closely examine.

"Pietro Perugino pounced all his outlines, and so did his great pupil Raffaele; but his pupils again followed each his own fancy in this respect. The following facts as to the frescoes in the Stanze, may be interesting, and, when taken in conjunction with other differences in the colour and mode of painting, may not be without value in considering these pictures with reference to the different hands employed in painting them. The stylus is nowhere used in the 'Dispute of the Sacrament'; nor in the 'School of Athens,' except in the drapery of Hippias, where the artist has made an alteration in the folds. In the 'Farnassus' there is no use of the stylus, save in the robes of Homer and Tasso, probably therefore painted by a pupil, who followed his own system of outline. In the 'Heliogorus,' 'Attila,' 'Mass of Bolsena,' and 'Peter Delivered from Prison,' the point is not used, except in putting in the moon in the last picture. The 'Incendio del Borgo' has first been pounced, and then outlined with a very sharp point on the wet plaster; the picture of the 'Oath of Leo III.' is outlined in the same way, and so carelessly, that the plaster is broken out in parts: these two pictures are in this respect a striking contrast to the others. Giulio Romano did not use the point in his 'Battle of Constantine with Maxentius.'

"Raffaele did not use the point in his fine works in the Farnesina, and the advantage is obvious; those beautiful creations would have been injured by its use, for whilst its convenience makes it very proper to use it in works removed to a considerable distance from the spectator, it never should be seen in those which are nearer to the eye, especially if the light comes from the side.

"In the Loggia the outlines of the ornaments bounded by straight lines are put in with the point and ruler, without the intervention of a cartoon; all other lines are apparently pounced, but on minute examination I found that they were pricked on the plaster. It is not easy to understand why so tedious a process was adopted.\*

"The Caracci and their pupils sometimes used the stylus, but in the great majority of the works left by them in all parts of Italy they preferred the spolvero or pouncing bag.

#### PAINTING.

"In studying the Art of fresco-painting, it is necessary to consult the works of the old masters for examples of execution. In everything that is merely mechanical, we may profitably study the proceedings of the modern Germans; every process may be learnt from their practice, without visiting Italy, the graceful use of the brush excepted. Amongst the works of the present Italian fresco-painters, there is perhaps no example which it would be desirable to follow. The execution of these artists is to the last degree mannered and heavy; and however satisfactory may have been the progress of the French in other modes of painting, they have entirely failed in the few attempts which they have made in fresco.

"Avoiding the errors into which we may conceive that our continental brethren have fallen in the actual painting of their frescoes, we must look to the works of the old masters as examples; in these we shall find painting in fresco, in as many styles, and exhibiting as much diversity of touch and handling, as may be observed in the works of the same artists in oil. There is the same liberty of thought in the treatment of both methods, and genius exhibits its powers with as endless a diversity in the one art as in the other.

"We find in the frescoes of the old masters every quality of execution that has a name in oil-painting, although those qualities are necessarily exemplified in different degrees; we have transparency, opacity, richness; we have thin and thick painting, nay loading, and that to an extent that cannot be contemplated in oil. We have the calm transparent elegant painting of the Florentines and Romans, the rich variety of the Venetians, and there are cases in which the well-nourished brush of Rembrandt seems represented in the works of the fresco-painters of old Italian times.

"The distemper paintings of the elder masters

\* A drawing to be pounced must be first pricked: the artist having perhaps to use the same outline again, and being in haste to transfer it to the plaster for the first time, may have caused it to be pricked against the wall, thus making his assistant perform two operations at once.

have already been alluded to; it was their practice in laying in the preparatory tints in fresco to make some of these totally different from the colour to be used in finishing in distemper: thus, a dark red colour was almost invariably laid in as a preparation for blue, and this practice was generally adhered to with very few exceptions till after the time of Raffaele.\*

"In the works of Giotto, in the Campo Santo, at Pisa, the plaster seems to have been painted black in the first instance. Time did not permit a satisfactory examination of these works, but there is an example of the use of black as a preparation for blue in the Farnesina, where Daniele da Volterra† in his frescoes on a ceiling in that edifice has first laid in a coat of black in fresco, and then a coat of blue in distemper.

"In some pictures, as for instance in those by Andrea Mantegna in the Eremitani at Padua, the blue of the skies has either partially changed or entirely faded, whilst that of the draperies is comparatively well preserved: it is thus evident that from motives of economy different blues were used in different portions of pictures. There are many other examples of this in other parts of Italy.

The Cardinal Bonaventura, in the fresco called the 'Dispute of the Sacrament,' by Raffaele, is represented in a purplish-black robe which has been painted over red; this is an instance of the adoption of an indirect process with reference to another colour besides blue. It may be observed that the cardinal was a Franciscan, an order which is distinguished by a brown dress; and, as it is not brown in the picture, this may, perhaps, be an instance of a change of colour: but one object of this mode of painting seems to have been the security of the colours against change, while another may have been, the attainment of more harmony in the tone. In the picture just mentioned, Raffaele has followed precept in painting the blues in distemper over red, and these have stood perfectly. In the 'School of Athens,' on the contrary, he has painted in the blues in fresco, and they have perished, or nearly so, as they have in most instances in every part of Italy where blue has been thus used, both in pictures of this and of previous times. In the great works which Raffaele subsequently painted in the Stanze, he returned to the old practice of painting the blues above red, probably dissatisfied with the crudeness which was the result of using them on the wet plaster. The blue that has thus been generally used seems to have been of a vegetable nature, as, in many instances, it has changed to a brilliant green. It may be urged that the use of ultramarine or cobalt may obviate all necessity for such preparations, and secure the pictures against change; but whilst the former is by far too expensive a colour, the latter is crude and harsh in fresco. It seems to have been the blue which was used by the Caracci, and in their pictures, as in those of Guido, it will be found to be frequently out of harmony with the other colours; either these have in some degree faded, the blue remaining the same, or the blue has increased in intensity. Domenichino used distemper extensively in his works; but in those of Guercino will be found a triumphant solution of the difficulty; his blues are put in in fresco, and yet are in fine harmony with the other tones; they have generally a warm purple hue, and may be either small, or cabalt, tempered with a red, such as colcothar of vitriol. This is strongly exemplified in the Zampieri Palace at Bologna, where the harmony apparent in a fresco of Guercino is an agreeable relief, after the crudity which offends in those of his masters in other rooms of the same palace: a comparison between the 'Aurora' of Guido in the Rospigliosi at Rome (all the blues in which are not retouched) and that by Guercino in the Ludovisi, further corroborates the above observations.

"As has frequently been stated in the previous report, it was the practice to retouch when the fresco was dry, more especially in the shadows.

\* Several Italian artists mentioned to me their opinion that a coat of terra vert was laid in at times as a preparation for blue; and as in many places I saw this green colour, I at first adopted the opinion, but on subsequent observation I ascertained beyond doubt that the green was in reality a blue which had changed.

† For whom the criticism of Michael Angelo's drawing of a large head, still to be seen on the wall, was much more probably and appropriately intended than for Raffaele.

In some cases it is now easy to detect this retouching; it will generally be found to be proportionably somewhat darker than the painting around; and whilst in many frescoes a remarkable polish or gloss may be observed even in situations where that effect could not be produced by rubbing, the retouched parts are invariably dim; this is exemplified in the 'Evangelists,' by Domenichino, in the church of St. Andrea della Valle at Rome: these are historically known to have been retouched; and in viewing them from particular spots, their surfaces are seen to shine as if varnished, whilst some parts, which it may reasonably be inferred are retouches, such as darks under the arms and in the deep folds of the drapery, are quite flat and dim.\*

"There are portions in Raffaele's pictures which present the appearance just described; in the 'School of Athens' there are a few distemper touches evidently by the master's own hand, which have darkened: for instance, in one head he has had recourse to distemper to represent the external locks of hair. This seems to indicate a difficulty in fresco which at first sight appears formidable. In a picture by Gaudenzio Ferrari, at Milan, a female head with long flowing locks is represented, and the joining is made next the locks, and has a very bad effect; the difficulty is successfully overcome by the German artists without having recourse to distemper, and without placing the joining so as to injure the appearance of the picture. This may best be exemplified by a sketch: the flying tresses are painted in on the background on one day, and the head is put in the next day; the joining is indicated by the dotted line in the figure. The foliage of trees is managed in the same way. It would be vain to think of cutting round the outline of foliage; the outer leaves and thin projecting branches are executed on the same day with the background, and the cutting is kept quite within these. (See figs. 3, 4, and 5.)

"To return to the frescoes of Raffaele. The 'Heliodorus,' 'Miracle of Bolsena,' 'Attila,' and 'Deliverance of Peter,' seem to be pure frescoes, with certain exceptions already alluded to. In the first of these pictures there is a portion which exhibits a remarkable contrast to all the rest. The papal chair-bearers, known to be portraits of the artist's friends, are painted rather in the style of Pordenone than of Raffaele; the lights are much loaded, and have apparently been glazed; and, as extensive retouching in distemper has evidently been had recourse to, these retouches have become very dark.

"The ostentatious freedom with which these figures are painted contrasts disadvantageously with the calm dignified execution of Raffaele. With regard to the duration of this part of the picture as compared with the other portions, apparently in pure fresco, that which is so much retouched has certainly stood as well as the rest, with the exception that parts have become dark.

"M. Orsel, a distinguished French artist, who has attentively examined the fresco of the 'Last Judgment,' by Michael Angelo, says that it is much retouched in distemper, and without doubt by the great artist's own hand; as this distemper has darkened considerably, the present tone of the picture is accounted for, without having recourse to the supposition that the smoke of candles has been the sole cause. M. Orsel says that the retouching of Michael Angelo's great work is all effected by hatching; this fact necessarily leads us to infer that retouching was carried to a great extent in old frescoes; but, as will be shown, hatching is also much practised in the actual process of fresco painting, and it is consequently difficult to form a very correct judgment in every case as to what may or may not be retouching. Many important pictures exhibit much hatching, which is probably retouching. The 'Madonna del Sacco' of Andrea del Sarto may be instanced; if the very regular hatching over this picture be retouching, it has stood perfectly well. It is not probable that

\* It also appears from one instance, at least, that a retouch in distemper does not change so much from the action of damp as the fresco itself. The pictures by Professor Schnorr, in the Villa Massimi in Rome, are much injured by the action of damp from the soil, and have become light and cloudy. The retouches (for in these early efforts the professor did retouch) have all become visible, and appear as dark spots. The vehicle employed, as I learned from the artist himself, was yolk of egg and vinegar.

Daniele da Volterra, who added certain draperies in Michael Angelo's fresco, ventured to retouch the figures.

"The story of Franciabigio's wrath at the premature exhibition of his fresco in the court of the SS. Annunziata at Florence, may be instanced as supporting the prevalence of the practice under discussion, amongst the old masters. The picture was not finished in the artist's estimation, yet as fresco it would be pronounced to be so; all the intonaco is laid and painted upon, but as he esteemed the work incomplete, it is quite plain that he meant to retouch it in distemper.

"From these and other examples we find that although as Art advanced the extensive use of distemper, at first prevalent, was given up, and that pictures were chiefly executed in fresco, still the practice was never entirely abandoned; and till Art was revived by the Caracci, it may justly be doubted whether there is one mural picture in existence that is entirely completed in fresco.

"Indeed, after the adoption of fresco-painting, an apparent love of the older practice induced artists to return to it. Pinturicchio adopted it; his pictures at Siena are unquestionably much painted upon in distemper.\* Those at Spello seem to be executed much in the same way. The pavement in one of these pictures, for instance, is laid in flat with white, in fresco; when this dried, the artist evidently outlined the divisions of the stones over it, and he then laid on in distemper the colours which varied the pavement. In the pictures by the same artist in the church of Ara Coeli in Rome he has returned to the practice of the early masters; he has begun the pictures in fresco, and then entirely painted them over in distemper: and in all the works of this artist, foregrounds and foreground plants, landscape backgrounds, and probably the skies, are executed altogether in distemper.

"In the church of S. Onofrio at Rome, there are specimens by Baldassar Peruzzi which are painted in the old way; and the fine work of Melozzo da Forlì, now transferred to canvas and placed in the Vatican, is another instance of the extensive use of distemper. This last picture is in excellent preservation. There seems to be no reason to doubt the durability of this kind of painting, although other objections may be brought against it; but where egg has been the vehicle used, the colour, if loaded, has a tendency to scale off, while the pictures darken and become inky in tone.

"The Genoese also abandoned true fresco-painting, and used distemper to a great extent, so much so that their works may be considered apart under the head of distemper-painting.

"It is evident that the practice of the great masters supports the propriety of a certain amount of retouching, and it may be inferred from their works that no very bad results follow from its adoption within due limits. The Germans, however, maintain an opposite opinion, insisting that it is not allowable and quite unnecessary. If adopted at all, the limits seem marked by the practice of Raffaele in his later works; but it may be observed that loose opinions upon this subject might lead to careless practice, and in this view of the case the severe injunctions of the German masters are of value.

#### TRANSPARENCY.

"This important quality is perfectly attainable in fresco-painting; it is found in the works of the Roman and Florentine masters; amongst the latter, more especially in those of Andrea del Sarto; in those of the Lombards it is admirably maintained; and its excess is seen in those of the Venetians.

"It is not easy to explain how transparency is to be attained in fresco; there is, perhaps, no quality in which our German brethren are more deficient; the brushes which they use are, to an English eye, small for the work; and the first tint laid on with these presents a streaky appearance, which perhaps could be obviated in some instances by the use of larger brushes, and a different mode of using them. It will be easily understood how this streaky appearance is produced: having first given one wipe of the brush full of colour, the

\* M. Orsel, however, thinks that these have been retouched in wax, nor is the opinion wholly improbable; in a chapel in the Palazzo Vecchio at Florence there are frescoes by Ridolfo Ghirlandajo which have been lately cleaned by Signor Marini, who informed me that they had been glazed with something "unctuous," to use his own term.

artist follows it up with another, the colour sinking in instantly, and as he cannot lay the second wipe exactly to the edge of the first, the one overlaps the other in parts, and those parts are consequently twice as dark as the others which have got only one wipe, and so he proceeds laying a tint composed of light and dark streaks, but nevertheless transparent; this quality is lost in uniting the tint, for he continues to go over the surface till he obtains what he seeks—a quiet flat tone, which, however, generally proves a heavy one. Now, in the ancient examples, this union is obtained without sacrificing transparency. In a church near Conegliano there are some curious frescoes by a Venetian painter, in which the excess of this quality is exhibited; they do not merit the name of works of Art, and are very slightly executed; the colours seem laid in in one wash only, the plaster ground shining through; but these bad pictures prove that it is possible to lay in tints in a transparent and yet flat manner.

"Titian frequently makes use of the bare intonaco in particular places; thus in his fresco of the 'Healing of the Foot of the Boy,' &c., in the Capitolo of S. Antonio, at Padua, the shadows are laid in with brown in a very transparent manner, and for the half-tint he has left the bare lime. It may be doubted whether this practice is to be recommended; it is never found in the frescoes of the Florentines or Romans, and that great fresco-painter, Luini, obtains equal lightness and transparency without having recourse to it. Such a practice gives a work a sketchy character, which is objectionable, especially in the principal figures.

"How the effect of transparency is to be mechanically obtained, it remains for the artist to discover by practice.

"A Milanese professor says, that with a view to transparency it is necessary to lay in the first tints early in the morning, and then to leave the work and not to resume it for two hours. He further says that the lime, if it have any remains of an injurious caustic quality, exhausts its fury, to use his own words, on these first colours, and may be more safely painted on afterwards. It must be confessed that the frescoes by Appiani, which he instances as examples of the practice, are very far from exhibiting the quality of transparency. Other artists, however, hold the same opinion, and it is therefore proper to state it.

#### HATCHING.\*

"The prevalence of this practice amongst many of the old masters (for it is evidently not always the result of retouching,) seems to prove that they also found a difficulty in getting flat tints; in some of the later masters it is a mere manner, but in earlier and better examples it may have been adopted in the hope of getting a flat tint without destroying transparency: whatever was the reason, the practice was very general, and it is to be observed that the great masters did not cross in this hatching; the lines lie all in one way, and Signor Colombo of Rome says that the tempera hatchings in Michael Angelo's 'Last Judgment' are thus laid on with great evenness and dexterity.

"In the works of Raffaele, the most perfect of fresco-painters, there is no hatching anywhere, nor is there in those of Correggio. The hatching with which the Cupids of the last-named painter in the convent of S. Paolo, at Parma, are covered and destroyed, is manifestly the work of another hand; the lunettes underneath have fortunately escaped this profanation.

#### SOLID PAINTING.

"This is a quality that is easily attainable; it will be best understood by observing, that whilst the plasterer lays on a preparatory intonaco of lime and sand with the trowel, the artist lays on a finishing one of lime and colour with the brush, and he may employ it as thickly as he pleases. I observed in the works of Pordenone in Sta. Maria in Campagna, at Piacenza, that the lights were laid on with such a body of colour, that before the lime had time to set, the artist's sleeve, or mallet-stick, or something else in his way, has accidentally ploughed through his work, which he has not been able, or has not cared to mend.

"Paul Veronese, in his frescoes in the Villa

\* This term of Art means employing lines in shading somewhat in the manner of engravers, but more freely.  
† The clumsy hatching visible in parts of the frescoes in the Stanze, is evidently to be attributed to Carlo Maratta.

Mazer, has charged his lights; and his imitators, in their works, both in the above villa and in that of the Obizzi, near Padua, have loaded so much, that the lights stand up in lumps upon the wall. Such extravagancies, like the washing in of the shadows in the pictures near Conegliano before mentioned, are poor substitutes for a careful imitation of nature.

"The lights must of necessity be thicker than the shadows, as there is more time in the colours of the former than in those of the latter. The great masters laid in their colours without ostentatious handling; their works exhibit no tricks of manipulation; but it is surprising to observe the manner in which some artists seem to have worked their tints. Pordenone has already been alluded to, and Polidoro da Caravaggio produces an effect as if his brush had been full of macgilly, as may be seen in his frescoes in Rome, namely, in S. Andrea on Montecavallo, and in the Farnesina.

"It is necessary to mention these instances to prove the extraordinary dexterity that has been attained in painting in fresco, a dexterity, however, which is not to be admired when it produces such effects, and which too often distinguishes the pencil of mediocrity.

#### GLAZING.

"This process is frequently exemplified in the fresco-works of the old masters; its most successful application is seen in those of Razzi at Siena, where the celebrated picture, called the 'Cristo alla Colonna,' in the gallery of the Academy, is a particularly interesting example of its legitimate application in fresco, that is, of its use while the plaster is still moist; in this instance parts are made out by means of it, and much lightness and transparency are attained.

"Pordenone invented or adopted some process which resembles that common in oil-painting; his works have evidently been glazed after the lime had been allowed to dry; the flesh in all his figures is richly glazed—the transparent colour filling up the hollows arising from the peculiar loading already described as so remarkably exhibited in his frescoes, if they can be called such. Polidoro da Caravaggio seems to have adopted some analogous method, but probably these are the only masters who can be quoted as having adopted a practice so foreign to fresco-painting. Perhaps the artist who painted the Papal chair-bearers in the 'Heliodorus,' may be added to this brief list. The adoption of such a practice evidently arises from a misapprehension of the legitimate application of fresco-painting. It will be found that the Venetian painters generally had no clear idea of the true mode of employing this art: even Titian fell into the mistake of trying to produce effects of light and shadow and colours, like those which he had been in the habit of producing in his oil-pictures. The light and brilliant colouring of Paul Veronese enabled him to paint with more success in fresco than the generality of his Venetian brethren; but in his works it is evident that this is merely the result of his system, not any attempt at an application of principles of colour suited to the peculiar art of fresco-painting which he sometimes practised, and most successfully at the Villa Mazer. Palma Vecchio alone of the Venetian masters, seems to have truly estimated the powers of fresco; there are two saints by him in S. Liberale at Castelfranco, which have breadth and dignity.

"Razzi has already been alluded to as an artist whose works most prominently exemplify legitimate glazing in fresco; it is not apparent in the works of any other master to the same extent.

#### TIME OCCUPIED BY THE ITALIAN MASTERS IN PAINTING FRESCOS.

"It is not difficult, in examining some frescoes, to ascertain how much time has been occupied in painting them. In some examples, the joinings by means of which this calculation can be made, are distinctly visible; in others they are either so well executed, or are so concealed by the use of distemper, that it is very difficult to trace them.

"It is evident that the old masters painted with great rapidity; large and important works, judging from the following examples, were executed in a month or six weeks.

"The 'Incendio del Borgo,' in the Stanze, seems to have been painted in about forty days; the group of the young man carrying his father has been executed in three days.

"The exquisite group of the 'Graces,' in the Farnesina, by Raffaele, has been painted, at most, in five days. The Cupid and the head of the Grace, with her back to the spectator, have occupied one day; the back and part of the lower limb of the latter figure, another. In this day's work the rest of the leg may have been included. There appears to be a joining across the knee; there was certainly one across the neck: both these joinings do not follow outlines, but are in parts of the figure which are in shadow. It is, of course, better, as has been already observed, to cut by outlines; but this not always possible, especially in very large figures. The Germans prefer cutting across a broad light when circumstances compel the artist to make a joining where there is no outline.

"The graceful composition called the 'Galatea,' also in the Farnesina, has been entirely executed in eleven or twelve days; the head and body of the principal figure have been painted in one day. This subject will be further incidentally illustrated.

#### DURATION OF FRESCOS.

"The circumstances which must be taken into consideration in judging of the duration of frescoes have already been adverted to. It has been shown that where proper constructive principles have been attended to, and where the walls are of good and appropriate materials, the safety of the paintings is in a great measure secured, and it may be certainly proved that fresco is a very durable mode of painting, not surpassed, in this respect, by any other, if indeed equalled.

"But, independently of the most careful building, various causes may contribute to the deterioration or destruction of frescoes; and as these have been very distinctly described in the first report, it is not necessary to say much on the subject further than to state a few facts.

"Damp is the greatest enemy of this kind of painting; it ascends through the walls from the soil, and descends from ill-constructed or dilapidated roofs. In Venice, where the houses actually stand in the water, the external plastering falls off entirely to a height of twenty feet; in Milan, Padua, and elsewhere, I observed that paintings are obliterated on walls to a height of from seven to eight feet from the ground. The destruction of many fine works on roofs and on the upper part of walls is entirely to be attributed to culpable negligence or to ignorance; this is painfully exemplified in the Duomo, at Parma; the old insufficient roof over the dome still exists under the new leaded one, which has been added to save the wrecks of Correggio's works from final destruction; and the inadequate construction of the former is sufficiently apparent in the section (fig. 6). Many examples might be adduced of injury resulting to frescoes from imperfect roofing; and the fact having been recognised, precautions have now been taken, after irreparable injury has been done. The tiled roofs of Italy have everywhere been a constant source of injury to frescoes; but in some few instances, precautions of an extraordinary nature have been taken to make the roof water-tight. At the Villa Mazer flat tiles have been laid at right angles to the roof timbers, the joints being filled with lime. These tiles represent the planking under slates in this country, and the ordinary roof tiles are put over them in the usual way; this makes an impenetrable, but very heavy, roof. The plan has lately been adopted in the Palazzo del Giardino at Parma, the frescoes there, by Annibale Caracci, having suffered from damp. The Caracci have evidently been alive to the necessity of taking precautions against damp: the vault in the Farnese Palace, in Rome, which is under an open loggia, is covered with lead; at the Palazzo del Giardino the upper surface of the vaults has been carefully plastered; but this has not sufficed.

"Some frescoes by Allori, in the Palazzo Vecchio at Florence, which are on a six-inch brick wall, have lately been destroyed by plastering the back of the wall. In the library at Siena, the paintings on the vaults were ruined by some masons who mixed lime above them. All these facts prove the necessity of preventing, by every possible means, the passage of damp through the walls, and there is no difficulty whatever in effecting this.

"External frescoes may never be executed in this country, but their preservation in some parts of Italy may encourage their adoption in corridors and porticoes. Paintings are found to be well pre-

served on external walls turned to a favourable weather quarter.\* Thus, as at Genoa and Treviso, although frescoes are nearly obliterated by the action of the weather on some walls, it is to be observed that wherever they are protected by the projection of a roof or cornice, they are well preserved. External damp or sea air has no bad effect. The obliteration of external frescoes in Venice cannot be attributed to this, since those at Genoa are preserved; and those in the Campo Santo at Pisa, are doubtlessly destroyed by damp from the soil and roof. As has already been observed, that by Oragna, in the same place, has not suffered at all from the action of the atmosphere.

"The paintings in the upper loggia of the Vatican have suffered severely, owing to the inefficient construction of the roof. Those beneath, from Raffaele's designs, have been much obliterated, partly by damp (the corridor above having been left open till lately), and partly from their having been painted on an intonaco of lime and marble dust; they have also suffered in some measure from violence and mischief. To this last cause, unfortunately, the destruction of many valuable works is to be attributed, as a number of the buildings which should have been consecrated by the works of genius have occasionally served as quarters for the rude soldiery of ruder times, or even for the galley-slave.

"Many fine works have been irremediably injured by the populace; even those in churches have suffered in this way, and those in cloisters have also been much injured by wanton mischief. It is a mistake to suppose that the natives of Italy are exempt from this disposition, which is sufficiently proved by the injury inflicted on many precious monuments of Art in that country.

"Smoke has frequently been mentioned as a dangerous agent of destruction, but its effects can be removed. Thus, in the Palace at Modena there is a large hall, the ceiling of which is painted by Franceschini. The wood-work in the lower part of the hall was entirely burnt some years ago, and the frescoed ceiling was completely blackened by the smoke, but was afterwards cleaned, with perfect success.

"The frescoes, by Guercino, at Piacenza, have been injured in a peculiar manner; birds, getting into the dome, have flown against and scratched them.

"It may be proper to mention the frescoes of the Bolognese school in the Louvre at Paris, the climate of which resembles that of this country; with the exception of one, destroyed by the infiltration of water carelessly thrown on the floor above, these paintings are in a very good state."

Mr. Wilson has followed up these remarks by a valuable and highly interesting "Description of Paintings in Fresco by different Masters;" it occupies no great space: we shall give the whole of it in our next.

At present we need only remark there is but one opinion concerning Mr. Wilson's Report—it does infinite credit to his zeal, industry, and ability; it has been received with marked approval in the highest quarters, and may be considered a boon of rare value to the profession.

### THE BUST OF LORENZO THE MAGNIFICENT.

[Our notice of this bust—shown among other productions of Art at the meeting of the "Institute"—being incorrect in several particulars, Mr. Dennys, to whom the exquisite work belongs, has very obligingly forwarded to us a copy of a letter addressed by him to the Secretary of the Institute, giving its history. The facts are highly interesting; and we have much pleasure in submitting them to our readers.]

The terra-cotta bust of Lorenzo de Medici—probably, if not indisputably, executed by Michael Angelo more than three centuries and a half ago—is so interesting an object, apart even from its excellence, that I shall venture to trouble you with all the particulars I know concerning it. It is about two years since I first saw the work, then in the gallery of a commission-agent in Old Bond-street, where it had been for sale several months, if not years! It was the property of the Rev.

\* See the First Report, p. 15.

John Sanford, who was then, and is I believe still, in Florence. I purchased the work, and then wrote to Mr. Sanford requesting to be put in possession of all the particulars he could give me respecting it. I requested also such particulars as he could obtain for me of a bust in the possession of the Marquis Capponi of Florence, which bust Roscoe alludes to in his "Illustrations of the Life of Lorenzo de Medici," as the undoubted work in terra-cotta by Michael Angelo that had been preserved in the family of the Marquis from the time of Angelo, &c. &c. Mr. Sanford very promptly responded to my wish in respect to both the works. In reference to the bust in possession of the Marquis Capponi by a letter from the Marquis himself, of which the following is a translation, and which discovers a singular inaccuracy in Roscoe; and in reference to the work in my possession, by a statement of facts which will follow the letter of the Marquis—addressed to Mr. Sanford.

"It is with pleasure, Sir, I hasten to answer the questions you put to me the other day. The following is the truth respecting the bust of Lorenzo de Medici which I possess. It was in the Riccardi Palace, and several years since I had a cast taken from it. One of these casts was sent by me as a present to the late Mr. Roscoe, whom I had known in England. He had it engraved at the head of a book, in which he opposed the opinions of Sismondi in his account of the Medici. I do not know why he wrote at the bottom of the print that this bust was by M. Angelo, which I never either said or wrote; and M. Angelo was very young when Lorenzo died. The original was in the Riccardi Palace, having the face alone: it was even said that it was a mask taken from the corpse, which is contradicted by the examination of that specimen of Art: it is, however, very fine; the mask exists elsewhere. I believe Mr. Roscoe died soon after the publication of that work, so I had not time to rectify the error he had made. The above, Sir, is all you wished to know, and I avail myself of this opportunity to assure you of my high consideration, &c.

(Signed) "G. CAPPONI."

With respect to the bust in my possession, Mr. Sanford informs me that he purchased it of an artist, in whose studio he found it for sale as the undoubted work of Michael Angelo. It was previously in the possession of the "Avvocati Rivani, a very distinguished scholar and collector of works of Art, who died about ten years since." He was Secretary to the Antiquarian Society called Colombaria. This society possesses a mask of Lorenzo taken from the corpse; it is gilt and crowned with laurel. (This is the mask to which allusion is made by the Marquis Capponi.) "Before the bust left Florence," says Mr. Sanford, "I was requested to leave a cast for the Academy. The cast was made by Costoli. Coesvelt requested a terra-cotta copy, and, as he was an old friend, I let him have one. Some years since it was decided to place statues of the most celebrated Florentines in the vacant niches under the public gallery; three have been lately executed: one by Professor Grazzini of Lorenzo, and he took the cast from my bust for his model of the head." Besides the cast given to the Academy of Florence, another was presented to the Society of Arts in Edinburgh.

It must be admitted that none of these facts, nor all of them together, prove the work to be Angelo's. There are, however, proofs in abundance that it is a portrait of Lorenzo the Magnificent; and the preference given to it by Grazzini is one of many testimonies given by Florentines, that it is the best portrait known of that great man. The work itself is an evidence that it was modelled from the life: and what hand but Angelo's could have wrought a work of such power and grandeur by such simple means? The works of Angelo, "from the greatest even unto the least," owe nothing to mere execution, or nicety of detail; but all to his thorough acquaintance with the forms and structure of the objects he represented, and to the grandeur of expression of which he knew those forms to be capable. Nothing can exceed the almost rude simplicity of this bust: it owes nothing to grace, or lineal beauty; nothing to finish, or to any trickery of Art; and yet, for breadth of light and shade, and for grandeur of expression, it is, I conceive, without a superior, if not without a rival. What hand, then, but his who painted the 'Last Judgment,' and sculptured the 'Moses' that surmounts the tomb of Julius, could have executed this bust? Until this question is satisfactorily answered, there can be but little impropriety in ascribing the work to Michael Angelo, and of venerating it accordingly.

Mr. Sanford says, "The celebrated Bartolini,

who has a European reputation, dining with me some days after I had purchased the work, I told him that I had something to show him. When I conducted him to my cabinet, the moment he saw the bust, he exclaimed (I translate literally his words), "Where did you find this bust?" "Here, in Florence." "Is it possible that such a work should have existed, and I not have seen it! It is without exception the grandest work of Art of the kind I have ever seen, ancient or modern. It can be by no other hand than that of Michael Angelo; and I know of no bust by him of equal merit. It must have been done when he was very young, as in after years he did not work with so much care."

Costoli, the sculptor of 'a Dying Gladiator,' and the 'Statue of Galileo,' and next in place and reputation in Florence after Bartolini, has, I am informed, expressed a similar panegyric on the work; as has also Numa Canziani, Professor of Philosophy, and considered one of the best connoisseurs of Florence. From the letter of the Marquis Capponi, it will be seen that the bust of the Marquis is not by Michael Angelo; but was a mask, or face only, obtained by the present Marquis from the Riccardi Palace, and afterwards made into a bust, from which a cast was taken for Roscoe, who had it engraved for his supplementary volume of the "Life of Lorenzo." The assertions, therefore, of Roscoe relative to the Capponi bust, and his opinions concerning it, appear to have been wholly without foundation. I might here observe that the bust in my possession having the *berretino*, or scarlet cap, affords further proof of its originality, if I am right in the inference I draw from the following fact. Lorenzo the Magnificent was buried with the *berretino* on his head (as will be seen by the following extract from Roscoe,) this circumstance suggests the inference that the cap was a favourite article of dress with Lorenzo when living, and that Angelo, aware of the fact, took advantage of a circumstance so favourable to the simple grandeur he intended to produce in the head of his great patron.

"To the researches of the learned and laborious Canonica Moreni we are indebted for some interesting particulars on this subject. In his description of the chapel erected by Michelagnolo for S. Lorenzo, for the family of the Medici, he has collected the most authentic notices respecting it. Amongst the documents consulted by him is an original M.S. of Roodinelli, which formerly belonged to Manni, from which it appears, that on the third day of June, 1559, the bodies of Lorenzo de Medici, and his brother Guilianno, which had remained many years in the ancient sacristy of S. Lorenzo, were removed and placed in a large sarcophagus of porphyry, which stands on the left hand of the sacristy. The body of Lorenzo was entire, and was covered with white drapery, with the *berretino*, or scarlet cap, on his head. He had been buried 67 years. The body of Guilianno was entirely decayed. The wound on his head, which he had received in the conspiracy of the Pazzi, and which had penetrated the bone, was, however, still apparent; and that of Lorenzo, in his throat, was still visible, though the mark was faint."—*Illustrations of the Life of Lorenzo de Medici*, pp. 211, 212.

### THE USEFUL ARTS.

#### PROTECTIONS OF DESIGNS.

AN Act of Parliament was passed, at the close of the late session, for the extension of the privileges of registration—previously limited to designs of an ornamental description—to designs for articles of utility; that is to say, to designs of nearly every other description whatever. Although little was said of it in its progress through Parliament (to which, perhaps, we are indebted for its having passed so easily), and although it has not been ranked among those achievements of the past session which are worthy of boasting of, it is, in our humble judgment, fraught with more benefit to the Arts and Manufactures of the country, and to all engaged in them, than the whole of the other acts of the session—or indeed any half dozen such sessions—put together. We look upon it as a real boon conferred on the Genius and Industry of the people—as their act of Emancipation from much, if not the whole, of that enormous load of oppression, which our wretched and monstrously expensive system of patent law has for ages imposed upon them. From a judicious desire of averting opposition on the part of those interested in the maintenance of the existing abuses, it has been slipped through the Legislature, and is even worded in such a manner, as if it were only another act for

the protection of such trifles as gingham sprigs or hat shapes; but it is, in truth, an Act for the Protection of New Inventions of all classes and degrees (with a very few exceptions), those of the highest as well as those of the least value; an Act, the benefit of which will be felt, and, we doubt not, gratefully recognised in every workshop and every working nook of the United Kingdom. It is, in a word, "An Act for making Patents cheap, and securing to Patentees cheap and speedy Justice." It will not, we think, require many words to make all this abundantly manifest to our readers.

In the first place, the Act establishes a copyright in "any new and original design for any article of manufacture having reference to some purpose of utility, so far as such design shall be for the shape or configuration of such article, and that whether it be for the whole of such shape or configuration, or only for a part thereof."

The "shape or configuration?" What mechanical improvement is there which will not fall under this designation? In the former Designs Act, the words "external shape or configuration" were used; but here there is no qualification whatever. The shape and configuration may be either external or internal.

But the designs must have reference to "some purpose of utility." Be it so. How few are the things which can be produced by the hand of man which have not "some purpose of utility" for their object? Many things may have utility in them, besides those which serve directly to lessen the labour, or to augment the stored wealth, of a people. He was a useful inventor who first changed a spear into a pruning-hook; but so also is he who converts an implement of destruction into anything else, however frivolous; or who by any sort of device makes pride, or fashion, or folly, contribute to the encouragement and sustenance of honest industry.

We really find it a matter of some difficulty to imagine any cases of mechanical improvement which will not come within the exceedingly comprehensive terms of this Act. Such an invention as Watt's great discovery of condensing in a separate cylinder might possibly fall without the line; but the direct-acting engine, the oscillating engine, and a score of others of the like character, would as undoubtedly fall within it. All paddle-wheels, and all stern-propellers, would be most clearly included. So would all agricultural machines; all railway bars, chairs, sleepers, &c.; all wood pavements. In short, mere processes only, and such chiefly as are of a chemical description, will be excluded. But for how long? If the Act is found to work well—as it doubtless will—with respect to the great majority of inventions, how will it be possible to resist the admission of all the rest to the like privileges?

Again, the design may be for any article of manufacture having reference to some purpose of "utility." The former Designs Act drew distinctions between articles, according as they were in metal, or wood, or glass, or clay, or paper, &c.; but in the present Act all such distinctions are wisely thrown overboard. The abstract design, in which only there can be any merit, is the only thing looked to. No matter what the article is made of—if it be only an article of utility, and designed in a new manner, the present Act will protect it against all piratical imitators.

Secondly, the copyright is to exist for "the term of three years." This is less by many years than it ought in justice to be; but we may hope to see it ere long extended. It is a valuable instalment, at any rate. But though the term is short, there is this to be observed on the other hand—a point the more deserving of observation, that nine persons out of ten may read the Act without its suggesting anything of the sort to them—that it is a term of three years for all the three kingdoms—England, Scotland, and Ireland. To secure by letters patent the right to an invention for fourteen years (all patents being for this term, neither less nor more), for the three kingdoms, a person must take out separate letters patent for each, and incur altogether an expense of about £400 (including specifications), which is about equal to £86 for every three years of the period. Now under the present Act he may secure a three years' protection, extending over all the three kingdoms, for less, in most cases, than £20, or one-fourth of the present expense. And this, too, on demand—by one brief course of proceeding—one appli-

cation, one specification, one payment, one certificate.

And though three years be truly a brief period of protection, it will, in a great many cases, be found long enough to enable an inventor to introduce an invention to public notice, and to establish a connexion for it which will last him his lifetime; while, if he had been obliged to pay £400, or, supposing he took out a patent for England alone, £130, before he could move a step, his invention might never have seen the light at all, or been of the least benefit either to his country or to himself.

Thirdly, the copyright is to be granted to the "proprietor of the design." He may be the proprietor either by right of invention, or by right of purchase. Patents can be taken out in the name of the actual inventor only—a circumstance which often prevents most meritorious inventions from obtaining the sort of patronage which they are most in need of, and is, in all cases of joint proprietorship, productive of a good deal of trouble and expense. The number of persons can be but few who cannot themselves command £20 to obtain a three years' copyright of an invention; and the number still fewer who will not find it an easy matter to obtain a good price for any really useful thing, when a purchaser can, by so simple, cheap, and expeditious a process as the present Act provides, have the legal estate in it transferred into his own name.

Lastly, the remedy for the piracy of designs registered under this Act is cheap and expeditious beyond all past example in matters of this sort. No occasion for long bills in Chancery, or tedious trials at law; no £500 and £1000 bills of cost to enforce a simple matter of right. An injured party has but to make his complaint before any two justices of the peace in his neighbourhood, who are empowered (by the previous Designs Act, the provisions of which are extended to the present) to inquire into the whole matter, and to convict the offender in a penalty of from £5 to £30 for each offence, besides costs, "provided the aggregate amount of penalties for offences in respect of any design, committed by any one person, up to the time at which the proceedings shall be instituted, shall not exceed £100." If one conviction does not suffice to put down a piracy, a second may be had, and so on as often as a new offence, or batch of offences, is committed; the expense in each case not probably exceeding £5. We do not imagine there could arise many cases in which such a summary course of justice as this would not be found amply sufficient for the protection of an inventor; but as piracy might occasionally take place, in a day or week, to an extent far exceeding the maximum amount of penalties which the justices are allowed to inflict—as, for example, by throwing on the market all at once two or three thousand fraudulent imitations of a registered design—the right is reserved to the injured party of bringing an action at common law for damages, if he shall elect so to do.

#### FACADE OF THE BRITISH MUSEUM.

WHAT we lately said on the subject of the British Museum has, we perceive, been quoted by others; and in one or two quarters besides, some anxiety has been expressed that ere it be altogether too late, an effort should be made to obtain for the country a splendid example of classical architecture, sculpture, and other decoration in the portion of the edifice which remains to be erected. Yet though such feeling does exist, it is, apparently, not a very general one; and very little manifestation of it has been displayed on the part of the public press as a body, though the matter is one of public concern, and one especially affecting one extensive branch of Art among us. Unless it be meant that we should repudiate Grecian architecture altogether, the Museum affords a noble opportunity of showing what may be made of that style when fully set off by all the varied embellishment of which it admits, and the effect which may be imparted to it, by an architect capable of treating it with geniality and poetic gusto, and who, instead of looking at it through "Stuart's Athens" with the eyes of a plodding copyist searching for a pattern to work by, can infuse into it fresh spirit, and array it with new graces.

Hitherto our most successful attempts in a pure classical Greek style have been satisfactory only

partially, or up to a certain degree: we have several tolerably fair and clever copies and imitations of it, but nothing to show it in its intensity. We are content with it in *dishabille*, and that often in rather slovenly condition: what it is when, attired in its regal mantle and crown, it shows itself in all the pomp and majesty of Art, we have yet to learn. Our Anglo-Greek architecture may be said to be divorced from sculpture; for if there be a bit of relief within a pediment, and perhaps a statue or two on the top of one, it amounts to the *ne plus ultra* of decoration of that kind, while of other embellishment there is scarcely ever any whatever, hardly even what regard to finishing requires. Whatever does not present itself immediately to the eye in the general design, has no study, nor even decent care bestowed upon it; so that there are no minor graces of detail, no charms of *recherché* workmanship to detain and captivate the eye: on the contrary, it may be considered fortunate, if at the second glance it be not shocked by detecting some positively offensive blemish, or some instance of unpardonable meanness. In this respect the façade of our National Gallery is exceedingly defective indeed, independently of its faults as a composition; let then the façade of our National Museum be eminently the reverse, and adorned with all the refinements and luxuries of architecture. Let us have sculpture both in bronze and marble—both in the form of statues and reliefs; and moreover so arranged as to display themselves to the utmost effect, so as to give not merely an ornate but picturesque character to the architecture. Nay, we would recommend even polychromy to a certain extent and moderate degree, and gilding also: that is, for the soffits and ceilings both of the main portico and the other colonnades, whose pavements ought in that case to be rendered ornamental likewise. While such decoration would be sufficiently protected from the weather, it would not be at all obtrusive in a general view of the building, because it would not display itself until the porticoes were entered or immediately approached, when it would strike very forcibly. The backgrounds, or walls within the colonnades, might be partially encrusted with specimens of *British* marbles, the rest of the surface being inlaid with reliefs and pieces of ornamental sculpture, let into it as panels: and here would be an opportunity for giving us one or two *restorations* of originals deposited within the building itself, for the purpose of conveying an idea of what they were when in a perfect state. In short, all the colonnades might very properly be made to assume the character of an *out-door* museum—of vestibules announcing the still more precious treasures of Art collected within. Were the opportunity properly turned to account, it would be an excellent one for introducing pictorial decoration externally—that is, sheltered within the colonnades—not in fresco, but *enamel* painting, which is thus described by Mr. Eastlake in one of the Appendices to the "Second Report of the Commissioners of Fine Arts":—"More durable than mosaic, more under the command of the painter, so as to enable him to give the greatest perfection to his work, this beautiful invention in its application to the *exterior* of the Church of St. Vincent de Paul, may rival the most remarkable effects of the kind that Art has produced." Why, then, supposing there be any real feeling for Art among us, should we not now avail ourselves of that mode of painting in this country? Were it proposed to do so at all for the façade of the British Museum, that circumstance alone would excite very strong interest indeed; for such application of painting, externally, would be a still more decided novelty in architectural embellishment than *fresco* in the Houses of Parliament.

Yet, however exquisite as such, embellishment of this kind would be of comparatively little use, unless there were to be a corresponding degree of majesty and magnificence in the general design, both as to composition, and character of detail. Consequently it is most important that decoration, to be superadded to the architecture, should be provided for, and well considered from the first, as regards general effect; and by way of second "consequently," it is important to settle immediately the question,—Is the actual design worthy of being so adorned?

## MEMORIES OF PICTURES.

By Mrs. S. C. HALL.

## NO. V.—FLAXMAN'S PORTRAIT.

AMONG the greatest treats a lover of Art can enjoy is a visit to the British Institution, to renew acquaintance (the word is far too cold a one) with pictures it is a privilege to look upon—old friends you have glanced at in days "lang-syne" in some private collection, where you had not, or were not allowed, time to linger, but whose countenances you have never forgotten. It is a noble banquet—permitting us to revel among the glories of dead, yet ever-living, masters. The "Sir Joshua Room" is, in truth, a rich feast; though some of the beauties are chilled, as all beauties must be, by Time, there are passages and effects that will strengthen the exertions of the gifted and aspiring artist—the man worthy to be a painter—and send the weak-minded and incompetent away in despair. In the middle room is a gathering of immortal minds of many countries. In the south room are collected the glories of our own land: here are the works of Gainsborough, Hilton, and Opie; Harlowe, Hogarth, and Lawrence; and others whom it is an honour to name—not a perplexing host of pictures, but a sufficient number to delight all eyes and occupy all minds, for there are paintings to please all tastes—to cultivate knowledge, to awaken high thoughts. On one side of the south room is a dark, unostentatious, portrait; I had seen it many years ago, and never forgot the high, broad-set forehead, and the deep and expressive eyes. Do not let the fascination of Lady Hamilton, or the brilliancy of the "Lady" near her with smiles as bright as sunbeams, and lips like roses, draw away your attention from that noble head; you cannot fail to observe that the compressed mouth is full of the silence, imposed, not by secrecy or churlishness, but by great and excursive thought; that the pallid cheek and unrefracted tone of the whole face, bear evidence of hard labour, and the workings of a mind—none higher or holier to be found in broad, triumphant England. Yet the lower portion of the face has a pained, an *anguished* look—a look of discontent—which never could have belonged to JOHN FLAXMAN. I have written the name with a feeling nearly allied to reverence—such as I cannot describe. It is a privilege to possess his published works, and frequently to recal the sensations they create, filling the mind as well as the imagination. I do not venture even a thought of compressing into this brief paper aught approaching a biography, or a regular numbering of his wonderful productions; all I dare hope is, that some may be induced to contemplate with me, the beautiful and harmonious combination in this eminent man's unsullied character—of the most elevated Christian principles, and the noblest range of highest Art. Every day adds to his disciples; although it took a very long time to convince our foreign-loving country of the mighty genius of that great good man—a long long time before we acknowledged that a pale weakly boy, a boy so sickly that his childish days were spent on crutches, and his studio was a little padded chair at the back of his father's counter—it took, indeed, a long and a weary time to convince us of what a large portion of Europe had previously proclaimed loudly—that the delicate, fragile child had grown into the IMMORTAL MAN.

While his father was wandering from town to town in the provinces, his wife—his first wife—gave birth, in the good city of York, to the after illustrator of Homer. Two or three years subsequent to this event the elder Flaxman was located in New-street, Covent-garden. But though Flaxman's father was obliged to keep a small shop to sell casts of his own manufacture, his forefathers bore brave arms, and shed brave blood in the field of Naseby! It is strange to feel a pleasure in writing this, when John Flaxman, by the power of his own genius, has achieved more real honour by its exercise than any of his name; but, despite our philosophic reasoning, there is no man who has had brave ancestors who is not proud thereof; although glory may be but the "hatchment" that "hangs over the dull and mouldering tomb," still a hatchment is a token of ancestry, and is valued accordingly. We have no right to speak lightly of the greatness of those who led in

the path of honour or the field of triumph; and I doubt not the memory of those Puritan struggles had somewhat to do with the elevated and severely true character of many of the Miltonic conceptions of Flaxman.

A clergyman of the name of Mathew, a gentleman who fostered Art, and loved what he fostered, relates his first interview with the already inspired child: his words must be quoted—they could not be improved:—"I went to Flaxman's shop to have a figure repaired, and whilst I was standing there I heard a child cough, behind the counter; I looked over, and there I saw a little boy, seated on a small chair, with a large chair before him, on which lay a book he was reading. His fine eyes and beautiful forehead interested me, and I said, 'What book is that?' He raised himself on his crutches, bowed, and said, 'Sir, it is a Latin book, and I am trying to learn it.' 'Ay, indeed,' I answered, 'you are a fine boy, but this is not the proper book; I'll bring you a right one to-morrow.' I did as I promised; and the acquaintance thus casually begun ripened into one of the best friendships of my life." Theodore Hook had a favourite proverb—which he loved to quote and write—and sadly could he testify its truth: it was—"Wrong never comes right." May we not say that "Right never comes wrong?" The feeling which obliged the clergyman to look over the counter when the child coughed, was right; the bringing the book, when promised, was right; the beautiful friendship which ensued, was not that right? Was it not greatly right when Mr. Mathew took the young Flaxman frequently to his house, and when Mrs. Mathew read aloud and commented on the pictorial beauty of Homer, while the boy, warmed by such kindness into strength, sat by her side embodying the most striking passages, or those that most vividly awoke an imagination as deep and pure as that which flowed in the ancient verse. He was no more than eleven years old when Mr. Mathew first brought him to his house, where he first saw Mrs. Chaponne, Mrs. Barbauld, Mrs. Montague, and others, who impressed him with ideas of the value and dignity of Literature; and there was far more *prestige* about the literature of those days than in our own unstarched times: female literature—sailing about in feathers and hoops and powder, and large fans—must have seemed very extraordinary to the boy, just emerged from behind the counter of his father's shop. The child, even then, doubtless distinguished the real from the unreal, and could separate the talent from the fashion. Bee-like, he seemed to have had the power of extracting honey from all things, for his works (holy manifestations of his genius!) are altogether free from every species of what may be termed "the mode." Struck by the quiet grace and beauty of these boyish sketches, the youth rejoiced over a commission before he entered the Royal Academy as a pupil, which he did when in his fifteenth year. In 1770 he exhibited a figure of Neptune, in wax; in 1827, the statue of John Kemble, in marble. Fifty-seven years between these periods—fifty-seven years!—how long an age to look forward to! how short a time upon which to look back! In the early part of his career, when a sudden burst of health invigorated his feeble limbs, and enabled him to join in all the independent vigour of successful industry—the healthiest and happiest tonic that genius ever quaffed—he laboured during the day with mallet and chisel, or in more pliant plaster, and designed for the Wedgewoods all that rendered their manufacture so beautiful. His relaxation was the accomplished society I have named, where his pencil translated into our vernacular the poetry of the mighty ones of old.

It is delightful to observe how equally the elements were mixed in the mind of this truly great man. If annoyed in one way, he found consolation in another; he laboured without murmuring through the day, and enjoyed his evenings with an enlarged heart; and when he married Miss Anne Denman, it has been said that in their union the church performed a miracle, blending them really into one flesh and blood. It was a very peevish, ill-tempered thing of Sir Joshua, to tell the sculptor that, "because he was married he was spoiled for an artist." He little knew—old bachelor that he was—how much it is in a woman's power to strengthen her husband's exertions—by words of encouragement in those moments of despondency, when the very activity of the mind causes it to faint; by turning a deaf ear to a hasty word,

but opening both ears and heart to every word of kindness; by strict yet not mean economy; by learning enough of whatever art he lives by, to value his exertions, and teaching herself an interest in his pursuits, even if she do not at first understand them; by remembering her vow of obedience, which, if she love, as did Anne Denman, she will feel a privilege and not a yoke; by setting the house of genius in order, without disturbing arrangements which, even if she do not comprehend, she must take for granted are necessary; by rendering duties privileges; by a tender and confiding up-looking, first to her God and then to her husband; by living in, and for, his love; by offices of care and kindness, coming like the perfume of the rose from the whole, rather than from any particular thought or premeditated act. Such a wife was Anne Denman to John Flaxman; and no wonder was it that his small household in Wardour-street, enriched by such a presence, became noted for its serene elegance as well as its abundant mind.

But Flaxman, when he had acquired the means, longed to see, and study in, immortal Rome. His classic appetite hungered for that classic food which can be obtained only there, and she who shared his thoughts and feelings desired equally to attain the object of his wishes. How they enjoyed their residence abroad may be imagined, but cannot be described. It was while there that Mr. Flaxman perfected his illustrations of Homer, and also illustrated Æschylus and Dante. He saturated his fancy with the spirit of the days of old, but must have always found it easier to imagine than to copy. His communications from Rome were not extensive; they are, we believe, in the possession of Miss Denman, Mrs. Flaxman's sister, who has also a number of Flaxman's unpublished drawings, every line of which is a lesson. This lady possesses the small MS. volume, which is still, unfortunately for the world, only MS. Allan Cunningham mentions it in his life of the sculptor, and perhaps, as a woman, I love Flaxman all the more for the deep, delicate love he bore his wife. This is evidenced—among a thousand other evidences—by this little book made expressly for her.\*

Surely Mrs. Flaxman was prouder of so holy a tribute than if a kingdom, with all its mightiness and impurities, had been laid at her feet. Much profit may all derive from an acquaintance not only with this great man's works, but from the study and contemplation of his character; it passes all ordinary delight when feeling that the man who achieved such distinction was not only great in talent, but *morally worthy*—all honour to his name! He is the finest example in the records of Art to set before the young; whether we remember how his mind, persevering, clear, and confirmed, as it was, lifted him out of the heaviness of a weakly constitution—or consider the serene industry, so dignified and pains-taking, which taught him to elevate the homely cups and bowls manufactured by Wedgewood into elegant and classic shapes—one of the surest means of multiplying taste. Nothing can be more instructive than to view Flaxman in the morning, bestowing Etruscan beauty on a milk-jug,—proving that what genius adopts can never be considered "common or unclean,"—and silently at night embodying the finest conceptions of our greatest poets. And what a beautiful lesson does not his patience impart! When Engleheart received the gold medal—which the voices of all his brother students awarded Flaxman—he was hiding his pale and tearful face, but resolving, none the less, to proceed, like his own Penelope, to the Ithaca of his heart and fortunes. What

\* "On the first page is drawn a dove with an olive branch in its mouth; an angel on the right and an angel on the left, and between them is written 'To Anne Flaxman'; below, two hands are clasped as at the altar, two cherubs bear a garland, and the following inscription to his wife introduces the subject:—'The anniversary of your birthday calls on me to be grateful for fourteen happy years passed in your society. Accept the tribute of these sketches, which, under the allegory of a knight errant's adventures, indicate the trials of Virtue and the conquest over Vice, preparatory to a happier state of existence. After the hero is called to the spiritual world and blest with a celestial union, he is armed with power for the exercise of his ministry; and for fulfilling the dispensations of Providence, he becomes the associate of Faith, Hope, and Charity, and, as Universal Benevolence, is employed in acts of mercy.'—JOHN FLAXMAN, October the 2nd, 1796."—Allan Cunningham.

a noble lesson was this!—How full of dignity—how elevated—how sustaining! What a fine example to follow! How proud should we be of our countryman—and he had his reward—for the firmness of such patience is the accompaniment of a great mind, and must eventually triumph.

The fame of his drawings spread abroad;—their severe yet hallowed purity, their elevated character, their simplicity conveying by a few strokes of an almost inspired pencil what others, less richly endowed, would have taken pages to portray!

The volumes of his art should form a portion of every library, not to be carefully "put by," but rendered familiar. I saw the other day, in my own room, two young girls set aside a volume of French costumes to turn over and over again his "Odyssey," which, perhaps, for austere simplicity, is the most exquisite of his productions. Let those who examine the leaves of this precious volume remember that for these designs Flaxman received—twenty-one shillings each! The *Conte Eséque* of Derry, after they were known, gave him a commission, the subject from "Ovid's Metamorphoses," four figures of the heroic size, Flaxman agreed to do for the sum of £600! He worked night and day, and though he lost several hundred pounds by his work, his high heart made no complaint, nor did the Earl of Bristol!—Lord Bishop of Derry!—go beyond his bargain! To give even a *catalogue raisonné* of the works, both on paper and in sculpture, of this wonderful man would fill volumes. His drawings, in fact, are his noblest sculpture, for the marble did not always yield to his chisel as he desired; and those who understand such matters say that he never was at home with modern costume. After his seven years' sojourn in Rome he returned—triumphant, for his fame was established; happy, for he had also proved that domestic happiness and artistic reputation can be combined. No fame, no distinction could disturb the equanimity of his temper, or render Flaxman unworthy of himself; and when the Royal Academy elected him a member of their body he continued just the same.

He was one of those rare persons, fashioned so completely in the image of his Maker that the temptations and distinctions of the world, commonly so called, were too worthless in his eyes to be considered temptations; and his love and charity were equal to his refinement and moral dignity. He was neither a fanatic nor a sceptic. He was proud of his Christian privileges, and his great ambition was to decorate the sacred temples of his faith by the exercise of his art. Piety, real and unostentatious, produced its natural fruit. Flaxman was never dazzled by false lights, and never bowed to a coarse patronage; he was no tuft hunter—no runner in the train of "our nobility;" no bower to a mere rank which had not the power to ennoble its possessor. His thoughts were as much above the world as his works were in advance of his time; he was HOLY in every thought and deed; Christian in spirit, and in act; meek, because he was *above* all worldly pride and littleness of feeling! Surety we cannot contemplate such excellence too earnestly or too frequently. Youth should be especially careful to erect a high standard; the higher the more worthy of attainment—the more ennobling! Nothing deserves the name of Art that does not elevate—nothing deserves the distinction of Art that is not above the vapours of the world; so should all labour, that they may be able to "look back and blush not." We all look forward with hope, but few can look back with perfect content upon their own actions; some blot or burr—some sad mistake or sin—mars the retrospect; but Flaxman, living to count seventy and two years, could trace his career, year by year, to the time he sat in the little padded chair behind his father's counter, and, blessing God, smile with both heart and lip. I can never forget the awe I felt at Petworth when contemplating his "St. Michael subduing Satan." I have been in the gallery where it stands, at all hours, and seen it in all lights—the ardour and energy of the archangel, contrasted so magnificently with the craft and malignity of the demon, that it was impossible not to feel it as the power of good triumphant over the power of evil. He could not design aught that was not elevated; and perhaps nothing proved the high moral strength of his mind so much, as when, during the brief peace of 1802 he visited Paris to inspect works of Art, refusing to be introduced to the First Consul, because he was the enemy of his king and country. He also, we are told, in the

too brief biography prefixed to his lectures, declined, while there, meeting a celebrated French artist, whose talents he admired, but of whose political conduct and principles he had a just abhorrence; indeed, it was his invariable rule, abroad and at home, to shun with the greatest care the society of persons, however brilliant and clever, when he was convinced that their religious and moral opinions were inimical to the laws of their God and their country: by this conduct he preserved a purity of heart and character rarely to be met with; it was this purity of heart which inspired the delightful cheerfulness and amenity of manner, that won the affection of the young and gay, as well as the respect and friendship of those of equal years.

With a perfect appreciation of the rich treat I was about to enjoy I entered the house, which the good taste of Miss Denman (Mrs. Flaxman's youngest sister) has converted into a shrine—a positive temple of Flaxman art. Relievs and figures, rich as rare, grace the hall and staircase; and when you enter the drawing-room, objects of deep interest dazzle you—dazzle is not the word to express what you must feel, at least what I felt—there was so much of calm and holy beauty, so much of the pure and true on every side, that I was bewildered by excess of enjoyment, and could hardly breathe or speak. The shield of Achilles is like a glory in the midst—that immortal work, the perfection of classic and anatomical knowledge, steeped in the rich poetry of an imagination as pure as it was fervid.

Indeed, any one of the works in that favoured room would stamp its author as a man of genius—any one of them would create a reputation. There was the small model of the archangel Michael and Satan—one of the immortalities of England; the "Acts of Mercy," a Cupid and Psyche of unsurpassed loveliness; a model of Mrs. Tighe's exquisite monument: some that I knew—and to know is to honour—others I had only heard of—all grouped by the hands of affection, and arranged with the taste which is twin-born of knowledge. Then, there are portraits of Mr. and Mrs. Flaxman, by Howard; hers full of intellectual tenderness, the perfection of womanly expression; his, strikingly Miltonic; but, when Miss Denman showed me a miniature of himself, painted by *his own hand*, the likeness to Milton's portraits, and the *ideal* of Milton, was still more startling. This miniature, independent of the interest attached to it as a faithful likeness, is a most singular memento of the versatility of the sculptor's talent.

I pored over the little volume described by Allan Cunningham, and a holy and touching allegory it is. It seems to have been Mr. Flaxman's object to make his "Knight of the Burning Cross" fulfil all the duties which our Saviour enjoined; and it is not, I think, too much to say, that he perfectly succeeded. It is sad indeed to think that this, as well as many others of his glorious sketches, are shut up from the world, which is now becoming more worthy of them. Abroad, an Italian family—I think the Pirolis—support themselves by the sale of engravings taken from his designs.† It was really wonderful to see the delicate cups and chessmen, modelled by Flaxman for Wedgwood—delicate, as if designed by fairy fingers—so pencilled and minute, that they acquire new beauty when examined through a magnifying glass; and then to look at the shield, or the archangel, and remember they were produced by the ONE comprehensive mind and the one powerful, yet delicate hand!

I feel, and feel painfully, how feeble must be all I can say of Mr. Flaxman to those who remember

\* In many things "the child is father to the man." There is an anecdote which relates that, when a very young boy, Mr. Flaxman was so delighted with the romance of "Don Quixote," that he got himself a little sword, and sallied forth into Hyde-park and Kensington-gardens—without a "quire—in search of adventures; but finding none, returned, half heart broken, at meeting no damsel in distress, or any one with whom he could prove his strength and chivalry. This chivalry of spirit remained with him to the last—one of the ennobling principles of his mind.

† Yet so little have they been estimated here, that they may be purchased in this country for something like half the original price, being among the "Reminders" in the establishment of Mr. Bohn in Covent-garden; the outlines from Dante are, we believe, the property of Mr. Nathan, of Bedford-street, Covent-garden, and may be had for two guineas instead of four. What artist, with two guineas in the world he can call his own, would be without them?

him; yet there are many whose hearts would leap high at being able to see what I have seen.

His mortal remains are buried in the church of St. Giles's-in-the-Fields; the inscription on his tomb is simple and true—his character was beyond all eloquence:—

"JOHN FLAXMAN, R.A., P.S., whose mortal life was a constant preparation for a blessed immortality. His angelic spirit returned to the Divine Giver on the 7th of December, 1826, in the 72nd year of his age."

Let us go thither on a holy pilgrimage. Men have travelled thousands of miles to visit shrines dedicated to far less veritable heroes! Let the young Artist stand beside his grave, and make a vow to be GREAT, like him—if he can be; to be GOOD, like him—as he may be!

## OBITUARY.

W. H. PYNE.

THOUGH most of his old familiar friends and contemporaries in Art had quitted the stage before him, there are still many to whom the name of Pyne is associated with pleasant memories, mingled with feelings of affectionate and sincere regard. All the more, therefore, do we regret that we cannot now attempt any narrative as to facts, but must offer the present sketch rather as a characteristical than a biographical one.

Without claiming for him talent of superior kind as an artist, we consider him to have been, in many respects, the *beau idéal* of the artistic character—disinterestedly devoted to Art for its own sake—even to enthusiasm, yet, unfortunately for himself, not gifted with the enthusiasm of application. A sort of constitutional easiness and happy temperament of mind rendered him more indifferent to worldly success, even in his profession, than was consistent with prudence. Otherwise he might, no doubt, have distinguished himself as one of the first water-colour painters of his day, especially in familiar rural landscape scenery and topographical views with old buildings, which he either sketched, or composed with great facility, and with admirable feeling. As it was, he may be reckoned among the first founders of our present English water-colour school, having in some instances invented, in others improved upon, those processes which have advanced that mode of painting, from mere water-colour staining or tinting to one which can compete with oil, for depth of colour and power of effect. Had he but steadily pursued that career he would have earned both profit and distinction for himself, and might further have materially benefited the art itself.

One great advantage which he possessed over most of his contemporaries who treated similar subjects was the ability with which he could put in figures and animals into his landscapes, so as to render them not mere accessories, but of positive interest. Of similar groups and studies of figures he afterwards published a collection, under the title of "Microcosm." The "Royal Residences," another work, or rather speculation of his—for he himself undertook only the literary part—employing C. Wild and other architectural draftsmen to make the drawings—was though executed in a superior manner, as a speculation most unfortunate, for the expenses attending it so far exceeded his means, that he was obliged to dispose of the property at a very great sacrifice, before any profits could be realised by the sale. This affair involved him in difficulties which he never afterwards surmounted.

That work was completed in 1819, in three volumes, imperial 4to., with a series of highly-finished coloured interiors, which stamp it as a splendid *pracht-werk*; but interesting as it is in itself, the literary portion was not very well adapted to such character, since it would have shown itself far more to advantage had it appeared in a humbler form, as a book of pleasant reading for general perusal. As a writer, therefore, he obtained more repute, not to say popularity, by his "Wine and Walnuts," which first appeared shortly afterwards as a series of papers in the *Literary Gazette*, that were so favourably received, that when completed they were republished in a separate form,—two small volumes fraught with interesting anecdote and gossiping relative to English Art and artists in the last century. He next endeavoured to establish a journal of Art, under the title of the

"*Somerset-House Gazette*," but, after carrying it on for some time, was obliged to discontinue it, very much to his own regret, and also that of those who had supported it. Neither did his "Twenty-ninth of May, a tale of the Restoration," add to the literary reputation he had earned by his "Wine and Walnuts;" in that production he had evidently stepped out of his element, nor did he venture upon a second attempt of the kind. In fact, from that time he ceased to appear ostensibly before the public as an author, employing his pen only in the service of periodicals, or in such casual literary occupation as might be offered him.

So long as the "Library of the Fine Arts" continued in existence, he was a pretty constant contributor to that publication; also to Arnold's "Magazine of the Fine Arts." The very latest production of his pen was the series of papers in "Fraser's Magazine," entitled "The Greater and Lesser Stars of Old Pall Mall," a subject most congenial to him, and for which his stores of anecdote gossip well qualified him. In fact, gossip was at once his forte and his foible. He was not so remarkable for conversational as for narrative power; no one could tell a story better or more graphically; and anecdote would beget anecdote, and story story, from him during an entire evening, to the immense gratification of his auditors, but to the suspension of other conversation. He has been known to go out to a breakfast party, and by entering to detain all the company till one o'clock the following morning. But this talent was dearly paid for, by his indulging it too far, to the sacrifice of time and the interruption of study that might have been more profitable. Another foible in him was want of steadiness in his pursuits: he was always projecting some scheme or other—some of them very chimerical ones, as to whose success he was for the time, most sanguine, until a fresher one started up out of his prolific imagination.

Poor Pyne! he was a truly amiable and worthy creature; and it is painful to think that such a man should not have been able to secure a moderate provision for his old age, but was left to close his life in obscurity, and all but actual destitution. He died on the very day which he had chosen for the title of his work, as above mentioned, viz., the 29th of May, in his 74th year.

### CORRESPONDENCE.

#### MODEL OF THE BRITISH MUSEUM.

SIR,—Agreeably surprised by the information given in the *Morning Herald* of last Friday, in a letter from a correspondent, that the model for the facade of the British Museum might now be seen there, and had, for some days past, been visited by a great many architects and artists, I went thither this morning in full expectation of beholding it; but, though after much inquiry I ascertained that there was such model there, under the care of the Secretary, on direct application in that quarter, I learnt that, so far from being publicly shown—or even to those who might request it as a particular favour—it could on no account be seen without an express order from Sir Robert Smirke himself.

It was very absurd on the part of the writer in the *Herald*—perhaps it was intended by him as a hoax—not only to state that the model was publicly exhibited, but to speak of it as if he had actually seen it at the Museum. The only reasonable motive that can be imagined for his doing so is, that it was a stratagem to induce numbers like myself to go and make inquiries after the model, in order that so many applications coming all together might suggest the propriety of doing that which had—very incorrectly, indeed—been reported to have been done, and allowing the model to be inspected. After the wrong in which he has been detected, perhaps little credit ought to be given to the *Herald's* correspondent, in regard to what he says to the model itself, since he has now rendered it very doubtful whether he has seen it at all. Most certainly he is not at all in favour of it, since he condemns it *in toto*, describes it as being a mere "duplicate of the Post-office," and denounces it as a design utterly unworthy of being adopted for so important an occasion. If such be really the case, all the more urgent is the necessity for the model being exhibited forthwith.

Though disappointed in the object of my visit to the Museum, I must own I was not particularly so, since I had some misgiving before I went, it appearing to me that the exhibiting the model was a stretch of liberality hardly to be expected from that quarter, and that it must have been extorted rather than conceded.

Yours, &c.,

ARCHITECTONICUS.

Sept. 25.

#### MODEL-CASTS.

SIR,—Allow me through the medium of your paper to inquire what has become of two very splendid casts presented by Mr. Carpeus some years back to the Royal

Academy, and which acquired a particular interest and value from the circumstances under which they were produced? In order to settle a dispute as to the correctness of the old masters in their representations of the crucifixion, Mr. Carpeus procured the body of a man who had died by a violent death, and while warm had it nailed to a cross and then elevated, so that it might take the form of a person dying under such circumstances. When the body became rigid he had a cast taken from it, and then directed the skin, &c., to be removed; after which he had another cast taken, what is called an anatomical cast, the more clearly to show the facts. With the most laudable desire for the furtherance of Art, he presented these two valuable casts to the Royal Academy, who received them, but have never given their students the benefit or opportunity of seeing them; indeed, it has been said that they remained for years in a dark cellar.

Now, Sir, as high Art seems to be taking its proper place in this country, and as these casts were made for the purpose of elucidating an important truth, I think these inquiries not at present irrelevant.

Yours, &c.,

A. B.

#### THE NATIONAL GALLERY.

SIR,—I venture to send you a few suggestions upon the present "constitution" of the National Gallery, and of the facilities and obstructions met with by young artists; and which most persons concerned in the Arts will consider a subject worthy of great consideration, if not of the first importance.

I may premise by saying, that of "facilities" there is a marvellous lack in the Gallery of the Nation. Now, as public property, it ought to present the very easiest road for aspirants to artistic fame; and I shall proceed to point out its defects, and some improvements even in its present miserable proportions. When the old gallery was in Pall Mall, some idea existed in the brains of the higher powers, that to copy one of the pictures in oil would be a degree below the crime of high treason; or, that the copies so made would be pained off in some quarter or other as originals. The new rule of admitting fifty at a time to copy six months is an improvement; but so paltry a one, that the boon comes to the student in the most graceless fashion, scarcely worth his thanks. Now whether these fifty students make their appearance every Friday and Saturday is a great question: I venture to doubt it. However that may be, and adding the water-colour painters, the rooms are not crowded, nor is any inconvenience discernible. And why all should not paint in the manner most satisfactory to themselves, is extraordinary. If any particular picture should happen to be besieged, and a new comer arrives, he would walk away, or set about some other: nobody is likely to attempt to copy a picture he cannot see; and why as many as can conveniently copy are not allowed, I am at a loss to imagine. An absurd and vexatious rule exists, that those who desire to copy in oil are to send in a specimen of their performance in that mode of painting; and by the same rule, I suppose, an academical must apply in that manner if he wishes to copy. Now I wish to know who sits in judgment, and what is the object? To argue sensibly and reasonably, young students cannot paint at all, know nothing about it, and go there to learn. But, it appears, somebody must see that they can paint very well before they begin to learn; and a youth sends in his picture, perhaps miserable; and if he happens to be of a constitution sensible of his own deficiencies, what must be the state of his feelings on the subject? To avoid this, he has the cruel alternative of murdering Rubens and Titian in water-colours; a useless affair to young beginners, such works being only valuable to the advanced painter, and then only as effects or arrangements of colours. The young artist can learn no great principles by that course of study: it is, therefore, a cruelty and an injury to oblige him to study in that manner; it would be far better to tell him to go elsewhere, and, indeed, most do resort to that, and go to Paris; the Louvre is crowded with English students, and a disgraceful fact it is to this metropolis. And why do they go there? Because they can study by applying to the Minister of the Interior, the director of the gallery, or having some recommendation from an artist of known respectability. I am aware, Sir, what the reply would be by those who are the directors of this system: "We have not sufficient accommodation." It is true that might be better, but I maintain that no inconvenience would result from allowing students to study in their own fashion. The Gallery never is over full, and never will be; or if it is, I maintain that the water-colourists should be excluded and not the oil, the originals being most of them in that vehicle, they ought, "to do the copyist any good," to be done in the same manner.

I repeat, that as many as can conveniently see a picture are entitled to copy it; but if any dispute should arise, some responsible person ought to be in the Gallery to arbitrate. But I am bold to say that would be of rare occurrence; the presence of ladies, and the decorum always observed in places of public study, are sufficient preventives on that score.

Yours, &c.,

A STUDENT IN THE GALLERY.

#### ART IN THE PROVINCES.

DUBLIN.—ROYAL IRISH ART-UNION.—A meeting for the annual distribution of Prizes has been held in the "Theatre of the Royal Dublin Society House," at which the Lord Mayor presided. The Hon. Secretary, Stewart Blacker, read the Report. It gave a most cheering account of the progress and present condition of the Society, and stated that near £5000 had been placed at the disposal of the Committee for the objects the Society had in view. The Report of the improvement in exhibitions praised highly the measure of reducing the charge for season tickets, and recommended the practice as useful and lucrative to other exhibitions of a similar kind. The Report then adverted strongly to the high prices affixed to their works by the artists, upwards of £14,000 being demanded for the works this year exhibited, of which there were 580 for sale; and besought of them, for the sake of encouraging the growing taste of modern Art, not to put such a complete check on their acquisition by the public. The Report then gave a satisfactory account of the engravings in progress: the last proof of the "Young Mendicants" was exhibited, and elicited much admiration. It was announced that the engraving for 1844 would be from a leading and humorous work by Mulready. After announcing the names of the artists who had gained the premiums—for Lithography, H. O'Neill and G. Du Noyer; Modelling, T. Farrell and J. Kirk, jun.; Wood-engraving, W. Walker; Gem engraving, Flavelle, of Kilkenny—the Report noticed the plan proposed for the formation of a Society, having for its object a National Gallery for Ireland, and recommended it strongly to the notice of the members, which called forth much applause. The drawing then commenced. We subjoin a list of the prizes of £15 and upwards. Those marked a are the productions of Irish artists, or of artists resident in Ireland.

'Scene on the Thames—Distant View of Erith,' by J. Tennant, £100. 'Statues of the Vocal Memnon—Thebes—Sunrise,' by D. Roberts, £100. a 'The Rescue' (group in marble), by C. Panormo, £80. a 'The Irish Peasant's Grave,' by J. Tracy, £70. a 'Hermia and Helena,' by W. Fisher, £60. a 'Love; or Paint Heart never won Fair Lady,' by N. J. Crowley, £60. 'Coast Scene, near Bangor, N. Wales,' by Montague Stanley, £60. a 'Lenaune Harbour, Connemara,' by George Colomb, £55. a 'The Rose, Sharnock, and Thistle' (large-sized miniature on ivory), by B. Mulrennin, £50. a 'Bridge and Village of Splügen' (water colour), by G. A. Frapp, £45. a 'The Sand Bank—Ferrying for Rabbits,' by F. B. Lee, £40. a 'A Ship on Shore, Scarborough Head,' by M. Kendrick, £40. 'The Muscle Gatherers,' by Alex. Fraser, £40. a 'The Impatient Sitter,' by J. Haverly, £40. a 'On the River Tees,' by T. Creswick, £38. 'Landscape,' by H. Jutsum, £35. a 'Child at Play' (marble), by F. Burnet, £35. a 'Cladding Fishermen, Galway,' G. Sharp, £35. a 'Holy Cross Abbey' (water colour), by Edw. Hays, £35. a 'On the Midway,' by H. J. H. Boddington, £30. a 'View of Powerscourt' (water colour), by S. F. Brooks, £30. a 'An Old Mill, S. Wales,' by J. Wilson, £30. 'Scottish Border—Peel Tower,' by D. O. Hill, £30. 'View of Clifton from Leigh Down,' by C. Branwhite, £30. a 'Clifton Suspension Bridge,' by C. Branwhite, £30. a 'A Neapolitan Filatrice,' by E. W. Dallas, £30. a 'The Abduction,' by C. Grey, £30. a 'The Catty Pipe,' by Catterson Smith, £27. a 'The Girl Reading' (cast), by P. M'Dowell, £25. a 'Giri at Prayer' (cast), by P. M'Dowell, £25. a 'Fishing on the Grand Bank, Newfoundland,' by G. Atkinson, £25. a 'View of Cat-skill Mountains,' by W. G. Wall, £25. a 'Boys Robbing an Apple Stall,' by C. Smith, £25. 'On the Thames, near Purfleet,' by J. Tennant, £25. 'Good News—Candlelight Effect,' by T. Clater, £25. a 'Tubernia, &c., Lough Corrib,' by G. Colomb, £25. 'Valley of Luchon—Pyrenes in the distance' (water colour), by W. Oliver, £25. 'The Town of Angers,' by W. E. Deighton, £25. a 'The Master's Footstep,' by C. Grey, £20. a 'Carting Timber,' by J. Stark, £20. 'Scene near Windsor,' by F. W. Watts, £20. a 'The Burning of Don Quixote's Library,' by J. Mahony, £20. a 'Flowers from Nature,' by Mrs. Gonne, £20. 'Slyhead and Scawfell Pikes, Cumberland,' by W. Collingwood, £20. a 'Woody Landscape,' by H. J. Boddington, £20. 'The Village Fairies,' by H. J. Boddington, £20. a 'Cattle Reposing,' by T. S. Cooper, £20. 'Pleasure and Pain,' by Alexander Keith, £20. 'Seashore near Yarmouth—Moonlight,' by J. B. Crome, £20. a 'La Jeune Artiste,' by T. J. Fowler, £20. 'On the Look-out,' by T. S. Marshall, £20. 'Heath near Warwick—Gloomy Weather,' by H. H. Horsely, £20. a 'Landscape Composition,' by W. Gillard, £20. a 'Ancient Dava,' by G. Sharp, £15. a 'View on the Loran, near Belfast,' by H. Fraser, £15. a 'Scene near Bayswater,' by A. Nicholl, £15. a 'Study of Beech and Elm Trees, Phoenix Park,' by W. Howla, £15. 'Distant View of the Island of Arran,' by H. McCullagh, £15. 'On the Frome, near Bristol' (water colour), by

G. A. Fripp, £15. a 'The New Pier, Boulogne-sur-Mer,' by W. Keadrick, £15. 'Hungarian Peasants at St. Stephen's Church, Vienna,' by J. Zeitter, £15. ' Windsor on the Thames,' by F. W. Watts, £15. 'Katsenelenbogen Castle, on the Rhine,' by J. B. Crome, £15. 'On the Sands, Burlington Bay, Yorkshire,' by A. Clint, £15. 'The Turkish Mother,' by A. J. Woolmer, £15. 'Peasant Girls,' by Thomas Cane, £15. 'Coast Scene near Lynmouth,' by S. Walters, £15. a 'Above Blackrock Castle, on the Lee,' by G. Atkinson, £15. 'Dead Game,' by G. Stephens, £15. a 'Landscape, Composition,' by J. H. Mulcahy, £15. 'Landscape,' by J. Stark, £15.

After the drawing, Sir George Hodson, Bart., moved the thanks of the meeting to Stewart Blacker, Esq., the Hon. Sec. He said, "As a Vice-President of this Society, and an active member of the Committee, I have had frequent opportunities of witnessing his unceasing care of our interests; and it is only at a great sacrifice of time, and by the bringing to bear upon the cause in hand great tact and talent, that our Society could have been placed in so flourishing a position, and the aspect of the Fine Arts in this country have undergone so reviving a change, and hold forth so cheering a prospect as they present at this moment. All might reflect with pride that they had a share in effecting so happy a consummation; but to Mr. Blacker is due the credit not only of originating this institution, but of working it to its present highly promising condition." Mr. Blacker, in returning thanks, adverted to his favourite plan of establishing a National Gallery in Ireland, and moved, "That highly approving of the principle of forming a permanent collection of the works of Art, to be open to the public as models and objects of study, we recommend our members to give every assistance in their power towards the proposed Society for the formation of a National Gallery for Ireland, consistent with the regulations of this Institution."

[We rejoice to record the satisfactory progress of this Society; and, considering the good it is doing in Ireland, we are little disposed to pay much attention to certain complaints that have reached us concerning the management. Ireland has certainly always been conspicuous for the perpetration of "Jobs"—jobs by which public benefit was sacrificed to individual gain; but we have no hesitation in saying, that this Society appears to us to be comparatively pure from suspicion of interested motives. We say "comparatively," for of a surety "favouritism" has led to the commission of acts that cannot be—and never has been attempted to be—justified. We allude, in particular, to the gift of £100 out of the Society's funds to a Mr. Burton, for the (so called) "copyright" of a water-colour drawing, which must inevitably make a bad print. This most unwise "bit of private patronage" has been followed, as might have been expected, by the usual results. This Mr. Burton has since done nothing; the last two exhibitions in Dublin have contained of his only some likeness-drawings; he has made no effort whatsoever to show that the £100 was well or ill bestowed. "God preserve us from our friends" is a prayer peculiarly applicable to the Irish. Mr. Burton might have succeeded in becoming, or remaining, a "great man" in Ireland, if his "friends" in the Royal Irish Art-Union had not helped him to a hundred pounds out of the general fund. As it is, even there, he has dwindled down to nothing.]

LIVERPOOL AND BIRMINGHAM.—Circumstances this month prevent our giving more than a mere announcement that the annual exhibitions of works by British Artists are both open at Liverpool and Birmingham; both, we understand, are of the very highest character, and both are likely to succeed in being greatly beneficial to the exhibitors, and profitable to the public.

BRISTOL.—There is at present an exhibition of paintings by old masters in the "Institution" of this city. We learn from one of the Bristol papers that "among its most interesting objects may be reckoned the small miniature of our celebrated poet, John Milton, by Walker, which was purchased at Rome by its present proprietor in 1786, and which, after a careful comparison with the existing engravings, was pronounced by Mr. Cosway, Mr. Barry, Sir William Beachy, Sir Thomas Lawrence, Mr. Blake, and Mr. Stothard, not only as one of the finest miniatures in oil colours they had ever seen, but as an undoubted likeness of the poet: and any one may see, by

confronting it with the engraving by Caroline Watson of the well-known portrait once in the possession of Sir Joshua Reynolds, its perfect resemblance, except that this picture represents him at an earlier period of his life, probably at the time he visited Italy."

### THE LATE RICHARD DADD.

ALAS! we must so preface the name of a youth of genius that promised to do honour to the world; for, although the grave has not actually closed over him, he must be classed among the dead. Those who regarded, respected, or loved him, must anticipate such an event as his restoration to a perfectly sane state only as an additional calamity; and pray, rather, that consciousness may be mercifully withheld from him; for a return to reason would infer a condition which we cannot contemplate without renewed horror.

Alas! it is, indeed, a heavy penalty—that which poor humanity pays for enjoying the gift of a fertile imagination.

"The brain too finely wrought  
Preys on itself, and is consumed by thought!"

The history of the human mind, as exemplified by those who have exercised its nobler attributes, presents a melancholy record of high hopes or miserable disappointments—both too often ending alike in madness. Cases come before us very frequently, upon which we can offer no remark without invading the circle of private life and augmenting private sorrow; the memory of them is consequently permitted to die away, for it is impossible to ask for the poor victim a public expression of grief. The awful fate of Richard Dadd, however, calls for no such delicacy. His madness, alas! has obtained notoriety by one of the most appalling events recorded in the history of modern times. It is needless to say how heavily the theme burthens our pen.

It is our duty to print some particulars of the brief life of this young man: it has been done by the press generally, and must be done by us. We shall borrow largely from an article published in the *Pictorial Times*, written by one whose "facts" may be relied upon.

"It was impossible for any youth to commence a career in Art with greater certainty of success than poor Richard Dadd, whose crime, the undoubted result of insanity, still occupies so much of public attention. His family are universally respected: the young painter's grandfather held the situation of timber-master in Chatham Dockyard for a considerable period; and it is now some thirty years since Mr. Robert Dadd commenced business in High-street, Chatham, as a chemist, though he was better known as a lecturer on chemistry and geology, and is remembered in his native county as a good public speaker, a man of extensive information, and high moral character. Not very long since he removed with his family to Suffolk-street, Pall-mall East, having purchased a business connected with objects of *virtu*, and where he most successfully practised the restoration of *or-molu*, an art supposed to be confined to the French capital.

"Richard, his third son, his pride and hope, was born on the 1st of August, 1817, at Chatham, and received his education at the grammar-school of Rochester. There is little doubt that he imbibed his early love of Art from his boyish acquaintance with the rich and varied scenery of his native county. We fancy that in many of his early sketches we can trace outlines of the dells and noble trees in his favourite park of Cobham, the very place where his young genius received its inspiration, and where his fearful insanity evinced its overwhelming power.

"Of all our English counties, Kent is the best calculated to imbue an artist's mind with the overflowing richness of Nature and of Art; every nook and swell, upland and lowland, every farm-house, cottage, and shed, is a thing of pictorial beauty, such as no other country but England can furnish, and no other county so happily illustrate and combine. The parks and ancient residences of England's barons impart the dignity of history to the scene, while the navies of England, with the powers that pay us homage, pass along the mighty river that skirts its shores: such scenes might well aid and strengthen his imagination, while they imparted a healthy vigour to his pencil; and when his

father removed to London, he found himself at once in the midst of the advantages which polish and refine. At the Royal Academy he was noted for his attention, good temper, and diligence, and gained three medals."

"He began drawing when about thirteen, and many of his drawings were much admired before he attempted to paint in oils. His first picture was of shipping; his first exhibited picture at the Suffolk-street Gallery was his brother's dog; but the first production of his pencil which we remember as connected with his name, was 'Alfred.' He first studied at the Museum, and afterwards at the Royal Academy. He took especial delight in portraying fairies. In 1811, the work which may even now be considered his most successful, 'Titian asleep,' was exhibited at the Royal Academy. Next appeared a 'Puck,' that excited universal admiration at the exhibition of British Artists.

"Mr. Farrar, of Wardour-street, bought one of his first efforts, and poor Power purchased his 'Don Quixote' out of the Suffolk-street Gallery. One of the Manchester publishers (Mr. Agnew) bought one or two of the later creations of his pencil; but his principal work was painting a series of pictures from 'Manfred' and the 'Jerusalem Delivered,' for Lord Foley. These evince the power and variety of his conceptions; they are more than 100 in number. His friend Mr. Parnell executed the decorations of the house, and produced most beautiful effects in combination with the studies of the artist. Thus the road to the young painter's fame and fortune became wide and smooth; his mind stored with the honeyed treasures of Nature from its earliest memory; his father proud of his talents, and directing them with skill and kindness; his family intelligent and affectionate; a happy and prosperous home, and a standing above his years in the eyes of his country!

"In the spring of 1842, he agreed, at the request of Mr. S. C. Hall, to illustrate for the 'Book of British Ballads,' the ballad of 'Robin Goodfellow,' the editor selecting this as one of those best suited to his peculiar talent; and Mr. Dadd made the drawings on the wood—the first time he had ever dealt with that material. His designs abounded in brilliant fancy; he took much pleasure in the task; and since his return—in fact a few days before the event which has caused such universal sorrow—he wrote to say how pleased he should be to illustrate another ballad for the second volume.

"On the 16th July, 1842, he left London for Egypt with Sir Thomas Phillips (knighted for his gallantry at Newport), to whom he was introduced by his steady friend, David Roberts, R.A.

"Many of his letters from the East are well written and interesting; but he quitted Sir Thomas Phillips suddenly, and in a manner very unaccountable, manifesting feelings that could be mistaken by no one for other than tokens of incipient insanity. He had not been at home a week, before his old companions perceived this change; the necessity for watching him carefully was canvassed by them, while every week strengthened the impression that his mind was destined to become a wreck. None, indeed, anticipated, or could have anticipated, so horrible a termination to the struggle between reason and madness; for a person more invariably gentle, kind, considerate, and affectionate, did not exist. He was emphatically one who could not deliberately injure a fly. Immediately after his arrival in London, he commenced working; and, strange to say, the pictures then produced are as admirable in design and execution as his earlier works. This is evidenced by a picture of 'Arabs,' sent to one of the provincial exhibitions—Liverpool—a work of rare and singular merit. The cartoon contributed by him to Westminster Hall was commenced and completed in thirty-two hours. It was sent in against the earnest entreaties of his family and friends, who knew full well that it could do his reputation no service. For ourselves, when we saw it, we considered it as evidence of that insanity of which we had heard so many rumours, and our apprehensions for his ultimate fate increased.

"A distinguished member of the Royal Academy, with whom we conversed above a year ago concerning the promising genius of poor Dadd, informed us that he had been the most regular and attentive student who had ever studied in the schools of the Academy, adding, "Other young men I have sometimes missed; but Dadd never." He agreed with us in conceiving Dadd as foremost among the rising young men of the age.

"His poor father was the last to put faith in the belief so general among his friends. He consented, indeed, to consult Dr. Sutherland, who advised quiet and care; but he resolutely resisted the conviction that the perplexing proofs he received of his son's state of mind were other than temporary 'heats of the brain,' that a calm residence at home would surely subdue. Mr. Dadd, therefore, unhappily refused to place his son under any restraint, and resolved, in an evil hour, to be himself his keeper. There is now no doubt that (as usual in such cases) insanity had induced a hatred of his best friend—the son had persuaded himself that the father was a fiend who had set on other fiends to torment him. Soon after his return from the East, indeed, he said to a dear and intimate friend, that although many fiends had been about him on his voyage home, the Great Fiend of all he had as yet never seen, but gave a frightful intimation that he was looking for him. His insane thoughts, however, he communicated to very few. He became far more reserved than he used to be; yet manifested a degree of shrewdness and sharpness about little things utterly foreign to his former character. The very morning of the tragedy he called upon one of his intimate friends, and said he had been rather idle for some days; that he should go on the Continent, and requested he would give him a letter to enable him to get a passport. His friend said he required no letter; and he replied, 'Well, if I do not, perhaps you will give me one to say you know me, and that I am respectable.' His friend, who knew well his state of mind, did not like to refuse him, and did so; but in his haste he left out a word. Dadd's keen eye perceived the omission, and instantly suggested its insertion. The friend to whom we refer parted from him on this morning of the fatal day, with sad misgivings that his mind was rapidly perishing.

"How solemnly true it is, that 'the ways of Heaven are dark and intricate.' It seems but a few months since he who is now a wanderer, was with us, here, in this very room; his full rich voice, as full of music as a joy-bell, and his sportive humour, exciting innocent mirth. All who knew him speak of the exceeding gentleness and sweetness of his nature, which, though sensitive, was anything but irritable; he was satisfied with small praise for himself, but ready and lavish of his praise of others; his studio was more orderly than artists' studios generally are, and he had a large folding screen therein, carefully canvassed, on which he noted down his thoughts—a artists note them—with their pencils. We remember being greatly delighted with several of the sketches; and if he persisted in his plan, the screen must be of exceeding value.

"The dead are at peace; but we mourn the living sorrow that remains to an amiable family; truly theirs is a trial which nothing but God's great strength of mercy can alleviate. We mourn the mental death of the young man, into whose brain the hot sun of the East is believed to have burnt insanity. We have written this brief unsatisfactory record with much pain, for we esteemed the youth as a friend, and honoured him as one of those shining lights which brighten Art. No living artist possessed a more vivid or delicate imagination; and there is no doubt that the excess of this quality predisposes to the disease which has triumphed over him. When we call to mind his gentle, tender, and affectionate nature; the bright smile; the cheerful voice; the eyes at one moment almost wild with the varied lights of mirth and fancy, and then so deep and solemn in their thoughtfulness; when we remember the high, broad, orb-like forehead, a very castle of intelligence—we wonder where can the stronghold of reason be, when it deserts such an habitation."

The statements here made are, we have reason to know, perfectly correct. In the expressions of sympathy which accompany them we cordially join. We have no design to give a history of the most melancholy event that has blighted all our hopes of the young artist; nor do we wish to add much to the account here given. The name of David Roberts is mentioned in the course of this biography. The friendship which that excellent gentleman and accomplished artist bore towards the unhappy youth, whom he had known almost from childhood, was, we are fully aware, a great stimulus to his exertions in the profession of which he was already an ornament. While poor Dadd was

making the tour, which, alas! sowed the seeds of insanity, he wrote some letters to his esteemed friend, which Mr. Roberts kindly placed at our disposal several months ago: they remained in our drawer for insertion about this period, when subjects of pressing interest in the Arts grew slack. We have asked and obtained a renewed permission to print them, for under altered circumstances this was necessary. But with how different a feeling must we publish them now; and how deep a melancholy must pervade the minds of those who now peruse them! They are evidences of his astonishing industry, close observation, untiring energy, and enthusiastic love of his profession. All the friends of poor Richard Dadd, among whom we were proud to class ourselves, bear testimony to the gentleness of his disposition and the goodness of his heart. His abilities were of the very highest order; it is our lot to have seen and appreciated them from the commencement of his career; in foretelling his future fame, we little anticipated so grievous a termination to so many *sure* hopes.

Symptoms of his insanity were very apparent soon after his arrival from the East. The appointment to travel with Sir Thomas Phillips was procured for him by his friend David Roberts; it was in every way (or rather it *seemed* to be, for who can read the future?) most advantageous. We know how heartily the young painter rejoiced at the prospect thus opened to him—with what joyful anticipations he left England—what a glorious and triumphant result he expected from the store he should gather for working up through his whole life. We must pass over the sad subject rapidly. In Egypt he had an attack which at the time excited little alarm, yet it was a *coup-de-soleil*, always dangerous. On his way home symptoms of aberration of mind appeared to his respected companion, who thought it necessary to obtain medical advice; they parted in Paris; from that city Dadd posted all the way to Calais, and subsequently from Dover to London; so that on his arrival here, his money (which was considerable) was all spent.

The letters we here publish show that unfortunately, from the rapidity with which the various countries were traversed—the continual succession of objects, all of exciting interest, and the last ever of interest the greatest—proved too much for his mind; over-exertion tore it; and at length it became a total wreck.

We must now number among the departed, one of the kindest and the best, as well as the most gifted, of the children of genius it has ever been our lot to know.

The first letter of poor Dadd to his excellent and valuable friend is dated from Athens, Sept. 4, 1842.

"At Venice we stayed five days, and were occupied nearly the whole time in going from place to place seeing sights; and some of them were magnificent, and some the merest trash that we could set eyes on.

"The pictures of Paul Veronese and Tintoretto are the most marvellous things imaginable in respect of execution and colour, and the size and number of their works are surprising. Titian also is seen to great advantage; and Bellini, Bonifazio, and others of the Venetian school, can only be understood by a visit to this place. I had just time enough to make a blot of Peter Martyr, and a picture of a miracle of St. Mark by Tintoretto: the last one of the most fascinating works I ever beheld. The modern exhibition, which was opened whilst we were there, is held in the Academy, amongst the fine works of the old masters; and a most unfortunate thing it is for the moderns, for their poverty looks doubly wretched, and one is insensibly led to wonder how, with such fine productions about them, they can produce such infamous daubs. The drawings from the antique and life by the students, are exhibited to the public at the same time, and seem to occupy much of the attention of the visitors: the whole affair is gratuitous, and, may I add, so it ought to be. The Church of St. Mark here, is a most interesting specimen of the Byzantine style, and one of the most gorgeous temples conceivable; no material is used except the most costly, and the variety of marbles and mosaics is surprising. The ceiling, which is a series of domes, in form of a cross, is paved with gold mosaic, which is slightly tarnished; and upon the sides of the wall are representations

of different portions of biblical history in colours. The altars are rich to excess; and with the lights burning, priests officiating, and people kneeling about the place, present an extraordinary sight to the eye. The lower class of people here are very picturesque, and the water-carriers especially so: their freedom of motion and erect carriage are striking, and, beside the city itself, seem to me all that is left of the former pride of Venice. It may seem an absurd remark, but they (the water-carriers) are so distinct from all the rest about them, that the idea suggests itself naturally enough.

"I shall not attempt to describe to you the feelings with which I first set eyes on this wonderful place, but may venture to say that I felt sorry I was obliged to leave it, having done so little besides looking at it. The gondoliers are the greatest scamps breathing; and in going to Mestri from Venice, we had a scene with the two who conveyed us: they swore and shouted at each other with a twenty-horse power, and one of them with his broad-bladed oar struck at the other, but missed him by a few inches, or he certainly would have been heavily visited. Notwithstanding that they nearly upset us, and occasioned all the inconvenience in their power, yet, at the end of the voyage, they asked for a gratuity, and grinned at their own impudence in doing so—of course they were not satisfied. Whilst upon this I may say, that surely there never was anything equal to the assurance with which all foreigners plunder travellers: the slightest thing that is done for you, they expect payment for; and when you leave an hotel, they all swarm about you with greedy looks and clutching fingers, anxious, like their own detestable fleas and mosquitoes—to which they may be compared—to get the last drop out of you. But you have experienced all this without doubt, and I must trust that you will excuse this, as one excuses a safety-valve in a steam-engine.

"At Bologna we saw the leaning towers and the Academy of Arts, in which is Raffaello's 'St. Cecilia,' and some of Guido's finest works; indeed, this latter artist is to me the greatest ornament of the gallery, and far exceeds his masters the Caracci, of whom also there are some fine specimens in the city. I saw here a fresco by Guido, said to be his *chef d'œuvre*, and very fine it is too; but I think it is not equal to his oil pictures. With regard to frescoes, of which I have seen many very celebrated, you will perhaps not think me impertinent in saying that it seems much inferior to oil in capability and duration. I have observed repeatedly that the oil pictures of the same master are in the finest preservation, and their frescoes in so ruinous a condition as scarcely to be visible. It is true that we have not seen Rome or Florence yet, and for that reason may not have sufficient grounds for advancing such an opinion; but, without any exception, I should give the preference to oil in all the cities we have visited; and I think the facts will bear me out, whether considered as to design, expression, truth to nature, colour, or durability. The Venetians had the good taste to prefer oil, and the consequence is, that they possess a series of pictures representing her great deeds, which are pure and bright and perfect as when completed. These are monuments of her glory that at once come home to your feelings, and are widely different from the frescoes of Italy, where one is obliged to institute a reasoning process in the mind, which *may end* in the conclusion that there *may* be something good in it. The pure daylight of Paul Veronese, and surpassing brilliancy of colour, show clearly enough that lightness of effect depends on the artist and not the material; and, to speak truly, I have seen no frescoes possessing such luminous power as his works.

"From Bologna we proceeded down the east coast to Ancona, where we embarked for Patras. At Ancona there is a fine Roman arch on the quay; and the Mole, which is Roman, is in good preservation, although it is small. This place will always be associated in my mind with knaves and cheats. There is a tolerable trade at this place, and it is increasing I believe. The streets and people are very picturesque, and there seems to be a great abundance of priests whose faces do not indicate great self-denial. We touched at Corfu, and stopped here long enough to enable us to make a trip into the island. On landing we at once entered upon a scene of a description that baffles me. It seemed a large assortment, or menagerie, of pompous ruffians, splendid savages, grubby finery, wild

costume, long matted hair, dark complexions, and noisy shopkeepers, styed in filth, all their apparels looking like makeshifts: these, mixed with English, soldiers and civilians, Italians, donkeys, mules, and strange half-naked children, quite bewildered me, and I knew not which to look at first. Upon recovering I pulled out my sketch-book to secure some reminiscences of costume, and immediately I was surrounded by the whole market. I never saw such an assemblage of deliciously-villainous faces: they grinned, glowered, and exhibited every variety of curiosity. Oh, such expression! oh, such heads! enough to turn the brain of an artist. Having sketched what I desired, I moved off only to be followed by a troop of boys and men about fifty or sixty in number, and I in modesty dived into all sorts of miserable alleys and back ways to avoid them; but alas! I might as well have tried to get rid of my own shadow. All my efforts could secure me but little of what I saw, as the moment I began sketching some kind body would inform the person, and raise his curiosity to see his picture. Some looked at me with great suspicion, whilst others examined me as a species of curiosity, and—but I must wait my return to inform you of more. Patras is a miserable town, but one of the most flourishing in Greece. At this place we hired a boat to take us to Scala, in the Bay of Crissa, which is an arm of the sea of Corinth, our object being a visit to Castri or Delphi, the site of the celebrated temple and city. We visited the Castalian Fountain, and drank of its inspiring waters. Alas! how is this place changed! Where formerly the priestess raved out the oracle of the deity, now angry washerwomen rave out an intolerable jargon of abuse at each other. The waters, once deemed full of inspiration, are now full of frogs and water-cresses; and I think, from the repute in which the place is held by the people of the present day, that the goddess might be obliged to sell those same water-cresses for her living. From this we went to Vertizza, where there is nothing to be seen; and thence to Magaspelon, one of the most singular places we have seen hitherto. This place I shall be able to describe when I return, as I fear I have no room in this. Thence we proceeded through some fine scenery to a place called Fara, a miserable khan, where we contrived to pass the night. Thence to Tripolizza, and thence to Argos: near this place are the ruins of Tyrius and Mycene, both of which we visited; and then proceeded on our route to Corinth, where there is but little left of its antiquities. Our next place of rest was Megara, and Athens the next. Greece is an unhappy country to all appearance, and I think I have nowhere seen so much misery as here. The peasants are but little above the condition of savages, and are as ignorant nearly. The country is exquisitely beautiful, although its beauty consists in barren mountains and rocky glens. There is but little scope for the husbandmen, and his efforts are very rude. Of Athens it may be said to be struggling with ruin, ancient and modern, and with but little success; the people live in a strange way, and seem to hug their filth and dirty habits. Yesterday we saw the ceremony of burying the bishop, who died the day before. He was carried in procession clad in his robes, and his face exposed. On his head was his crown, and in his hand his staff.

\* \* \* \* \*

The following letter is dated "Damascus, Nov. 5, 1842."

"As you promised me before starting, the interest of these places is intense. When one enters the streets, the quantity of character is distracting, so much so as to hinder me from sketching, for I could not make up my mind what to do amid so much to be done. Asia Minor has been the source of much pleasure to me; and the cities, with their singular tombs, would, I am certain, have proved the source of as much to you. The site of their enormous ruins is remarkable for the romantic and grand. One thing cannot fail to suggest itself to the mind, namely, the great wealth and power of the people who could create such works. The tombs cut from the solid rock are of curious design, and seem all, or most of them, to be destined to contain three bodies. At Maeri are some of elaborate work, and those cut into the rock are more beautiful, or, rather, more architectural than the others we have seen. But it is at Xanthus the most ornamental of their

works are to be found; and you will, doubtless, ere long, see some of the sculpture that has been taken thence, under the superintendence of Mr. Fellows. Whatever may be the origin of their school of Art, it bears, in some instances, a strong resemblance to Egyptian works; and I have seen drawings made by a Mr. Forbes, and have sketched a sculptured tomb, that leave but little doubt on my mind, as far as resemblance can do away with it. But, as the learned are at variance on this point, it would ill become me to venture an opinion upon the matter. At Xanthus the tombs are chiefly built, and the sarcophagi proved a source of wealth in Art superior to that of any other in the parts hitherto explored by travellers. Pinara is a most extraordinary place; the rocks, many hundred feet high, tower above the city, and their face is covered with the excavations of the tombs. Nothing can be more extraordinary than these tombs. The situation and design are singular to a degree. Those at Maeri, which I spoke of above, are of a low Ionic order, and yet the execution of the work is of a superior description. The theatre here is in fine preservation, and the arched vomitories are tolerably perfect; little of the proscenium remains, but the seats are well enough. Around about it are the sculptured relics of other large edifices—sculptured I say, because nothing of them remains but that part which is cut in the solid rock. The sea washes the shore nearly close to the entrance of the theatre; and across the bay you may still see the ruins of another more modern city, called by the same name, but which, I believe, is not worthy of attention at all, considering it architecturally. The plain and mountains about the city are exquisitely beautiful; and the Masi-cyths range of snow mountains, when first we caught sight of it, was enough to make one leap out of one's skin. Owing to the heat of these climates, the snow is not persistent for the whole year; and the sight of their bald summits, glowing and gleaming in the setting sun, would wake all the artist in you, or indeed in anybody with the least love of nature. By artist, understand me as wishing to say enthusiast, for no man is an artist without a strong feeling of enthusiasm for his profession. I am not afraid to repeat your own phrase to you, because I am sure that it is true, as I always find the love of Art strongest in me when most enthusiasm would predominate. You see that I give you back your own speech merely for the pleasure of flattering myself—a weakness I trust to your kindness to excuse. But I should really fear to say how much I feel on seeing all the treasures of earth I have so lately witnessed—the big cities and big mountains, the big clouds and deep blue sky, where seems to be written in brightest colours the symbol of eternity. See now if my enthusiasm has not already betrayed me into writing what it would puzzle me to explain.

"The traveller in Asia Minor must be struck by the great natural capabilities of the country, and the little that man does to improve what nature has so bounteously spread out for him. The valleys between some of the mountains, indeed, all that I've seen are fertile in the extreme; and we saw the heaviest crops of Indian corn growing upon land that is but indifferently cultivated. The mountain scenery is very fine, the pine and fir trees grow in great abundance. The scenes amongst them and from their tops are of that nature that I have seen sometimes painted though rarely but never described; to look at them makes the heart expand, and to dwell amongst them must be to have thoughts as great and good as the objects themselves. From the citadel of Hos we enjoyed a fine view by the morning sunlight; and as we stood in the ruins of a Roman building of vast proportions, we might almost fancy ourselves turned into Romans: at all events I was very romantic. The mode of travelling with us was as follows:—We were mostly up at daybreak, and having breakfasted on coffee, eggs, and such bread as the country afforded, we mounted our horses and departed our way. Perhaps our journey would last for eight, ten, twelve hours; the last rarely, and I need not say to you, who are accustomed to travel, how many little incidents would occur on the road. For instance, on leaving Smyrna, or rather the day after, we met some hundred and fifty camels on their way to Smyrna, with their bells all tinkling, and the drivers as gay as bright colours could make them. Then, again, we might meet with a group of shepherds in the plains, living in their black hair tents,

and the children nearly as naked as they were born. Perhaps a village returning from their summer habitation in the mountains to pass the cold season in the plain; this is a sight worth particular attention, as they would, of course, bear all their goods and chattels about them. When I saw the party I mention, they were crossing a stream, with camels, horses, and the children and women riding the asses; or perhaps the lusty women were stoutly trudging their way, a group of camel-drivers resting under the shadow of a plane tree, their cattle lying about, as you will easily fancy. A woman at a well, children playing, or a thousand things to arrest the attention, and which all seemed to slip away from me as if unreal—as if they were the pageants of a dream, rather than a substantial reality; and yet I do not think that I am much to be blamed, for a body can't very well sketch riding on horseback. About dark we generally reached the place of our lodgment, and some of them were queer enough: a ruined house which could scarcely hold its rickety sides together, a mud hut, or greasy Greek house, served to shelter us for the night; and we often were and are the victims of the hungriest fleas in existence. But these things give a gusto to travel, and to yourself must doubtless be the subject of many pleasant thoughts. This you must see would allow but little opportunity for employing my pencil; and as to the use of colour, it is next to impossibility. Of Asia Minor, with the exception of the ports of Smyrna, Boudroon, and Scala Nuova, it may be said (of the parts we visited) that it is one vast ruin, even to the clothes on most of the peasants' backs. We cannot, however, complain of their hospitality, which seemed ready enough, generally speaking; but we found that they, as well as most other bodies, like the colour of money.

"The free bearing of the men is very striking, and we saw very many that would have become a senate, so much of dignity do they possess. The women, too, are women such as Raffaele and Michael Angelo painted, and as free from affectation. They carry themselves perfectly upright, and walk with no mincing gait, but with such a gait as a rational creature should use. I like these points about them much; as to me, it conveys a notion of truthfulness of character, a thing more to be prized than all the boarding-school accomplishments that ever were acquired. We left the shores of this beautiful celebrated land in a cutter for the Island of Rhodes, which place we landed at, after twenty-four hours' passage from the port of Maeri. The route we made through the country was this:—Smyrna to Sedikni, a small village, two hours from Smyrna. We went no further the first day; thence to Foorbalee, another small village; thence to Scala Nuova, through Ephesus, the ruins of which are imposing from their magnitude rather than their perfection. Thence to Suck Bizaar, or Magnesia, where we found two French gentlemen, a Mons. Texier and Mons. Clergis (or such a name), employed in excavating the friezes of a ruined temple which exists there. We found they had taken up their quarters in a ruined mosque, and were glad of their hospitable entertainment and shelter for the night. Thence to Tehaker, by another small village; thence to a strange little hut by the road-side, having passed the cities of Alinda and Alabauda (I think such are their names)—ruins of considerable extent, and of exquisite situation. Thence to Mylapa; thence to Boudroon, where we saw the sculptures that have created so much sensation in the literary world, about whether they belong to the tomb of Mausolus, or no. These I have made sketches of, and Sir Thomas Phillips has forwarded them to Sir Stratford Canning, in the hope of his obtaining them from the Sultan. They are the finest works in bas-relief in marble that I have seen, after the marbles of the Parthenon. The subject is 'The Combat of the Athenians with the Amazons,' and has all the energy and spirit of Greek Art in its highest perfection. I must, however, caution you that the marbles which I sketched—four in number—are some distance from the eye (above it), and, of course, owing to this circumstance, the difficulty of forming a correct opinion is much increased, as the delicacy (if there be any) is lost. From Boudroon we sailed to Djavato, where we saw an excavated tomb—or two, I think there were; and thence to some horrid little huts where we soundly slept, and enjoyed the change—at least, I speak for myself. The fire was kindled near the door

of the den, and the smoke escaped any way it could. Thence to Hoogiz, where is a large ruinous house, which belongs to one of the Dere Beys: this was so picturesque that I made a sketch of it. Thence to Dollomon, a pretty place, consisting of one house belonging to the Aga. Thence to Maeri, and so to Rhodes. Thence to Cyprus (after three or four days' sojourn); from Cyprus, where the boat merely touched, to Beyrout. Thence to Djebail; thence to Tripoli; thence to the convent of Anthony, seated in a wild ravine of the Lebanon range. Thence to a village whose name I forget; thence to a Baalbec, at which place we rested half a day, and examined the ruins, and where we, or I at least, enjoyed myself to the utmost; the pillars are glorious, certainly, although I believe they do not tally with the received proportions of Corinthian architecture. From Baalbec to Zebdeni, and thence to Damascus. I could write for a week on what I have seen in Syria alone, and should certainly tire you out did I relate every picturesque incident that occurred on the way. Beyrout you know well enough to prevent the necessity of my writing of it; but I may mention that Commodore Napier has written his name upon it in large hand—such a hand as one would expect him to write from his appearance. They say here that the Maronites and Druses are at loggerheads; and in the mountainous passes of the country we met some troops of cavalry looking as wild and savage as the rocks themselves. Seen in such positions as we saw them, they would make stones speak: winding in single file up the rock, nothing could present a more magnificent spectacle; and yet the pleasure I felt at seeing them was mingled with a degree of savageness, because I could not stamp them down at once upon my sketch-book. But space and time are narrowing, or I would gladly try to interest you in return for the repeated obligations you have conferred on me. I must speak, however, of the jolly monks of St. Anthony, who were delighted to see us, and came round us in our apartment, like curious children, to see us eat our dinner, or devour it rather. The effect, for it was lamp-light, was something never to be forgotten, and every corner concealed a face that was full of mirth and fun.

This letter is dated Fort Manuel, Malta, February 21th, 1843:—

"As you know, from experience, the dulness of quarantine, you will perhaps excuse my desire to escape a little of it by inflicting an epistle on you, and so lightening the tedium of these tedious twenty days. Half of our quarantine has expired; indeed, this is the twelfth day; for we count the day of our arrival here as one day of the imprisonment. We arrived here on the 12th, having left Alexandria six days previous, on board of her Majesty's steamer *Medea*, the lieutenant of which, Mr. Harvey, very kindly offered us the passage. I think that, despite the attentions of the officers, and tolerable weather for the trip, I never passed six more miserable days. I scarcely know—perhaps I should say that I am perfectly ignorant of—the cause of the nervous depression that I experienced; and it is the more surprising to me as I had no disposition to sea-sickness. Since we have been in quarantine, however, I have in a great measure recovered my wonted spirits, and hope, before we start for Naples, that I may be perfectly recovered. We were seven weeks upon the Nile expedition, and went up as high as Thebes, making no stoppage at any place except Keneh, from which place we visited the Temple of Dendera. We stopped for two or three hours to visit the site of the ancient Antinoë, and visited the tombs in the mountains Irouit, which occupied one day; but our journey was performed with all convenient rapidity, and we delayed at no place longer than was absolutely necessary to see the antiquities, or whatever else was worth seeing. Our boat, though smaller than such as we saw used by the English, was yet better than most of the others, and contained all the necessary accommodations, which I need not recapitulate to you. It was manned by a lusty crew of twelve rowers, besides whom there were the Prais, his son, a boy of twelve years or about that; the pilot, and two other men, one of whom I might describe as an improvisatore, whose business was to make and sing rhymes on the passing occurrences, the crew joining in a chorus at the end of each line, and prolonging the same a little

at the end of what might be called a verse. The airs selected by him were not by any means unpleasing, having a quivering tremulous character, and being uttered with a loud voice, which might be heard at a very considerable distance. With nightfall they (the crew were accustomed to fasten the boat to a large stake driven in the ground, and then assemble round a fire, and sing to the sound of a double pipe, which, in tone, resembles much the Irish bagpipes, and a funnel-shaped drum or tambour, which was beaten by the hand to a peculiarly monotonous air; perhaps one of the crew would stand up and perform a dance of the country, supporting himself by a stick, and his companions clapping their hands in concert; and thus the time passed well enough with them—the day employed in tracking or rowing; the evening, in dancing, singing, and other diversions. For us, we either read, or wrote, or drew, or watched the novel aspect of everything round about us.

I walked about the streets of Alexandria with my eyes and mouth wide open, swallowing, with insatiable appetite the everlasting succession of picturesque characters. I had the most unaccountable impulses, that would not let me stop to sketch, but were constantly prompting me on, to drink in, with greedy enjoyment, the stream of new sensations. The bazaars confused me by their wonderful character; and, if I stopped to sketch, I soon had a crowd round me, some of whom were very pointed in their remarks, and seemed to gaze at me as if I was some strange wild beast; they turned over the leaves of my book whilst I was sketching; and some of them told me, with a laugh, that I was El Madne Achmet, and jested with each other about me in a way that to me was and is perfectly incomprehensible. I was constantly asked if I was an Arab Turk, an Arab, and such like ridiculous questions. But the novelty of the scenes was ample compensation for all these little annoyances, and I enjoyed them so much, that I fear my very excitement would not allow me to do so much as otherwise I should have been able to do. The *cafés* were very interesting on account of the assemblage of characters outside their doors; the pipe seems to be the best friend of the Turks, and contentment was never better expressed than by one of those same people lounging in listless idleness, the only noise accompanying his thoughts being that of the smoke bubbling through the water; and perhaps it is no traduction to say that the smoke and bubble are apt and fit types to represent his thoughts. It must be so, or how else could their country be in such a degraded state. I declare that the Turkish empire, for by far the greatest part, seems to be one great ruin, and the people of the country living in a state but little removed from savage life. In Egypt I was astonished to see the abject condition of the Arab fellah; and the ruined villages and towns wherever we went, indicated the most rotten state in which man can live and call himself not a savage. The clamorous demands for bucksheeth, would lead one to suppose that the poor wretches were almost famished, and were begging for life rather than a gratuity. Previous to sailing up the Nile we visited the Pyramids, and had to make a long *détour* owing to the soft state of the soil, the inundation not being sufficiently subsided to allow of our proceeding in a more direct path. It occupied us about five or six hours by the route we took; and we had during its performance the opportunity of seeing the Pyramids in many points of view. As is usual, we were more struck by these objects at a distance than when we approached nearer to them; and, as is usual, when within about two miles of them, we were met by some half-naked Arabs, who came round us with the most extravagant gestures of delight, leaping and running as if mad, vehemently assuring us that we wanted two Arabs a piece, and repeating their names to us every two or three minutes (Hassan, Mahmoud, Mahmoud, Hassan), until they fairly exhausted our patience. We found an encampment of Europeans at the Sphynx, which had been excavated in front, in order that they might read the ablet (or copy, rather,) which is between its paws; they consisted of Dr. Lipsius, Ronomi, and Mr. Wild, an architect from London, and some artists employed in copying the hieroglyphics in the tombs. We visited such as could be entered, and in the evening we visited the Pyramid of Cheops. The scene we had outside the entrance baffles description. I know

not how many Arabs there were, but they made noise enough for 80; scuffling and quarrelling with each other, each bent on entering with us, and each bent on getting in before his neighbour. I at length found myself inside a square shaft of rapid descent, slippery enough, and dirty enough, with a candle in one hand and an Arab in the other, the stifled sounds of voices coming up from below me, with glimmering lights in front and behind. After one or two false steps we reached the bottom, where the stones had been blasted away; and here we ascended into the long gallery, and having reached the same, observed how fine the work was, and wondered what it was for. Then the Arabs lugged us up the sloping sides, and we soon reached the King's Chamber, having stopped to admire the immense labour taken to baffle the search that has proved too keen. The sarcophagus remains, but its kingly tenant and everything else have vanished; and in this mightiest of earthly human monuments to preserve the body from destruction, we read the lesson that it is of no use to try to do it. Human greediness is too much for human vanity, and despite the strongest efforts to render it otherwise, the passions—the base ones, I mean—are constantly asserting their superiority over the intellectual and noble ones. The Pyramids serve, too, for ingenious men to exhaust all their fanciful theories upon, and seem to be quite mistaken in their purport by a large body of learned philosophers, who, being unwilling to take the evidence before them, speculated on what might have been, and what a deal of room there is, in them they have not yet found a use for. A big mass of vanity is too much for their stomachs, and well it may be, for it must be an uncommon strong one to digest the Pyramids. We ascended them the next morning—Diol is the large one—and I reached the top first, and in nine minutes. No sooner landed there than my Arab assistants clamoured for bucksheeth, and used every entreaty to induce me to give them *tre piastri*. They pointed to their eyes, and then to the ascending party, shaking their heads as if they wished me to understand that they should not see. They stroked my arms down as you would fondle a spaniel, and at length knelt down and embraced my knees. This was too much for my gravity, so I gave them their desire and pacified them. No sooner, however, did the others arrive at the top than they gambled it away with their companions, and when we reached the bottom were loud in entreaties for more. We slept in a tomb one night, and in a tent the next; but such was no novelty to us, and our slumbers were sound. When fairly launched in our craft for Thebes we began a very regular life, and one that has afforded me a large amount of satisfaction and pleasure. To enumerate and describe the ruins would be only tiring you: it is sufficient to state that, as Sir Thomas thought we might see specimens of every style of Egyptian Art at Thebes, we went no higher. At Carnac I was more astonished than even at the Pyramids. The great hall, in my opinion, is more immediately comprehended in its grandeur than the others. The mind is at once impressed with the idea of immense size and eternal strength, whilst with the others it is necessary to consider and reflect upon before they are understood. I saw your name on one of the propylæa on both sides, and recognised the spots of three or four of your sketches. The sculpture on the wall afforded us a considerable amount of gratification, and Sir Thomas in particular was pleased with the representation of the battles on the outer and the northern side. He expresses himself, however, as more pleased with the Memnonium than any other temple or palace, and the tombs of Bâb el Malorek were the source of much pleasure. Belzoni's tomb elicited all our terms of approbation; and at the tomb of Anenphon I think we found the sculptured intaglio of rare delicacy of execution. With Medinet Habou we were pleased, and the figures on the plain; we also examined Gournore. On our return we stopped to visit the site of the ancient Abydos. It is almost buried in sand, and there is not much of interest to be seen; what may be underneath is another matter. It is near to Girgeh, a town where there is a Coptish convent, which we visited, and where we saw some funny specimens of the art of painting. In the neighbourhood of Kermeh the Pasha is damming out the inundation; and, when there, we saw persons of all classes working at the embankment, to

the sound of life and labor. We were informed that a murrain had swept away some thousands of cattle, and that the Pasha's loss was very great; but they expect that they will recover it in the amount of grain grown in the coming season, the inundation having risen to an extraordinary height. We were also told, when at Cairo, in returning, that the Pasha was in a bad temper; that he had only just been reconciled to his son Ibrahim, with whom he had been displeased on account of his want of success in Syria. Ibrahim has been ill, and is just recovering. The Pasha is building a mosque on the citadel, which is very elegant, and of a veined alabaster material, which contributes much to the richness of effect, although it is said proper advantage of this has not been taken. I regret that I did not see the Pasha, for certainly he is an object of interest, having made some stir in the Egyptian world—to what end, however, remains to be seen. It is said that he has strong fears lest Egypt should fall into the hands of the Franks; but does not anticipate it whilst Ibrahim lives. For my part, I should say the Egyptians don't care a straw about the matter; for I believe they can't be worse off in either physical or moral condition. There is much pleasure in store for us yet at Naples, Rome, Florence, Genoa, Lyons, Paris. I hope I shall reap all the advantages I ought to do from this journey; and I sometimes try to persuade myself I shall, and am doing so. I work all I can, and study all I can, and with as concentrated an attention as I am capable of.

#### THE WOOD-ENGRAVERS.

A meeting has been held, and a memorial agreed to and extensively signed, by the wood-engravers of London, with a view to induce the Council of the School of Design at Somerset House to suspend the recent "order" by which the art of wood-engraving is taught in the Female School. Mr. Thompson presided on the occasion. If we are rightly informed, the memorial has been presented, and a courteous reply has been given, declining to make the required change. That the wood-engravers should be anxious to put a stop to a procedure that threatens much injury to them is not to be wondered at, more especially now, when prices for good work are so wretchedly diminished as to render the occupation of a clever and skilful artist scarcely more profitable than that of a bricklayer. We must reason, however, on this subject. Unhappily in this country, just now, every profession and every trade is overdone; yet it does seem unreasonable that any class of persons should object to other persons being educated so as to share with them even the very little of labour that remains to be produced. It is notorious that scores of "lads" are employed to produce cheap cuts for the two illustrated papers; and it is certain that ere long the "supply" of hands will so far exceed the "demand" that it would seem likely for every woodcut to be executed there will be half a dozen applicants—these illustrated newspapers not being destined to have a very prolonged existence. Still the evil is one that cannot be remedied by the course which the wood-engravers suggest. And we must bear in mind that engraving on wood is one of the few employments that ladies may undertake without losing "caste." Unfortunately in this country their means of occupation are so few as to amount to "almost nothing" that is not menial. The governess is far worse paid than the cook; the daily teacher has to walk miles and work for hours daily for a sum of about two and sixpence; embroidery and worsted work are valued at about ten shillings a week to the producer; and the poor plain or fancy worker, if she labours at home, and so "keeps up her respectability," may earn ninepence per diem, to be doubled if she braves licentious starers twice a day, alone and unprotected in the public streets. Considering all things, therefore, we cannot but rejoice that the Council have not yielded to this requisition of the wood-engravers, but determine that ladies who desire to learn the art shall be taught it. It is, indeed, important that they be taught it properly, so that employment may follow; and it has been

a most unfortunate policy which induced the appointment of "a teacher," half amateur and half professional, who has a great deal to learn and very little to instruct.

#### THE PRIZE CARTOONS.

THE eleven "prize cartoons" have been exhibited during the month in the Gallery of the British Artists, Suffolk-street, where, according to some authorities, they have been seen to greater advantage than they were at Westminster Hall, "the light being much better, and the small number of designs not distracting the attention." Others, however, seem to think they suffer materially in being placed so close to the eye. Certain it is, that their merits as well as their defects are here more justly appreciated. The rooms in Suffolk-street have, in one way, at least, supplied a singular contrast to the old Hall; at Westminster there were crowds daily; in Suffolk-street a solitary stroller dropped in now and then; but it must be borne in mind, first, that at Westminster one hundred and forty cartoons were exhibited—in Suffolk-street only eleven were shown; in Westminster visitors were admitted free to see the whole collection—in Suffolk-street one shilling was exacted from each for the privilege of looking at less than a dozen. This was a very unaccountable arrangement, and could have been no other than a very "bad speculation;" but it is a speculation, with which the artists have, we understand, nothing to do, and belongs exclusively to the publisher of the series of cartoons—a printed order for a copy of which forms one-half of the cover of the catalogue. We are anxious that this should be clearly understood, because, although it may be perfectly justifiable in a publisher to render his plans as profitable as he can, it would not have been creditable to the eleven artists to have exhibited so mercenary a spirit as to have demanded one shilling each for that which the Nation had shown for nothing, having previously liberally rewarded the producers. A heavy charge has been often brought against us by our Continental neighbours, and not without some foundation—that we are as much traders in intellect as we are in merchandise; and we perceive in a recent number of a French journal a bitter sneer against our artists for this attempt, at Suffolk-street, to make a shilling show out of the "prizes."

The policy of charging a shilling for admission to view the eleven is quite another matter. It is, we humbly think, an unwise, if it be not an unjust, charge, and will sufficiently account for the loneliness of the rooms. It appears that the cartoons are to be lithographed by the sons of Mr. Linnel. The *Spectator* "argues favourably of the accuracy and spirit of these copies" from "a glimpse" the editor has had of the young gentlemen's work in progress. We are glad to hear this, for the task is one of no ordinary difficulty; and if to be done at all, it is most essential that it should be well done. For our own parts, we have little expectation that the work will succeed, and greatly question the wisdom of producing it at all; sure we are, that before it can be in the hands of the public each of the eleven artists will have painted a picture far worthier to be multiplied by engraving. The Messrs. Linnel may be, and we hope will be, fully competent to the due execution of the work; but we must enter our protest against so considering them upon no better evidence than that which seems to have contented one of their friends—their "copies of the pictures in the National Gallery, engraved in Felix Summerley's shilling catalogue"—mere memoranda of the paintings, usually about the size of half-a-crown.

We fear this publication will do no good to any one concerned in producing it; it would be an insult to the eleven artists to consider the cartoons as their best works; and, inasmuch as they are all of them comparatively young men, it would be absurd to imagine that their next efforts will not greatly surpass their (so to say) juvenile attempts.

The cartoons have reflected the highest credit on the talents of their producers; they have established the proof that the power to excel in the highest department of the Arts is assuredly with British artists; but we must enter our protest against considering this first attempt as an attempt by which we desire judgment to be formed concerning our ability as a Nation to answer a National

call. On the same principle that we should have deeply lamented to find the Royal Commissioners selecting the competitors to do the actual work of embellishing the Houses of Parliament *without further trial*, so do we regret that a work is to appear—and to go far in stamping our national character—formed of the earliest efforts of artists in a new style; when we know that in the course of a year or two these artists, or others, will of a surety produce works far more worthy of the age and country, and infinitely more honourable to themselves. Nay, we do not entertain a doubt that every one of the eleven will within the next three years be heartily ashamed to look at a copy of the work that bears the date of 1843. Let us, for example, anticipate the next drawing of Mr. Armitage—in 1844; can there be a doubt that time, study, and reward, will have had their natural influence; and that, in 1844, he will little thank the person who places palpably before him the work of 1843?

But the evil is not to end with the production of the eleven prize cartoons lithographed by the sons of Mr. Linnel; it is advertised that the ten cartoons that received "ADDITIONAL PREMIUMS" (such is the term applied to the works recompensed not out of the Treasury, but out of the receipts at the doors,) are also to be engraved and published, in some shape or other; and that a few of those that obtained no prize of any sort are to be mixed up with "the ten."

At all events, we hope our school may not receive final judgment from these copies—eleven or twenty-one, as the case may be; we venture to prophesy that they will confer small credit and no advantage upon the parties concerned in their production. At least, let us inform our Continental neighbours—our foreign rivals—that they have no right to draw conclusions as to the capabilities of our British school from these examples of a few young men—mere tyros, by comparison. We are bound to tell them that three out of four of these successful competitors were utterly unknown before the premiums were awarded—that the contest for prizes was carried on chiefly by students—that not a single artist of established fame entered the arena. If, therefore, the schools abroad will place our productions—the copies of THE ELEVEN, and the copies of THE TEN—beside those only of their own pupils, or third or fourth rate painters, we shall willingly abide the issue; but if they, unfairly and of malice aforethought, compare our English cartoons with the productions of their great masters—the leading spirits of Germany and France—they shall, at all events, be told of THEIR WRONG-DOING.

#### VARIETIES.

ARTIST-JUDGES.—We have reason to know that it was seriously considered and discussed by the members composing the "Royal Commission of Fine Arts" to permit the artist-exhibitors of the "Cartoons" to award the prizes offered—that is to say, to determine among themselves who were best entitled to the premiums. The Commissioners were not quite prepared to adopt this plan; its novelty startled them; and—although not without considerable hesitation—the proposal was withdrawn. We have very little doubt, however, that when next brought forward, under circumstances that justify its adoption, it will be adopted. It will be wise to do so, undoubtedly. Ancient authorities are in favour of such a procedure, and although unknown to modern times, when

"interest's gilded hand  
Can shove by justice,"  
or, at all events, when favouritism or prejudice acts instead of reason, there can be no question of its being the wisest course that could be pursued. Free from objection it certainly is not; but it seems to us by far the most likely to secure reward to real worth.

THE LATE EXHIBITION.—No account was kept of the numbers admitted free to the exhibition in Westminster Hall. This is to be regretted. The numbers, as stated to us, would seem a huge exaggeration to those who were not witnesses of the mighty pressure within the old Hall from ten o'clock until six. On Saturdays, also, when each visitor paid a shilling, the influx

of visitors was great. On the last Saturday 3052 were admitted—a triumphant finale. It is to the honour of the multitude, that while crowds after crowds pushed into the Hall, and squeezed into places to look at cartoons, not the slightest ill or unbecoming conduct was manifested. The people seemed to be—as they really were—learning a great and useful lesson that from the memory will never fade. It is but “the beginning of the end;” the cartoon exhibition was in many respects an experiment. By-and-by an English “mob” may be admitted anywhere without danger of mischief; such trials of their temper and sense of propriety will not be made in vain.

THE ROYAL EXCHANGE is now so far getting into shape, both within as well as without, that the architecture of the cortile or quadrangle is fully developed along its sides, although the surrounding arcades or ambulatories are still quite in the rough. There will also be some further enrichment bestowed on the elevations of the quadrangle, which even now are of far more embellished character than usual. In this portion of the structure the original plan has certainly been very much improved upon, for, instead of columns only, below, there are now piers behind, and arches between them, whereby, if the ambulatories are more enclosed from the central area—an advantage, rather than the contrary, in wet weather—a due degree of solidity is there produced; whereas, had that lower order been executed according to the first idea, the contrast between the upper and lower half of the elevations would have been too great, and would have amounted to the expression of heaviness above, and vacancy and weakness below. The design of the upper order (Ionic) has also been greatly amended, and is now not only particularly rich and picturesque in its general composition, but presents several new and well-studied features of detail, in the windows more especially. In one particular, however, there is a change which we do not consider to be at all for the better, viz.—the open-work parapet which has been substituted for a balustrade. As regards the exterior, or rather the west front, a very material alteration indeed, for the better, has been effected by bringing the portico more forward, so as to render it *diprostyle*, or with two intercolumns on its flanks: this, and the addition of columns within, together with the very great depth of the central division of the portico, and the avenue in continuation of it leading into the quadrangle, will render it by far the finest example of the kind—the richest and most scenic and picturesque in the metropolis—perhaps in the kingdom, especially when the unusual scale of the order itself is taken into consideration. Frequent as porticoes have become of late years, they have all been pretty nearly quite alike, consisting of no more than an advanced line of columns, and by far too shallow to afford a due degree of shelter, or the appearance of it, or to produce any bold effect as to shadow. Most certainly there has not among them all been any instances of *polystylar* composition in respect to internal columnation, which is productive of so much variety and play of perspective, as well as of light and shade. The portico of the Exchange will, when completed, also be particularly rich, on account of its pediment being filled with sculpture. As to the intrinsic merit of the last, we do not speak, but merely as to the general architectural finish derived from it.

RICHARD DADD.—Considerable doubt seems to exist as to the actual position of this unhappy young man. It is assumed that, because no official intelligence of his capture has reached either the Home or Foreign Office, there is no truth in the rumour of his being in custody. The facts, however, are briefly these. He was taken (as described in the French newspapers) for attempting to kill a fellow passenger in the diligence at Montrean, not far from Fontainebleau, and on the direct line of road from Paris to Lyons and Marseilles. At Fontainebleau he is

now imprisoned. When arrested he unhesitatingly avowed that he had taken the life of an individual who called himself his father; and his conduct since has been such as to induce entire conviction of his insanity. Under such circumstances, according to the laws of France, no trial is necessary; the poor maniac is at once consigned to a lunatic asylum. Being an Englishman, however, he would of course be given up to the proper authorities, in the event of a legal application being made. We understand the afflicted family have memorialized the Home Secretary for permission to allow him to remain in France, where he will be properly taken care of (of course at their expense, their means being ample), thus avoiding a trial in this country, which can terminate only in his confinement for life—but the progress of which must again harrow up the feelings of those who have been heavily and grievously tried. His family appear to consider that this boon will be granted; if it be refused it will not be from want of sympathy with their terrible sufferings, but only lest a dangerous precedent might be established.

NEW CONSERVATIVE CLUB-HOUSE.—This building is now beginning to show itself on the west side of St. James's-street; but whether it will turn up a *King of Clubs*, architecturally, it would as yet be hazardous to say. Its frontage cannot be much, if at all, less than that of the Reform Club-house, and in depth it appears to be of somewhat greater extent; yet, owing to its situation, it will have only one facade; consequently, as all external embellishment will be confined to that, a greater degree of it can be afforded. Yet, judging from what is to be seen at present, we are not particularly sanguine in our expectations of what is to come. The character of the architecture is rather poor than otherwise—too much akin to that of the Pall-mall Conservative: what is to come may probably be very much better, but it may be questioned if the whole will, in that case, be sufficiently of a piece. With the double example and warning before their eyes, of the Reform and the first Conservative, rendered all the more marked by their juxtaposition, it was to be thought that the architect and his employers would have spared no pains to make their own building excel the merits of the one, and be altogether free from the defects of the other. Not having seen the design, and therefore being unable to form an idea of what the entire composition will be, we give our present opinion as one only *pro tem.*, and hope we shall, by-and-by, have reason not only greatly to alter, but to change it altogether. Still, such a commencement has rather damped the expectations we had formed.

STATUTES TO GREAT MEN.—The following important letter has been addressed by the Premier to C. L. Eastlake, Esq., Secretary to the Royal Commission:—

Whitehall, August 17, 1843.

DEAR SIR,—A proposal was recently made in the House of Commons, that the commissioners should be empowered by her Majesty to inquire into the best means of doing honour, by public monuments in sculpture or painting, to be erected at the public charge, to the memory of men entitled to the gratitude of their country by eminent civil, literary, or scientific services. I was unwilling to devolve on the commissioners a general inquiry of this nature, not immediately connected with the original object for which the commission was appointed, but I willingly undertook to recommend to her Majesty to give to the commissioners full authority to consider whether there is any portion of the edifice intended for the accommodation of the Houses of Parliament or of the buildings connected with that edifice, which could, with advantage and propriety be allotted to the reception of monuments, such as those to which I have before adverted, and to report their opinion to her Majesty, not only with regard to the particular site of such monuments, but in the event of an appropriate site in connection with the new Houses of Parliament being recommended by the commissioners with regard to the principles, generally, which should govern the selection of the names to be honoured by so distinguished a record of national gratitude, and to the best mode of combining the public acknowledgment of eminent service with encouragement to the Arts in this country. I am empowered by her Majesty to recommend he subject to the considera-

tion of the commissioners, and to give them her Majesty's full authority for entering upon it.

I am, &c., (Signed)

C. L. Eastlake, Esq.,

ROBERT PEEL.

It would be difficult for even the Prime Minister—liberal and enlightened as he is—to make a communication that will more gratify artists and men of letters. Hitherto nearly all the honours that have been accorded by the nation have been bestowed upon its fighting men. Nevertheless, is it not true that

“Peace hath her victories as well as war!”—

victories, out of which have arisen more real benefit, and which have conferred more genuine glory on Great Britain than Trafalgar and Waterloo put together? We look forward with exceeding delight to the result of this most welcome announcement.

IMPROVEMENT OF ST. PAUL'S CHURCH-YARD.—It is now fully determined—so goes the *on dit*—that the whole of the houses forming the north side of St. Paul's Churchyard and the south side of Paternoster-row shall be entirely cleared away. What, however, seems to contradict such intention is the fact that a very extensive building for the Religious Tract Society is now actually in progress on that side of the Row which is to be taken down. In itself, too, the improvement would be by no means in proportion to the very great sacrifice of property attending it; nor, except in regard to obtaining space, could much be made of it, unless the scheme were to embrace a very great deal more. At all events, it would be found indispensable to rebuild, at least, to refront the whole of the north side of Paternoster-row, if it is to be so exposed to view. It is true, the north side of the Churchyard stands greatly in need of improvement, it being now strangely irregular and jagged in plan, with the houses jutting out at sharp angles in some parts, and with gaps and rents in others; yet this might be corrected less extravagantly than by sweeping away that mass of buildings altogether; as it might be rebuilt—even could it in some places be only a single house in depth—so as to form a uniform and handsome range of building, carried parallel to the cathedral, upon a line set somewhat more backward from it than what is now the widest part. Were this done, the cathedral itself would, in our opinion, show itself to greater advantage, and as a more imposing mass, than it would do, should the area on that side be so greatly enlarged as is now proposed.

HAMPTON COURT.—Crowds visit Hampton Court for the purpose chiefly of inspecting the pictures. We understand that the number of persons admitted daily during the past month has averaged 6000—i. e., within the month upwards of 180,000 have been admitted.

ART-UNION OF LONDON.—The exhibition of works of Art selected by the prize-holders of 1843, closed on the 9th of September, having been open four weeks: namely, three weeks to the members and their friends by tickets, and one week to the public by advertisement. It was also open eight evenings. During this period the Gallery was visited by no less than one hundred and seventy thousand persons; and it is gratifying to record that not the slightest damage was done to any of the pictures. On one day alone, namely, Friday, the 1st of September, above 25,000 persons passed through the rooms. To show the amount of excitement it caused out of doors, we may mention that no fewer than five pirated versions of the catalogue were published by speculators, and sold in the streets by men, women, and boys; the price of some of which during the last week was as low as one halfpenny each. It is somewhat curious, that during the week when the exhibition was open to the public generally, the rooms were at no time so crowded as they were when visitors were admitted by tickets only. The subscription for 1844 will doubtless be very large (as every subscriber will receive, in addition to an engraving by Goodall, from Stanfield's “Castello d'Ischia,”

a series of outlines by Selous, illustrative of the "Pilgrim's Progress," engraved by Moses; and we call earnestly on Artists to sit down resolutely and do THEIR BEST.

**THE NATIONAL GALLERY.**—The gallery is closed until the 30th of October, i. e., for about six weeks. This is an evil utterly unjustifiable. If the officers connected with the establishment require relaxation—their duties being so terribly onerous and fatiguing—they can do as they do elsewhere, relieving each other by turns. But really it is unpardonable that the public should be made to sustain a serious injury, because the persons they pay liberally expect to take holidays. We hope Mr. Wyse will next year call the attention of Parliament to this grievance.

**PRIZE AT LIVERPOOL.**—We rejoice to record the fact that the prize of £50 has been awarded by the Liverpool Academy to Mr. P. F. Poole's picture of the 'Plague of London.' This is honourable to a provincial institution for the promotion of the Fine Arts. In France, the Nation would have come forward long ere this to reward the painter who produced such a work; in some of the states of Germany he would have been honoured with a public triumph; in England, however, he is left to look daily in his own chamber upon the picture he has painted, until possibly, in due course of time, having long lived with poverty, he dies in want, and Nations will compete for the possession of the work he could scarcely exchange for its weight in mutton. We by no means anticipate such a destiny for Mr. Poole; he has marketable talent as well as high genius, and can manage to live without being often hungry; but such a destiny is common enough in the annals of Art. It will be asked in after times, was it possible that such a picture as this 'Plague of London' could have been seen by tens of thousands without finding a purchaser? Why, a jew-broker—prudent enough or rich enough to retain it for a dozen years—might find it a profitable investment; for, sure we are, it will be one day worth a King's ransom.

#### ART IN CONTINENTAL STATES.

**FRANCE.—PARIS.**—Were it not sufficiently known, that on the Continent the favourite play of our great dramatist was *Hamlet*, this would be shown by the frequency of its illustration, and the numerous subjects it supplies to foreign artists. M. Eugene Delacroix has just published thirteen lithographic plates illustrative of striking scenes in this play.

**The Madeleine.**—The group in white marble, intended for the high altar of the Madeleine, is finished, and about to be placed in its intended site. The French journals, in criticising this work, pronounce it "the largest in Paris;" it is by Marochetti.

**The late Duke of Orleans.**—The Queen, before departing for Eu, inspected, in the atelier of M. Marochetti, an equestrian statue of the late Duke of Orleans, intended for erection at Algiers.

**Competitions.**—The following subjects have been proposed, by the School of Fine Arts, as themes of competition for the prizes in Painting, Sculpture, Architecture, and Engraving:—"The Exile of Oedipus from Thebes;" "The Death of Epaminondas;" a Palace of the Institute, fitted for the reception of the five great Academies; and for engraving, "Arion precipitated into the Sea."

**The Standish Collection.**—The bequest of this collection to the King of France will be fresh in the recollection of all lovers of Art. If the circumstances to which are attributed the spirit in which this bequest was made, be correct, it is a matter of surprise that that there could coexist in one mind the elements of a love of Art, and the morbid egotism that could counsel such a disposal of such effects, which alone will be remembered according to their value, while the testator will be forgotten. This museum, which formerly occupied the second story of the north wing of the Louvre, is now arranged on the first floor in the apartments occupied by the Naval Museum: the suite consists of 16 small rooms. Pictures occupy the four first; the fifth contains

sketches by the great masters; the sixth, the library; and in the remainder are disposed, sketches, engravings, antiquities, &c. &c.

It is expected that the collection of antiquities in the Royal Library will be enriched by the addition of a gold girdle, discovered near Beauvais, in the cuttings for the railroad in progress in that district. It is supposed to be a Gaulish relic, dating back nineteen centuries. It is valued by weight alone, at 880 francs.

**Vauban.**—The Minister of the Interior has commissioned the sculptor Etex to execute a marble monument in memory of the Marshal Vauban. It will consist of many figures, and occupy a site in the Invalides opposite to that of Turenne.

**ITALY.—FLORENCE.**—The Chevalier Cæsar Mussini, professor of historical painting in the Florentine Academy, has just completed two compositions. The method of painting is of recent discovery, and is said to excel all oil-painting in brilliancy and durability, as also in its perfect resistance to every degree of heat and cold. It can be washed without injury to the colours. Encaustic painting, also, is inferior to this new process in richness and durability, and in comparison with it the perishable fresco is dull and tame. The discoverer, Professor Mussini, makes a secret of his peculiar process, which seems to consist particularly in the method of mixing and applying the colours: it is, however, equally available on canvas as in mural painting. Lord Holland, the English minister at the court of Tuscany, has repeatedly visited the studio of the artist, and, after close investigation, became so interested in the discovery as to communicate it immediately to the Royal Commission of the Fine Arts. A negotiation has been opened with him for the purchase of his secret, but nothing is known of the result. Letters from Florence speak favourably of this discovery.

**NAPLES.—THE EXHIBITION.**—Notwithstanding the liberal patronage of the King of the Two Sicilies, the school of Naples does not flourish. The exhibition of this year does not reach its average standard, in consequence of many of its most talented supporters not having contributed. The most striking picture as regards size, is 'The Justification of Susanna,' by Ruò; it is, however, defective in many points. 'The Samaritan,' by the same artist, is better. Thomasso de Vivo exhibits two subjects from the tragedy of "Holofernes," one of which resembles very much the well-known picture of Horace Vernet. 'The Farewell of the Parganots to their Country,' by Catalano, is full of merit—many of its parts considered separately, are near in their approach to perfection. Of 'Socrates in Prison,' another picture by the same artist, we cannot speak in equally high terms. 'The Calabrian Sailor,' by Rocco, resembles too much an academical study.

There are many subjects selected with judgment which have not received justice at the hands of the artists: for instance, 'Raffaello presented to Pope Julius II.,' by Lessa, presents no one commendable feature.

There are comparatively few sacred subjects, and a large proportion of landscape, marine, and genre. Some of the portraits are very well painted, as are some of the miniatures; and by Vianelli there are two very remarkable sepia drawings; and by Panebianco two admirable drawings in Indian ink, one of which is 'The Entrance of Ferdinand II. into Messina.'

The sculpture and architecture are generally superior in character to the other departments; but the impression with which the spectator quits this exhibition is, that the revival of Art in, at least, Naples is not yet to be looked for.

**VENICE.**—A large picture has been completed by Grigoletti, the subject of which is the 'Banishment of Foscari from Venice.' The picture has been sent to Venice.

**ROME.**—Several large sculptures have lately been sent hence to Munich. Besides the works of Professor Martin Wagner, there was the model of the colossal statue of the King of the Two Sicilies, and the statue of Bolivar, both modelled by Tenerani, and which are now to be cast in bronze by Stiglmeier, in Munich.

**GERMANY.—BERLIN.**—Cornelius has been commissioned to make drawings for *tableaux vivants*, intended for the fêtes about to be held at court. The subjects are from Tasso's "Jerusalem Delivered."

**Copernicus.**—It is proposed to erect at Thorn a monument to Copernicus, by subscription. A member of the Academy of Arts, of Berlin, supplies the model of the statue, which represents Copernicus holding in one hand an astrolabe, and with the other pointing to the heavens. It seems that foreign states have been solicited to subscribe to the work, but the University of Glasgow is the only foreign body that has contributed; and the smallness of this gift is complained of. It is well that a statue should be raised to the memory of so great a man; and it is well if Prussia, employing her own artists, could not afford to commemorate her own great men, that foreign states should contribute to do honour to the memory of such a character; but before the expression of disappointment on this score, it should be remembered that it is an unusual proceeding to subscribe to foreign monuments.

**Sale of Pictures.**—The gallery of Herr Reimer, the bookseller, has been sold by public auction. The works were principally by masters of the Dutch and Flemish schools. The prices are said to have been exorbitant; but, if this be the case, having some of them before us, we are disposed to augur somewhat unfavourably of the merits of the works; however, purchasers attended from distant capitals, to which is attributed the extravagance of the prices. The most remarkable picture was a Rembrandt, which realized 4517 francs.

**VIENNA.**—The jealousy existing between the various so-called schools of Germany, is much in its spirit the same that pervaded those of Italy, in the zenith of their greatness. An example of this has occurred in the recent exhibition at Vienna, where nearly the whole of the pictures were by Austrian artists—indeed now, for a series of years, Vienna seems to have stood thus alone. The collection of this year was varied only by a very few pictures from Munich, one French, one Danish, a very few Belgian and Flemish; from Dusseldorf and Berlin, none.

**MUNICH.**—Professor Hess, assisted by his pupils, is still occupied in the embellishment of the Church of St. Boniface. In the upper part of the edifice, are already executed 36 frescoes, all relative to the life and sufferings of the martyr saint and his predecessors in Germany. Nothing remains to be done but the backgrounds, which are to be of the colour of gold. Schraudolph, the worthy coadjutor of Hess, has painted on the walls of the nave, 'Boniface Preaching the Gospel,' and 'The Consecration of Boniface.' During this year, three frescoes will be executed, for which the designs are already made: these are 'The Foundation of the Four Bishoprics, by Boniface,' 'the Coronation of Pepin,' and 'Boniface setting forth to Preach the Gospel.' Koch, Schraudolph, and Hess are commissioned for these large compositions. The grounds on which these works are executed are, for some, purified lime; for others, a stucco of chalk or marble dust, which communicate to the pictures the appearance of enamel.

**A Portrait from Recollection.**—Kaulbach has just executed a portrait of King Louis, who is represented as Grand Master of the Order of St. Hubert, attended by four pages. It is due to the talent of this artist to state, that the head and entire figure was drawn upon the canvas from memory, and with all the fidelity of an excellent portrait of a patient sitter.

**FRANKFORT.**—The additions recently made to the collection of works of living artists are a large landscape by Carl of Munich, some designs by Van Haanen of Amsterdam, and a picture by Laddey of Riga.

**BOON.**—A competition has taken place here for a statue to be erected to the memory of Beethoven; and judgment has been pronounced in favour of a young sculptor of the name of Hahnel. After the completion of the design in clay, the statue will be cast in bronze at Nürnberg. The same

**DENMARK.—COPENHAGEN.**—Thorwaldsen has been instructed by the King to design three pediments for the palace, and one for the Hall of Justice; statues will also be executed for the palace, four of which at least, Hercules, Minerva, Nemesis, and Æsculapius, will be in bronze.

## REVIEWS.

**BARONIAL HALLS, PICTURESQUE EDIFICES, and ANCIENT CHURCHES OF ENGLAND.**  
 Drawn on Lithotint by J. D. HARDING.  
 Edited by S. C. HALL, F.S.A. Part I.  
 Publishers, CHAPMAN and HALL.

We review this work chiefly because it is our duty to direct attention to the peculiar style of Art in which it is illustrated. On this subject, the editor thus prefaces the publication:—

"It may be necessary to state that the prints which illustrate this work are executed in LITHOTINT, and not in LITHOGRAPHY—that is to say, they are drawn on the stone with the brush, and not with the pencil, crayon, or stump.

"Every practiser of the art of Lithography has devoted much time and study to obtain impressions from drawings so made; but experiments were invariably followed by disheartening failures; and the purpose was generally abandoned as unattainable, until, in 1840, Mr. Hullmandel made the happy discovery which may be said to form an epoch in the history of Art. It is by his patent process this publication is produced.

"But although the invention has been pronounced entirely successful by the highest authorities throughout Europe, and has been subjected to tests which afford indubitable proof of its having accomplished all that was sought for, or even hoped for, in the Art—an opportunity is here, for the first time, supplied, by which it may be fully submitted to public criticism,

"Its value cannot fail to be perceived and recognised; its merit will be at once apparent to ordinary observation and matured judgment. Its superiority over Lithography must be universally admitted; it is not only far more refined and beautiful in character, but it enables the artist to avoid the semblance of a copy, and to multiply his works, in no respect altered from their original features. The Lithotint Print is, indeed, a transcript of an artist's drawing, made by his own hand."

For our own parts, we have been utterly astonished to find this improvement in the art so manifest, and yet to know that it has never, heretofore, been submitted to any proper experiment; it has been suffered, indeed, to lie dormant for so long a time, that we imagine many persons considered it to have been abandoned as hopeless.

We shall take some early opportunity of giving its history, congratulating Mr. Hullmandel on at length receiving something like a reward for his labour, ingenuity, and ability.

The work which these lithotint prints illustrate, pictures the old baronial mansions,—

"The stately houses of England,  
 How beautiful they stand!  
 Amidst their tall ancestral trees  
 O'er all the pleasant land!"—

pictures, also, the venerable churches so abundantly scattered over this "pleasant land," and such "edifices" as may be picturesque in character, and rich in historic or traditional lore.

The baronial halls, the mansions, and manor-houses of Old England, rich treasures of the picturesque, in association with "patrician trees," the growth of centuries, and the various natural graces accumulated in "the demesne," supply most desirable subjects for the pencil, exceeding, indeed, all others in interest, and very often in pictorial beauty, and affording rare opportunities for combining the skill of the painter with historical records and descriptions of an important and valuable character;—the history of each of these baronial halls forming, usually, a prominent part of the history of the kingdom during its most eventful epochs, and illustrating the lives of our most famous "British Worthies."

With the houses emphatically styled "Old Houses" are almost invariably associated churches, pictorial in character, of venerable antiquity, and deeply interesting as connected with the several families whose ancestors they entomb;—structures, every stone of which discourses of the past, every aisle of which contains some relic to remind us of

"hands that penned  
 And tongues that uttered wisdom;"  
 record the glories of forgotten soldiers, or preserve memorials of warriors whose names "in Fame's eternal volume shine for aye." The village churches of England may, indeed, be classed among the most unchanged, as well as most peculiar of its existing structures; yet they are little known beyond the localities in which, ages ago, they were built, although treasure-houses of the antiquarian, abounding in suggestions to the historian, and of rare value to the artist:—

"We never tread upon them, but we set  
 Our foot upon some reverend history!"

This work is designed to supply pictorial illustrations of these baronial halls—their picturesque accessories, and the venerable edifices associated with them; the illustrations being accompanied by such memoirs, biographical, historical, and descriptive, as may be considered necessary introductions to these "nurseries of nobility," consecrate to memories of

"Altar, sword, and pen—  
 Fireside—the heroic wealth of hall and bower!"

The first part contains views of Cobham Hall (the north wing of the fine old structure); the interior of Cobham Church; and the turreted gateway to West Stow Hall, in Suffolk, an ancient residence of Charles Brandon, Duke of Suffolk, and his royal wife, the sister of the eighth Henry. The letter-press is somewhat largely illustrated with woodcuts, the drawings of Mr. F. W. Fairholt. Of them we shall transfer two or three examples into our columns. First, we select one of the famous brasses of Cobham Church, the most perfect and the most numerous assemblage now existing in the kingdom. "The series consists of

thirteen, recording the memory of the Cobhams and Brokes, 'lords and barons of this town of Cobham, with many of their kindred, who for many descents did flourish in honourable reputation.' Of the thirteen, eight are in honour of the knights, and five are memorials of the dames." We may next copy a portion of the "old" College

of Cobham—"a gateway surmounted by the arms of the Cobhams, luxuriantly overgrown with ivy, forming a fine example of picturesque antiquity." This college was founded about the year 1362 by John de Cobham, thence called "the founder."

The college was rebuilt towards the end of the reign of Elizabeth. It is now only a collection of almshouses; its occupants being twenty aged men and women, who have each a little mansion with a neat garden, and an allowance monthly.

We borrow a third cut—the old family state carriage, the date of which is probably not more remote than the reign of Charles II. It is in a good state of preservation, and stands in one of the out-houses.

The reader will, perhaps, permit us to give, in addition to these examples of woodcuts, the editor's introductory remarks to this part of the work:—

"The county of Kent holds foremost rank among the shires of England; not alone because of its picturesque beauty, its great fertility, the full and important part it occupies in British history, the abundance and richness of its antiquities, the peculiarities of its laws, the primitive character of its customs, or its ecclesiastical pre-eminence; but, chiefly, because it is regarded as our great island bulwark—our 'vanguard of liberty.'—

'A soil that doth advance  
 A haughty brow against the coast of France.'  
 Very few of our counties contain so many perfect examples of structures such as it is our purpose to de

dict. The baronial halls of Kent, and the ancient churches of Kent, are among the most remarkable, picturesque, and unimpaired edifices of the kingdom. With Kent, therefore, we commence our work; and although it will be, necessarily, discursive, we may draw from the vast store of wealth with which the fair county supplies us, ample to excite and interest the reader at the outset of our undertaking. Its proximity to the metropolis—from which, if we measure distances by time, it is separated by little more than two hours—supplies a sufficient motive for the selection of Cobham Hall, and the several striking objects in its immediate vicinity. It is situated about four miles south-east of Gravesend, nearly midway between that town and Rochester, but a mile or so out of the direct road. The narrow coach-paths which lead to it are shaded by pleasant hedge-rows, and run between lines of hop-gardens—our English vineyards—infinitely more graceful and beautiful accessories to the landscape than the stunted grape-shrubbages of France.

"The mansion stands in the midst of scenery of surpassing loveliness; alternating hill and valley, rich in 'patrician trees' and 'plebeian underwood'; dotted with pretty cottages, and interspersed with primitive villages; while here and there are scattered 'old houses' of red brick, with their carved wooden gables and tall twisted chimneys; and glimpses are caught, occasionally, of the all-glorious Thames.

"A visit to Cobham Hall, therefore, furnishes a most refreshing and invigorating luxury to dwellers in the metropolis; and the liberality of its noble owner adds to the rich banquet of nature as rare a treat as can be supplied by Art; the hall—independent of the interest it derives from its quaint architecture—is fine, although not unadorned, remains of the Tudor style, contains a gallery of pictures, by the best masters of the most famous schools, large in numbers and of rare value."

The history of the family—or rather families, for Cobham Hall has not descended from sire to son through many generations—follows; then a history and description of the building; and then some details of interest connected with the locality in which it is situated. The account of Cobham Hall is thus concluded:—

"Although in the course of our work we shall picture many nobler and more perfect examples of the domestic architecture of 'Old England' than is supplied by Cobham Hall, we shall be enabled to call attention to few that afford so rich a recompense at so small a cost—taking into account its genuine remains of antiquity, the magnificent works of Art that decorate its walls, its easy access from the metropolis, and the primitive character and surpassing beauty of the locality in which it is situated."

**UNA ENTERING THE COTTAGE.** Painted by HILTON, R.A. Engraved by W. H. WATT. (The annual print of the Art-Union of London.)

This print is at all events of a high class—the work of the great historical painter of our time worthily engraved. It is at least a large advance upon the last; the next will be still better; and the next better still. This is as it should be. Unfortunately for its universal popularity, the story is not here immediately told; the meaning is not at once obvious. A beautiful girl restrains the wrath of a lion, as she enters a cottage in which are an old blind woman and a young damsel. This is all that is apparent at once; and we fear immortal Spenser has of readers too few to comprehend the intention of the artist. The subject is taken from the first book of the third canto of the "Faery Queene." Una is seeking her knight, who has been "subtly betrayed" to abandon her; alighting from her "unhastie" palfrey, she laid her dainty limbs on the grasse, to take rest; a rampping lyon rushed forth suddenly to devour the royall virgin—

"Her angel face,  
As the great eye of heaven, shined bright,  
And made a sunshyne in a shady place."

The lion, therefore, "his princely puissance did abate," becomes the guardian of her life and honour, her companion, friend, "and faithful mate"—

"Still when she slept he kept both watch and ward;  
And when she wak'd he waited diligent."

So guided and protected, she reaches the cottage; the girl, terrified at the sight not only of the lion but of the lady,

"For never in that land,  
Face of fayre ladye she before did view,"

has closed the door, which Una's "unruly page"

\* The editor expresses a hope that he may receive information from sources in the provinces, by which he may be enabled to introduce into the work structures of great interest and beauty at present little, if at all, known. Many of our readers, when they become acquainted with the character and object of the publication, will be enabled to give him very valuable suggestions.

forthwith opens with his "rude clawes," and the lady enters. She finds here

"Abessa, daughter of Corceca slow,"  
and her old blind mother, both "fearefull women"  
and bad; the younger sinning still, the older living  
in wickedness and penance, saying upon her beads

"Nine hundred Pater-nosters every day,  
And thrice nine hundred aves."

This point in the life of fair Una was selected by the painter for the subject of his picture. It has been engraved with much ability by Mr. Watt, and may be accepted as an acquisition of value by those who can appreciate what is excellent in Art.

**CHILDREN WITH RABBITS.** Painted by EDWIN LANDSEER, R.A. Engraved by THOMAS LANDSEER. Published by GRAVES and WARMSLEY.

The children, a boy and a girl, are Allen Alexander and Mary Selina, son and daughter of the late Hon. Seymour Bathurst. The boy stands holding a living rabbit, which is carefully packed in a cloth, while his sister stoops, closely hugging to her bosom another well-conditioned rabbit, which seems content to be caressed, as if long accustomed to it. The little maiden's hands are almost buried in the luxuriant fur of the animal, which is expressed with such extreme tenderness of management that it would seem to yield to a breath. It is interesting to follow the keen observation of this distinguished painter, who endows the simplest incident with the language of eloquent description. The pressure, for instance, of the hands on the animal, is described by the partial closing of the eyelids. Besides these two, a number of young rabbits are also seen whimsically arranged in a brown dish. The head of the boy is characterized by infinite sweetness—the head of the girl betokens an understanding in advance of her years. The accessories of the composition are appropriate, and the engraving, which is in mezzotint, is skilfully executed, and most skilfully arranged, in the alternation of softness and decision of touch.

**FACADEN NEU-AUFGEFÜHRTER GEBÄUDE IN WIEN. ERSTE LIEFERUNG.**

Notwithstanding that so very much has been done in architecture of late years, nearly all over the Continent, it is exceedingly difficult to collect authentic information relative to the principal edifices and monuments of recent date in such capitals as St. Petersburg, Berlin, Dresden, Munich, &c.; or to obtain respective series of illustrations of them. Of Berlin and Munich, indeed, several of the principal modern structures are fully exhibited and described in the two architectural publications by Schinkel and Klenze, but then they are only those which were designed by themselves; consequently we cannot learn from them what others have done, or what is the prevalent character and taste manifested at the present day in the architecture generally of those and other cities. Neither are such works as the two just referred to at all calculated for the general public, since they are both exceedingly expensive as to cost, and exceedingly inconvenient as to size: which last is such as to render them fit only to lie upon a table in an architect's office, ready to be opened whenever there may be occasion to consult them. Yet between publications of this class or none at all there is scarcely any alternative, nothing even decent in execution, or at all trustworthy, upon a moderate scale, or superior to ordinary guide-book illustrations, which may be pronounced, nearly one and all, truly detestable, some of them to a degree almost inconceivable. Even in this age of publishing speculations, no one has thought of providing the visitors to such a place as Munich with an Architectural Manual or Companion, expressly devoted to the description and illustration of those edifices which claim attention as works of Art, and not merely because they happen to be public buildings, and, as such, entitled to mention in the ordinary guide book.

It would not be at all amiss to have, in addition to the last, an Architectural Guide Book, also, for every capital that contains many objects of architectural study. Such a vade-mecum would at once clearly inform the stranger to what points he ought to direct his attention, in regard to buildings. Certain we are that a companion of the kind is now needed even by professional men; for we have met with those who, after visiting the Conti-

nent, could give very little if any further account of the architectural novelties they had or might have seen there, than they might have picked up here at home; nay, sometimes not quite so much. Of this we had a very convincing but provoking confirmation, only the other day, when, being in company with an architect who was just returned from a visit to Paris of several weeks, where he had been, not on business, but solely for the purpose of seeing what had been done there of late in his own profession, we found, to our utter disappointment, that, so far from being able to communicate any fresh intelligence, he was actually not aware of the existence of several important works, relative to which we had questioned him. Even those which he had seen had quite escaped his memory: at least, he could give no intelligible account of any of them, or make any remarks worth listening to.

Perhaps the remarks in which we ourselves are now indulging will be considered of the same quality—at any rate, to have very little connexion with the work whose title we have prefixed above. They have, however, been suggested by it, for the publication furnishes illustrations of the recent architecture of Vienna, in outline elevations, and is moderate in price, and sufficiently convenient in size; so far, therefore, it might serve as a model for similar illustrations of other cities; yet, though the idea is good in itself, it might be very greatly improved upon. There is no other information of any kind than what is afforded by the plates themselves—not even a single page of letterpress, nor any sort of advertisement on the wrapper, to apprise us whether we may expect such accompaniment in a future *Lieferung*. As to the plates, when we say that they are *neatly* engraved, we have bestowed upon them all the praise they are entitled to; since the extreme insipidity of their execution is quite equal to its neatness. Still that is a deficiency that might be put up with, because it does not affect the designs themselves, otherwise than as not showing them so advantageously as might be done by greater spirit and taste in the drawing. Far more grievous is it that, welcome as is in itself the information they afford, it assures us that the modern street-architecture of Vienna is just the same sort of stuff that our speculation builders give us here at home, in rows of showy-fronted houses run up by wholesale, quite overdone as to tawdry finery, but withal sadly poverty-stricken in character; with no lack of pilasters or columns, but without the slightest study of detail, or intelligence of composition; and, though abounding in little conceits, without the glimmering of an original idea. A heavy window-tax would be a most wholesome corrective for the architecture of Vienna; for some of these façades are absolutely "riddled" with windows from top to bottom, and in the same manner, horizontally, on every floor. The consequence is, they have a most vulgar physiognomy, looking like so many barracks or union-workhouses, bedizen out with finery that makes them still more vulgar and ridiculous in the eyes of those who have any intelligence of architecture, or even any sort of good taste at all.

Just published, beautifully engraved, and carefully coloured, in a neat case for the pocket, price 3s. 6d.,

**DARBY'S MAP OF LONDON;** containing all the most recent improvements, including those of the present year, 1843; with the Railway Stations, Steam Boat Piers, and Public Buildings, prominently distinguished. Accompanied by a complete Index, on a plan affording the greatest facility for reference. The Index contains all the Streets, Squares, Public Buildings, Offices of Societies and Institutions of all kinds, and Places of Amusement. With the addition of much valuable information.

Darton and Clark, Holborn Hill.

**POOLCO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

Now publishing, price Three pence,  
**THE HESPERUS**, an Original Monthly  
 Miscellany of Humour, Literature, and Art,  
 which has for its object the extension of a taste for  
 literary pursuits amongst Youth, enabling young as-  
 pirants to make their productions public in a periodical  
 entirely devoted to those under the age of 21 years.  
 G. Purkess, 60, Dean-street, Soho, to whom all  
 communications are requested to be addressed.

**THE YORKSHIRE FIRE and LIFE  
 INSURANCE COMPANY.** Established at York,  
 1824, and Empowered by Act of Parliament.  
 Capital, £500,000.

 Lord Mayor of London.

Physician—Dr. Jeaffreson, 2, Finsbury-square.  
 Surgeon—W. Coulson, Esq., 2, Frederick's-place,  
 Old Jewry.

Consulting Actuary—Professor Hall, of King's College.  
 Advantages of the Argus Life Assurance Company.  
 Low Rates of Premiums.

In addition to the subscribed Capital of £300,000,  
 the assured have the security of the Company's Income  
 of nearly £60,000 per annum, yearly increasing, and  
 an accumulating Assurance Fund invested in Govern-  
 ment and other available Securities, of considerably  
 larger amount than the estimated liabilities of the  
 Company.

The Rates of Premium are reduced to the lowest  
 scale compatible with the safety of the Assured and the  
 stability of the Company, thereby, in effect, giving to  
 every policy-holder an immediate and certain bonus  
 without risk, in lieu of the deferred and frequently de-  
 lusive prospect of a periodical division of profits.

Annual Premium to Assure £100

Age.	For One Year.	For Seven Years.	Whole Term.
20.....	£0 17 8.....	£0 19 1.....	£1 11 10
30.....	1 1 8.....	1 2 7.....	2 0 7
40.....	1 5 0.....	1 6 9.....	2 14 10
50.....	1 14 1.....	1 19 10.....	4 0 11
60.....	3 2 4.....	3 17 0.....	6 0 10

One third of whole-term Premiums may remain un-  
 paid at 5 per cent. compound interest as a debt upon  
 the policy for life, or may be paid off at any time with-  
 out notice.

In insurances for advances of money, as security for  
 debts, or as a provision for a family, when the least  
 present outlay is desirable, the varied and comprehen-  
 sive Tables of the Argus Office will be found to be par-  
 ticularly favourable to the assured.

A Board of Directors, with the Medical Officers, at-  
 tend daily, at a quarter before two o'clock.

EDWARD BATES, Resident Director.

A liberal Commission to Solicitors and Agents.

This day (October 1st) is published, to be continued every alternate month, the First Number of

## THE BARONIAL HALLS,

PICTURESQUE EDIFICES,

AND

ANCIENT CHURCHES OF ENGLAND;

FROM DRAWINGS MADE EXPRESSLY FOR THE WORK BY J. D. HARDING,

AND OTHER EMINENT ARTISTS.

The whole executed in Lithotint, by Mr. HARDING, with descriptive Letter-press, and numerous  
 Engravings on Wood.

EDITED BY S. C. HALL, F.S.A.

### MODE OF PUBLICATION.

The size of the Work will be Imperial Quarto; and its production will be in all respects commen-  
 surate with the importance of the subject and the advanced state of the graphic and typographic arts.  
 Each Part will contain Three Subjects, executed in LITHOTINT—the patent invention of Mr. Hull-  
 mandel—a method peculiarly suited to such a publication, as combining accuracy of detail with brilliant  
 artistic effects, and having also the advantage of novelty.

Woodcuts, when desirable to elucidate the text or to convey accurate ideas of striking details, will  
 be scattered through the letter-press, which will consist of Twelve pages,—sufficient, it is believed, to  
 furnish all necessary information to the general reader.

Prints, Imperial Quarto, Five Shillings. Proofs, Columbian Quarto, Seven Shillings and Sixpence.  
 Proofs, Imperial Folio, to range with Nash's Mansions, and other works of the same size, Twelve Shillings.

### CONTENTS OF PART I.

COBHAM HALL..... J. D. HARDING.  
 COBHAM CHURCH..... J. D. HARDING.  
 WEST STOW HALL..... W. MÜLLER.

### PREPARING FOR PUBLICATION,

THE

## PRINCIPLES AND THE PRACTICE OF ART,

BY J. D. HARDING,

AUTHOR OF "ELEMENTARY ART."

When the "Elementary Art" was published, the Author promised that it should be followed by  
 another volume, which should carry out and complete a view of Art, founded on the closest observation  
 and study of Nature. Many circumstances, have, however, occurred to prevent him from executing his  
 design until now.

In this, as in his former volume, the great object of the Author is practical utility, attainable only  
 through a knowledge of Nature, and the rationale of Art. It has already been proved, that even the  
 earliest steps in practice cannot be safely or usefully taken but by continual reference to Nature's laws;  
 and these will be here shown in their more comprehensive, but equally practicable, operation, as well as  
 the necessity of a perpetual recurrence to them, whether for the acquisition of power for ourselves, or for  
 the appreciation of it in others.

The subjects theoretically and practically treated of, will be Beauty of Form, Imitation, Compo-  
 sition, Light and Shade, Effect, and Colour.

The Work will form a volume of the same size as "Elementary Art."

Subscribers' Names will be received by the AUTHOR, 4, Gordon-square, London University; by  
 the PUBLISHERS, and the principal Book and Print Sellers.

Post 8vo.,

## A MANUAL OF FRESCO AND ENCAUSTIC PAINTING,

Containing ample Instructions for carrying on all the Operations connected with these Arts; with an  
 accurate description of the methods employed, and the colours and other materials used, by the most  
 eminent artists of ancient and modern times.

Pensées de Pascal, 1 vol.  
F. Didot and Co., Amen-corner, Paternoster-row. A list gratis.

**ART-UNION OF LONDON.**—E. F. WATSON, of 201, Piccadilly (Agent to the above Society), having designed a CHARACTERISTIC FRAME expressly for the Engravings given to its Members, respectfully begs leave to call their attention to it, and feels assured that all who may favour him with their esteemed commands will have every reason to be well satisfied with both price and workmanship; indeed the lively interest he takes in the above Society, causes him to frame the Engravings at an unusually low price.

**LECTURES ON PERSPECTIVE.**

**A COURSE OF SIX LECTURES ON PERSPECTIVE** will be delivered by Mr. HENRY WILKIN, at his residence, 20, Newman-street; the Course to commence on Tuesday Evening, November 7, and conclude on Friday, November 24. The doors open at half-past Seven o'clock, and commence at Eight precisely. Terms for the Course, One Guinea. For Tickets, apply to Mr. R. Jennings, 62, Chesapeake; Mr. Ackermann, 96, Strand; and at Mr. H. Wilkin's, 20, Newman-street.

**SCHOOL OF METHOD.**

**DRAWING CLASSES** under the Sanction of the Committee of Council on Education.  
DIRECTOR—MR. BUTLER WILLIAMS.

**STUDY OF THE HUMAN FIGURE FROM CASTS PREPARED ON THE METHOD OF M. DUPUIS.**

**UPPER SCHOOL, No. 1,** commenced on TUESDAY, OCTOBER 17, and meets on Tuesday Evenings, at six o'clock, at the Drawing Gallery, 184, Maddox-street, Hanover-square.

**UPPER SCHOOL, No. 2,** commenced on TUESDAY, OCTOBER 17, and meets on Tuesday Evenings at a quarter past eight o'clock.

**TERMS.**—For the Course of Twenty Lessons of Two Hours each,—to Schoolmasters, Schoolmistresses, and Workmen, 10s. for the Course; to other persons, 20s. Tickets may be obtained at the Drawing Gallery, 184, Maddox-street, any evening (except Saturday) between Six and Ten.

**TO THE MANAGERS OF SCHOOLS IN LONDON AND ITS NEIGHBOURHOOD, AND ALSO TO THE VISITORS OF THE ROYAL POLYTECHNIC INSTITUTION.**

**THE PUBLIC LECTURES,** by Dr. Ryan, Professor Bachofner, Mr. Goddard, and others, are delivered at Twelve, One, Two, Three, Half-past Four, and at Eight o'clock in the Evening, and usually occupy about half an hour each. They are generally **ELEMENTARY LECTURES,** and are delivered in the most simple and inviting form with a view to combine entertainment with instruction. The subject of the Lectures for each day is suspended in the Hall.—To the valuable APPARATUS for ILLUSTRATION has been added ARMSTRONG'S HYDRO-ELECTRIC MACHINE, and LONGBOTTOM'S OPAQUE MICROSCOPE.—The EXHIBITION ROOMS, with continued novelties, are Open Mornings and Evenings, except Saturday Evenings.

Admission, One Shilling. Schools, Half-price.  
For Instruction in the Private Classes, apply to Mr. R. I. Longbottom, the Secretary.

Four splendid Cartoons by Annibale Caracci, brought from Italy by the late Lord Berwick; and a small Collection of fine Paintings.

**MR. C. WARTON** begs to announce that he has been authorised to SUBMIT to SALE by AUCTION, at the AUCTION MART, opposite the Bank of England, on FRIDAY, NOVEMBER 24, at Twelve o'clock, **FOUR SPLENDID CARTOONS,** in every respect worthy the fame of Annibale Caracci, and ranking amongst the highest productions of Art, each 10 feet by 6 feet 8; viz., 'The Judgment of Solomon,' 'Jacob viewing Joseph's Coat,' 'David playing before Saul,' and 'C. Martinus in the Etrurian Camp.' Also fine Specimens of Murillo, Zucarelli, S. Rosa, Bassano, Van der Neer, Nogari, Lucatelli, Van Uden, Everdingen, Rosa da Ivoli, &c.

Catalogues are preparing, and may be had shortly at the Mart; and of Mr. C. Warton, No. 38, Threadneedle-street.

# GALLERY OF GERMAN ART, 137, REGENT STREET.

NEW WORKS, LATELY PUBLISHED BY  
HERING AND REMINGTON.

- The Dresden Gallery, Nos. 31, 32, 33, just published.  
The Berlin Gallery, Nos. 5 and 6, ditto.  
The Pinakothek, Nos. 60 and 61, ditto.  
The Murillo Gallery, No. 3, ditto.
- The Fresco Paintings of the Royal Chapel of All Saints, at Munich, by H. Hess, coloured and plain.  
The Fresco Gallery of the King's Palace, at Munich.  
The Glass Paintings of the Marienhilf Chapel, at Munich, No. 6, just published, coloured and plain.  
The Entry of Alexander into Babylon, after Thorwaldsen.  
The History of the Modern Arts in Germany, by Raczyński, 3 vols., 4to., and an Atlas of Plates.  
A Guide to German Literature, prose and verse, English and German.  
Retzsch's Illustrations to Shakspeare, "Merry Wives of Windsor," just published.  
Retzsch's Song of the Bell, Faust; Burger's Ballads, and others.  
Illustrations to Goethe's Reinecke Fuchs (40 Plates), by Kaulbach.  
Nibelungen, Lied, illustrated by Bendeman and Hubner.  
Nibelungen, Noth, ditto, by Schnorr and Neureuther. Luder and Bilder, vol. 1 (vol. 2 just published).  
The Book of German Ballads, 30 Illustrations, 4to.  
Baden-Baden, 30 Illustrations.  
Ondine, illustrated with 50 Etchings, German and French, 4to.  
Suppléments au Peintre, Graveur de Adam Bartsch.  
A Series of eight Statuettes of the Old Masters, by Ludwig Schwanthaler.  
The Arts at the Fountain, Bendeman.  
The Jews Mourning at the Waters of Babylon (new lithograph), ditto.  
The Triumph of the Arts, ditto.  
Christ predicting the Ruin of Jerusalem, Begas.  
Christ on the Mount, ditto.  
Joseph and his Brethren, Cornelius.  
Pharaoh's Dream, ditto.  
The Crucifixion, ditto.  
The Last Judgment, ditto.  
The Lower Regions, ditto.  
Various new Works, by ditto.  
Christ on the Cross ("It is finished"), A. Durer.  
Mary Crossing the Mountains, Furich.  
Christ's Incarnation, ditto.  
The Battle of the Huns, Kaulbach.  
The Battle of the Saxons, ditto.  
The Origin of Music, Kloeber.  
Cupid Sharpening his Arrows, ditto.  
Huss before the Council, at Costintz, Lessing.  
Huss Preaching on the Reformation, ditto.  
The Reformation .. .. ditto.  
The Marriage of the Virgin, Overbeck.  
Christ Blessing Little Children, ditto.  
The Holy Family .. .. ditto.  
The whole of the Works of ditto.  
The Italian Shepherd Boy, Polock.  
The Italian Shepherd Girl, ditto.  
Justice Pursuing Crime, Rethel.  
The Murder of the Innocents .. .. Raphael.  
The School of Athens, engraved by Keller, ditto.  
Madonna della Sedia (new engraving), ditto.  
Madonna di San Listo .. .. ditto.  
The Resurrection of the Daughter of Jairus, Steinle.  
The Seven Acts of Mercy .. .. ditto.  
The Three Kings from the East .. .. ditto.  
Joan of Arc .. .. ditto.  
The Tribute Money, Titian.  
The two Marys at the Sepulchre (new lithograph) Veit.  
Introduction of the Arts through Christianity, ditto.  
Germany and Italy .. .. ditto.  
St. Thomas .. .. ditto.  
The Sister Arts .. .. ditto.  
Crowning of the Virgin .. .. ditto.  
The School of Raphael, H. Veret.  
Portraits of Luther and Melancthon, Crauch.  
Ditto Thorwaldsen. Krueger.  
Ditto Cornelius, Schadow, Schuckel, and others.  
Ditto Goethe and Schiller.

Messrs. Hering and Remington having been appointed Agents for all the principal Continental Publishers, as well as for all the Art-Unions of Germany, the personal inspection of the Artist and Amateur is respectfully invited at their Gallery, where all the most interesting Works of Art may be found.

137, Regent-street.

To be continued every alternate Month,  
**THE BARONIAL HALLS,**  
PICTURESQUE EDIFICES, and ANCIENT  
CHURCHES OF ENGLAND, from Drawings made  
expressly for the work, by J. D. HARDING, and other  
eminent Artists; the whole executed in Lithotint by  
J. D. Harding; with descriptive Letterpress, and numerous  
Engravings on Wood. Edited by S. C. HALL,  
F.S.A.

## MODE OF PUBLICATION.

The size of the work will be imperial quarto; and its production will be in all respects commensurate with the importance of the subject and the advanced state of the graphic and typographic Arts. Each part will contain Three Subjects, executed in Lithotint—the patent invention of Mr. Hullmandel—a method peculiarly suited to such a publication, as combining accuracy of detail with brilliant artistic effects, and having also the advantage of novelty.

Woodcuts, when desirable to elucidate the text, or to convey accurate ideas of striking details, will be scattered through the letter-press, which will consist of twelve pages, sufficient, it is believed, to furnish all necessary information to the general reader.

Prints, imperial 4to., 5s.; Proofs, cumbler 4to, 7s. 6d.; Proofs, imperial folio, to range with "Nash's Mansions," and other works of the same size, 12s.

In one volume, post 8vo.,

**A MANUAL OF FRESCO AND ENCAUSTIC PAINTING;** comprising ample instructions for carrying on all the operations connected with these Arts, with an accurate description of the methods employed, and the colours and other materials used for these purposes by the most eminent Artists of ancient and modern times. By W. B. SARGFIELD TAYLOR, Curator of the Living Model Academy.

In the press, in one volume, royal 4to.,

**THE PRINCIPLES and the PRACTICE of ART.** By J. D. HARDING, Author of "Elementary Art."

When the "Elementary Art" was published, the author promised that it should be followed by another volume, which should carry out and complete a view of Art, founded on the closest observation and study of nature. Many circumstances have, however, occurred to prevent him from executing his design until now.

In this, as in his former volume, the great object of the author is practical utility, attainable only through a knowledge of nature, and the rationale of Art. It has already been proved that even the earliest steps in practice cannot be safely or usefully taken but by continual reference to nature's laws; and these will be here shown in their more comprehensive, but equally practicable operation, as well as the necessity of a perpetual recurrence to them, whether for the acquisition of power for ourselves, or for the appreciation of it in others.

The subjects, theoretically and practically treated of, will be Beauty of Form, Imitation, Composition, Light and Shade, Effect and Colour.

The work will form a volume of the same size as "Elementary Art."

Chapman and Hall, 180, Strand.

**SCHOOL OF ART, No. 6, CHARLOTTE-STREET, BLOOMSBURY.**—This School, established and carried on many years by Mr. Sass for the EDUCATION of ARTISTS, and the Instruction of Amateurs in Figure and Landscape Drawing and Painting in Oil and Water-colours, Modelling, Etching, &c., possessing every requisite as a Probationary School for the Royal Academy, is now conducted on the same principles as heretofore by Mr. F. S. CARY, with the aid of Mr. REDGRAVE, A.R.A., who is engaged as Visitor.

The Studios contain an extensive collection of Casts from the Antique, Drawings, Works of Art, and Folios of Prints from the Old Masters.

\*.\* There is a separate Establishment for Ladies.

Mr. F. S. CARY may be spoken with from nine till eleven, at the School, where printed particulars of the terms are to be had.

## E. G.'S TRACING PAPER.

**THE** Proprietor of the above begs to return his grateful acknowledgments for the extensive patronage afforded by Artists, Surveyors, Engravers, Civil Engineers, &c. &c.

The consumption being much greater than anticipated by the manufacturer, extra hands have been employed, and he can now promise that the demand shall be better met than formerly; and, although it is allowed to be superior to any paper of the kind yet introduced, he thinks that his present improvements, combined with the very moderate price, will put competition quite out of the question.

N.B.—Every sheet of E. G.'s Tracing Paper is stamped thus—

Sole Agent—T. HORNE, Seal and Copperplate Engraver, 2, Thanet-place, Temple Bar (late of 233, Strand).

**DISEASED AND HEALTHY LIVES ASSURED.**  
**MEDICAL, INVALID AND GENERAL LIFE OFFICE,** 25, Pall Mall, London.—CAPITAL, £500,000.—This Office is provided with very accurately-constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.

The Extra Premium discontinued on restoration of the Assured to permanent health.

Increased Annuities granted on unsound Lives, the amount varying with the particular disease.

Members of Consumptive Families assured at Equitable Rates.

Healthy Lives are Assured at lower rates than at most other offices.

Policies of twelve months' standing are not affected by Suicide, Duelling, &c.; and Assigned Policies are valid from the date of the Policy, should death ensue from any of these causes.

Loans granted on Personal Security.

F. G. P. NEISON, Actuary.

**THE YORKSHIRE FIRE and LIFE INSURANCE COMPANY.** Established at York, 1824, and Empowered by Act of Parliament. Capital, £500,000.

## PATRONS.

The Archbishop of York	Sir W. B. Cooke, Bart.
The Marquis of Londonderry	Sir W. A. Ingilby, Bart.
Earl Fitzwilliam	Sir Tatton Sykes, Bart.
The Earl of Tyrconnel	Sir E. M. Vavasour, Bart.
The Earl of Zetland	Sir S. Crompton, Bt., M.P.
The Earl of Yarborough	The Archdeacon of York.
The Bishop of Ripon	Archdeacon of the East-Riding
Viscount Morpeth	The Archdeacon of Cleveland
Lord Wharfedale	John Henry Lowther, Esq., M.P.
Lord Feversham	G. F. Barlow, Esq.
Lord Hotham, M.P.	Robert Cracroft, Esq.
Lord Howden, K.C.S.K.	Robert Denison, Esq.
Lord Wenlock	Henry Preston, Esq.
Lord Worsley, M.P.	P. Saltmarsh, Esq.
Hon. E. R. Petre	Marmaduke Wyvil, Esq.
Sir G. Strickland, Bt., M.P.	Actuary and Secretary—Mr. W. L. NEWMAN, York.
Sir Francis Lawley, Bart.	London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the Public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

Extract from the Table of Premiums for Insuring £100.

Age next birth-day.	Male.	Female.
10	£1 7 6	£1 5 4
30	2 5 0	1 19 9
50	4 1 9	3 13 3
70	10 0 4	9 7 6
80		15 12 10

Fire Insurances are also effected by this Company, on the most moderate terms. Farming Stock Insured without the Average Clause.

Prospectuses with the Rates of Premium and every information may be had at the Head Office in York, or of any of the Agents.

Agents are wanted in those Towns where no appointments have been made.

## COMPOSITION FOR WRITING WITH STEEL PENS.

**STEPHENS' WRITING FLUID.**—These Compositions, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—

A BLUE FLUID, changing to an intense black colour.

A PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep blue colour.

A superior BLACK INK, of the common character, but more fluid.

A superior CARMINE RED, for Contrast Writing.

A CARBONACEOUS RECORD INK, which writes instantly black, and, being proof against chemical agents, is most valuable in the prevention of frauds.

Also a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from evaporation and dust.

Bottles at 3d. each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense.

Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London.

Sold in bottles, at 3d., 6d., 1s., and 3s. each.

Be sure to ask for Stephens' Writing Fluid.

N.B. These unchangeable Blue Fluids are patent articles: the Public are therefore cautioned against imitations, which are infringements, to sell or use which is illegal.

## STEPHENS' SELECT STEEL PENS.

The utmost possible care having been bestowed upon the manufacture of these articles, so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

## NOTES ON BRITISH COSTUME.

## PART THE SIXTH.

BY FREDERICK W. FAIRHOLT.

THE accession of King James I. interfered in no degree with the costume of the country. The monarch had, in fact, more luxuries to conform to than introduce; yet it had perhaps been well for the country if he had in this matter interfered more, and in graver ones less, as his ruling desire to be considered as the "British Solomon," a character posterity has laughed away from him, did infinitely more mischief by the solemn foolery of inundating the land with pedantic jargon, than all the tailors and milliners of France could have done, had they come over in a body, shears in hand, to trim awkward Englishmen into shapes the most preposterous fashion could invent.

James's cowardice, among his other failings, made it a matter of solicitude with him to guard his person, at all times unwieldy, with quilted and padded clothing, so that it might be ever dagger-proof. It was so far fortunate, for a man of his idle turn, that he needed no innovation of a striking kind to indulge in this costume, for the stuffed and padded dresses that had become fashionable in the reign of Elizabeth continued to be worn in all their full-blown importance; the sumptuary laws, which had always proved singularly inefficient, were all, with one exception, repealed in the beginning of his reign; and this single exception soon sharing the fate of the rest, laws of this kind have ever been deemed too contemptible and impolitic to be again introduced into the British code.

"A Jewell for Gentrie" appeared in 1614, in the shape of a goodly volume devoted to hunting and other fashionable methods of killing time,

and it was decorated with a full-length figure of James and attendants hawking, from which the

above copy of his Majesty was executed. "The great, round, abominable breech," as the satirist terms it, now tapered down to the knee, and was slashed all over, and covered with lace and embroidery. Stays were sometimes worn beneath the long-waisted doublets of the gentlemen, to keep them straight and confine the waist.\* The king's hat is of the newest and most approved fashion, and not much unlike those worn but a few years ago; it has a feather at its side, and it was not uncommon to decorate the stems of these feathers with jewels, or to insert a group of them in a diamond ornament worn in the centre of the hat; and hatbands, richly decorated with valuable stones, were also frequently seen; or a single pearl was hung from a centre ornament that secured the upturned brim. Stubbes, speaking of the hats worn in his time, says, "Sometimes they use them sharpe on the crowne, pearking upp like the spere or shaft of a steeple, standyng a quarter of a yard above the crowne of their heads, some more, some lesse, as please the fantasies of their inconstant mindes. Othersome be flat and broad in the crown like the battlements of a house. Another sort have round crownes, sometimes with one kind of band, sometimes with another, now white, now black, now russet, now red, now greene, now yellow, now this, now that, never content with one color or fashion two days to an end. And as the fashions be rare and strange, so is the stuff whereof their hats be made divers also, for some are of silk, some of velvet, some of taffetie, some of sarcenet, some of wool, and, which is more curious, some of a certain kind of fine haire; these they call *beaver hattes*, of xx, xxx, or xl shillinges' price, fetched from beyond the seas, from whence a great sort of other vanities doe come besides."†

The full-length portraits of the Earl and Countess of Somerset, for ever rendered infamous by their connexion with the murder of Sir Thomas Overbury, and which are here engraved (see next col.) from the rare contemporary print, will well display the points that marked the costume of the nobility about the middle of James's reign. The earl's hat and ruff are unpretending and plain; but his doublet exhibits the effect of tight lacing, while his trunk-hose, richly embroidered, strut out conspicuously beneath. His garters, which at

\* Sir Walter Raleigh, who combined an excess of dandyism with a mind immeasurably superior to that of the majority of fashionables, is delineated in a waist that might excite the envy of the most stanch advocate for this baneful fashion.

† This is the earliest notice of the beaver hat we have. Stubbes published the first edition of his "Anatomy of Abuses" in 1580.

this period took the form of a sash tied in a bow at the side of the leg, have rich point lace ends;

and his equally gorgeous shoe-roses, verify the satire of old John Taylor, the water-poet, when he declares that the gallants of the day

"Wear a farm in shoe-strings edged with gold,  
And spangled garters worth a copyhold."

Jewels were sometimes worn in the ears of the gentlemen, who frequently cherished a long lock of hair, which was allowed to hang upon the bosom, and was termed a "love-lock."

The countess wears a rich lace cap, of the fashion which Mary Queen of Scots most frequently patronised, which is ornamented by a rich jewel placed in the centre of the forehead; a double row of necklaces with pendants; a ruff of point lace, which, unlike the ladies' ruffs of the preceding reign, stands up round the neck, being stiffened with starch, which was used of various colours, according to the taste of the fair wearers. Yellow was the fashionable tint, and Mrs. Anne Turner, who was executed for poisoning Overbury, and who was a starcher of ruffs, and intimate friend of the countess, herself patronised the fashion as long as she was able, and appeared at the gallows in a ruff of the approved colour; but her eagerness in displaying this taste acted contrary to her last wishes, and the fashion incurred an odium therefrom sufficient to banish yellow starch from the toilet of the fair.

The hanging sleeves are sufficiently inconvenient, and cumbrous with embroidery, that decorate the arms of the countess; but what are they to the wheel farthingale within which she is imprisoned? If we look at the last part of these notes, page 186, we shall there find that the variation in this article of female attire, since the death of Elizabeth, has only added an extra degree of rigidity and discomfort to the ugliest of all fashions, and which, being originally invented to conceal the illicit amours of a princess of Spain, and having nothing either in character or appearance to recommend it, was adopted with the singular perversion of taste that sometimes welcomes monstrous novelties by every lady rich enough to afford one. The principal variation from the fig. alluded to, consists in the row of pleats that surround the waist, and the embroidered band down the centre, which continues round the bottom of the dress.

In the curious old comedy called "*Lingua; or the Combat of the Tongue and the Five Senses for Superiority*," a whimsical account is given by one of the characters of the articles comprising a fashionable lady's dress, and the length of time necessarily occupied in arranging all in order. He says, "Five hours ago I set a dozen maids to attire a boy like a nice gentlewoman; but there is such doing with their looking-glasses, pinning, unpinning, setting, unsetting, formings and conformings, painting blew vains and cheeks; such stir with sticks and combs, cascanets, dressings, purples, falles, squares, buskes, bodies, scarfs, necklaces, carcanets, rebatoes, borders, tires, fans, palisades, puffs, ruffs, cuffs, muffs, pusles, fusles, partlets, frisllets, bandlets, fillets, crolets, pendulets, amulets, annulets, bracelets, and so many

lets,\* that yet she is scarce drest to the girdle; and now there's such calling for fardingales, kirtlets, busk-points, shoe-ties, &c., that seven pedlers' shops—nay, all Sturbridge fair—will scarce furnish her: a ship is sooner rigged by far than a gentlewoman made ready."

The cut here given will display the female costume at the close of the reign of James I. It is copied from one of the figures at the side of the tomb of John Harpur, in Swarkestone Church, Derbyshire. He died in 1622; and this figure exhibits his young daughter. Her farthingale appears to have again gone back to the more convenient form of that article of attire as displayed during the reign of Elizabeth, but is still less inconvenient; as it became older, it gradually approached the form of a loose gown, the ordinary female dress of the succeeding reign. She wears a tight bodice with a long waist, a small ruff, and wide sleeves, to which are affixed pendent sleeves. Her hair is combed back in a roll over the forehead, and she wears a small hood or coif, with a frontlet. These frontlets were sometimes allowed to hang down the back, but were as frequently turned over the head, as this lady wears hers, and brought forward to shade the face, according to the taste or disposition of the wearer. They came into fashion during the reign of Henry VIII., and went out in that of James I., so that this figure may be considered as exhibiting the latest form of that, and the farthingale. These frontlets were sometimes embroidered and ornamented with precious stones, and were consequently of considerable value. In Ellis's Letters we meet with an item in the time of Henry VIII.:—"Payed for a frontlet in a wager to my lady Margaret, £4."

The works of popular authors of this reign abound with allusions to the prevailing fopperies, of which it will be manifestly impossible to narrate a tythe here. John Taylor, the water-poet, alludes to the reckless extravagance of those who

"Wear a farm in shoe-strings edged with gold,  
And spangled garters worth a copyhold;  
A hose and doublet like a lordship coat,  
A gaudy cloak, three manors' price almost;  
A beaver band and feather for the head,  
Prized at the church's tythe, the poor man's bread."

And Samuel Rowlands, in one of his rare and curious tracts, "A Pair of Spy-knaves," recently brought to light by the Percy Society, speaking of the "Roaring Boys" of his time, says, that—

"What our neat fantastica newest hatch,  
That at the second hand he's sure to catch.  
If it be feather time, he wears a feather,  
A golden hatband, or a silver either;  
Waisted like to some dwarfe or costed ape,  
As if of monsters misbegotten shape  
He were engendered, and, rejecting nature,  
Were new cut out and stitched the taylor's creature;  
An elbow cloake, because wide hose and garters  
May be apparent in the lower quarters.  
His cabbage ruffe, of the outrageous size,  
Starched in colour to beholders' eyes."

The affectation of expensive costume is well

\* Hindrances, the legal phraseology is still "without let or hindrance."

ridiculed by the same author in the following short story:—

"A giddy gallant that beyond the seas  
Sought fashions out, his idle pate to please,  
In travelling did meet upon the way  
A fellow that was suited richly gay;  
No lesse than crimson velvet did him grace,  
All garded and re-garded with gold lace.  
His hat was feather'd like a ladie's fan,  
Which made the gallant thinke him some great man,  
And vail'd unto him with a meek salute,  
In reverence of his gilded velvet sute.  
'Sir' (quoth his man), 'your worship doth not know  
What you have done, to wrong your credit so;  
This is the *beefe* in Dutch, in English plain  
The rascal hangman, whom all men disdain;  
I saw him tother day, on Castle-green,  
Hang four as proper men as e'er were seen.'"

These exaggerations in costume became considerably tained down by the Puritanism of feeling and the soberness of manners consequent to the troubles that visited England in the reign of Charles I. To expatiate on the elegance and simplicity of a costume immortalized by the pencil of Vandyke, would indeed be a work of supererogation; his works, too, are so numerous and so accessible, at least under the form of engravings, that it will be unnecessary to do more than mention them, and narrate from other and less accessible sources the more remarkable varieties of costume that occur during this unfortunate period of our history. These two figures may be taken as average types of the or-

dinary dresses of persons in the middle classes of society. The young man wears flowing hair; a plain "falling band," as the collar was termed when of this fashion; a doublet of a form still worn by Thames watermen, gathered at the waist, with wide sleeves, and plain white linen cuffs. His trunk-hose are wide, and are in the Dutch fashion, they are ornamented at the knee by rows of puffed ribands, the garters being tied at the sides in a large bow. His shoe-roses and hat are both extravagantly large; independently of that, the dress is simple and elegant, and the most picturesque worn by gentlemen for a very long time previous. The print from which it is copied is dated 1645. The indefatigable Hollar has supplied the figure of the lady, and it occurs among the female costume in his "Ornatus Muliebris Anglicanus," bearing date 1645; a most useful series to the artist, as he has delineated with the very acme of fidelity and carefulness the costume of every grade in society. This figure is "The Gentlewoman" of the series; her hair is combed back over her forehead and gathered in close rolls behind, while at the sides it is allowed to flow freely. A long bodice laced in front incases the upper part of the figure; a white satin petticoat flowing to the ground, which is fully displayed as the dark open gown, is gathered up at the waist. Her sleeves are wide and short, with a deep white lawn cuff turned back to the elbow; and she wears long white leather gloves.

A fashion was, however, introduced in this reign that met with just reprehension at the hands of the satirists: it was that of patching the face. Bulwer, in his "Artificial Changeling," 1650, first

alludes to it. "Our ladies," he says, "have lately entertained a vaine custom of spotting their faces out of an affectation of a mole, to set off their beauty, such as Venus had; and it is well if one black patch will serve to make their faces remarkable, for some fill their visages full of them, varied into all manner of shapes:" some of which he depicts on a lady's face, which is here copied from his woodcut, and it is a very curious speci-

men of fashionable absurdity; a coach, with a coachman, and two horses with postillions, appears on her forehead; both sides of her face have crescents upon them; a star is on one side of her mouth, and a plain circular patch on her chin. These must not be considered as pictorial exaggerations, for they are noticed by other writers; thus, in "Wit Restored," a poem printed 1658, we are told of a lady that:—

"Her patches are of every cut,  
For pimples and for scars;  
Here's all the wand'ring planets' signs,  
And some of the fixe stars  
Already gummed, to make them stick,  
They need no other sky."

The fashion continued in vogue for a long time, for in the "Ladies' Dictionary," 1694, we are told "they had no doubt got a room in the chronicles among the prodigies and monstrous beasts, had they been born with moons, stars, crosses, and lozenges upon their cheeks, especially had they brought into the world with them a coach and horses!"

This very curious representation of a first-rate exquisite is copied from a very rare broadside printed in 1646, and styled "The Picture of an

English Anticke, with a List of his Ridiculous Habits and Apish Gestures." The engraving is a well-executed copperplate, and the description beneath is a brief recapitulation of his costume, from which we learn that he wears a tall hat, with bunch of riband on one side and a feather on the other, his face spotted with patches, two love-locks, one on each side of his head, which hang upon his bosom, and are tied at the ends with silk ribbon in bows.\* His beard on the upper lip encompassing his mouth; his band or collar edged with lace, and tied with band-strings secured by a ring; a tight vest, partly open and short in the skirts, between which and his breeches his shirt protruded. His cloak was carried over his arm. His breeches were ornamented by "many dozen of points at the knees, and above them, on either side, were two great bunches of riband of several colors." His legs were incased in "boot hose-tops tied about the middle of the calf, as long as a pair of shirt-sleeves, double at the ends like a ruff-band; the tops of his boots very large, fringed with lace and turned down as low as his spurs, which ginkled like the bells of a morrice-dancer as he walked;" the "feet of his boots were two inches too long." In his right hand he carried a stick, which he "played with" as he "straddled" along the streets "singing."

The Roundheads were a very different kind of people; they obtained that name from the more worthless cavaliers, from the cropping of their hair, which they did so closely that their heads looked sufficiently spherical, except where its rotundity was marred by their ears, which stood out in bold relief from the nakedness around them.\* The figures here given of Puritans are obtained

from contemporary sources: that of the female from a print dated 1640; that of the male from the title-page to "The Rump; or, an exact collection of the Choicest Poems and Songs relating to the late Times," printed 1662. Both figures speak clearly for themselves, and their utter simplicity render a detailed description unnecessary. This display of plainness, however, was anything but a type of innate modesty, as those persons were no whit less vain of their want of adornment than the gallants were of their finery, as it served to point out the wearer for a distinction among his fellows. Thus everything worn by the Puritans became meanly and ridiculously plain, and the short-cut hair, thin features, and little plain Geneva bands, were marks by which they were known. In the "Rump" songs is a very curious poem, entitled "The Way

\* These love-locks continued long in fashion, and sometimes reached to the waist. They were bitterly denounced by the Puritans. Prynne wrote a book against them which he entitled the "Unloveliness of Love-locks;" and Hall in 1654 printed another "On the Loathsomeness of Long Hair."

\* A song printed in 1641, entitled "The Character of a Roundhead," thus commences,

"What creature's this with his short hairs,  
His little band, and huge long ears,  
That this new faith hath founded.  
The Puritans were never such,  
The saints themselves had ne'er so much;  
Oh, such a knave's a Roundhead."

to woo a zealous Lady," written and published in ridicule of this class of the community, which is valuable for the detail it gives of the costume of cavaliers and Puritans. A fashionably-attired gentleman describes his visit to woo a Puritan lady, and he says,

"She told me, that I was too much prophane,  
And not devout, neither in speech nor gesture;  
And I could not one word answer again,  
Nor had not so much grace to call her sister;  
For ever something did offend her there,  
Either my broad beard, hat, or my long hair.  
"My band was broad, my 'parel was not plain,  
My points and girdle made the greatest show;  
My sword was odious, and my belt was vain,  
My Spanish shoes were cut too broad at toe;  
My stockings light, my garters ty'd too long;  
My gloves perfum'd, and had a scent too strong.  
"I left my pure mistress for a space,  
And to a snip-snap barber straight went I;  
I cut my hair, and did my corps uncase  
Of 'parels' pride that did offend the eye;  
My high-crown'd hat, my little beard also,  
My pecked band, my shoes were sharp at toe.  
"Gone was my sword, my belt was laid aside,  
And I transformed both in looks and speech;  
My 'parel plain, my cloak was void of pride,  
My little skirts, my metamorphos'd breech,  
My stockings black, my garters were ty'd shorter,  
My gloves no scent; thus march'd I to her porter."

The sequel of the tale is soon told; he is admitted, and most favourably received by the lady. It will from these remarks be gathered, that the dresses of the various classes of the community possessed a considerable mixture, for each followed the bent of his own inclination, during this distracted period of our history. When Cromwell obtained the ascendancy, the fashion of plain attire was paramount: an attention to dress never troubled a mind intent on higher imaginings. Sir Philip Warwick's description of him, as he observed him in the House of Parliament before he had become an important man, is valuable for the truthfulness and minutia of its details. He says,—"The first time that ever I took notice of him was in the beginning of the Parliament held in November 1640, when I vainly thought myself a courtly young gentleman, for we courtiers valued ourselves much upon our good clothes. I came one morning into the house well clad, and perceived a gentleman speaking, whom I knew not, very ordinarily apparelled, for it was a plain cloth suit, which seemed to have been made by an ill country tailor; his linen was plain, and not very clean; and I remember a speck or two of blood upon his little band, which was not much larger than his collar; his hat was without a hatband; his stature was of a good size; his sword stuck close to his side." The appearance of such men, and their rapid accession of power, must not a little have astonished the "courtly young gentlemen" who "valued themselves much upon their good clothes," the only thing worth notice about them, and which they were probably right in valuing, destitute as they were of other qualities.

The gloomy Puritanism that overshadowed the land for a time, and pent up the natural cheerfulness of the heart—which could rail at a May-pole as a "stinking idol," and frown down all innocent festivities as sinful—was occasionally rebelled against by some few daring spirits, who would wear their hair above an inch in length, and collars broad enough to cover their shoulders, well trimmed with lace. Strutt notices that, in 1652, John Owen, Dean of Christ Church, and Vice-chancellor of Oxford, dressed in "powdered hair, snake-bone bandstrings, a lawn band, a large set of ribbands pointed at the knees, Spanish leather boots with large lawn tops, and his hat most curiously cocked," or turned up at the side. There were many others who still kept up the cavalier fashions and festivities, and were ever ready to exclaim with Shakspeare's *Sir Toby Belch*, "What, dost thou think because thou art virtuous there shall be no more cakes and ale?"

No small impetus was given to the restoration of Charles II. by the desire of the people to rid themselves of this gloom that overshadowed "merrie England;" and when the master-mind of his party

had ceased to exist, and bequeathed his temporal power to his amiable son, the excellent Richard Cromwell, the perfect imbecility of the rest was glaringly apparent, and Charles was allowed to enter the kingdom amidst the most unrestrained joy, and Richard Cromwell gladly retired into the privacy of country life.\* The English were never remarkable for great gaiety. The old foreign traveller's description, "they amused themselves sadly (that is seriously or discreetly) after their country's fashion," is as happy a phrase as could well be conceived. But their long pent-up spirits now found full vent, and a degree of reckless gaiety and debauchery found its way into the kingdom with a sovereign whose patronage of everything bad and vicious has obtained him the title of the "Merry Monarch," and established the fact that to flatter vice is to obtain a privilege of exemption from censure. The gross profligacy of the times, as given by contemporary writers, is scarcely to be conceived as existing in a land professedly Christian, and under a king for whom the title of "Most sacred Majesty" was coined.† The courtiers and monarch flooded the land with new fashions, the extravagant character of which may be seen from a glance at Ogilby's book detailing the ceremonies of his coronation, in which plates are given of the procession, from which source the cut here given of a nobleman and his footman has

been obtained. The fashions were those of France, where Charles had so long resided, and in which the vain courtiers of their vain master, "Louis le Grand," delighted to display themselves. Enormous periwigs were now first introduced of a size that flings into the shade any modern judge's wig, however monstrous; and it became the mark of a man of *ton* to be seen combing them in the Mall, or at the theatre. The hat was worn with a broad brim, upon which reposed a heap of feathers; a falling band of richest lace enveloped the neck; the short cloak (usually slung loosely across the shoulders, or carried on the arm) was edged deep with gold lace, as also was the doublet, which was long and straight, swelling outward from the waist. Wide "petticoat-breeches," puffed forth beneath, ornamented with rows of ribbands above the knees,

\* He appears to have been totally forgotten, and to have preserved a rigid seclusion. He lived to see the Stuarts expelled the kingdom, and made his last public appearance, when an old man of eighty, during the reign of Anne, as a witness in the law courts of Westminster-hall. He was taken over the Houses of Parliament, and while in the House of Lords, he was asked how long it was since he was last there? "I have never entered here," said the old man, pointing to the throne, "since I sat in that seat."

† As Charles increased in wickedness, the writers of the day appear to have increased in flattery. As late as 1682, when the country was on the brink of ruin, and the King steeped to the lips in infamy, [the accounts of his private life and the scenes at court, as given by Pepys and Evelyn, being almost astounding,] a song in his praise was sung at the Mayor's dinner in Guildhall, declaring him to be a King

"In whom all the graces are jointly combin'd,  
Whom God as a pattern has set to mankind."

and deep lace ruffles hung beneath them. The servant of the gentleman in the cut is equally richly dressed, for they imbibed the universal feeling, and shared in the general recklessness. Charles himself had sometimes scarcely a decent cloak to wear, as his servants stole them to sell, and thus obtain their wages.

The dresses worn at the early part of the reign by the quieter country gentlefolks may be seen in the above cut; it is copied from the tomb of Jonathas Sacheverell and Elizabeth his wife, dated 1662, in Morley Church, near Derby. The gentleman wears a plain cap with a white border, a large collar, cloak, and doublet of equally modest pretensions; and his lady might vie with a Quakeress in plainness, the long black veil she wears being almost monastic. They were, no doubt, good, sincere, unpretending kind of people, who

"Shook their head at folks in London,"

and kept the even tenour of their way with a firm resistance of new fashions and "French kick-shaws."

The ladies of the court are so well known by the paintings of Lely, that their elegant and graceful costume need only be alluded to here. Mr. Planché has happily described it in a few words, "a studied negligence, an elegant dishabille, is the prevailing character of the costume in which they are nearly all represented; their glossy ringlets escaping from a simple bandeau of pearls, or adorned by a single rose, fall in graceful profusion upon snowy necks, unveiled by even the transparent lawn of the band or the partlet; and the fair round arm, bare to the elbow, reclines upon the voluptuous satin petticoat, while the gown of the same rich material piles up its voluminous train to the background."

Pepys, in his "Diary," has given many curious particulars relating to dress.\* He notes down his wearing apparel with all the gusto of vanity. His "white suit, with silver lace to the coat;" his "camlet cloak, with gold buttons;" his "jackanapes coat, with silver buttons;" are mentioned along with items of the gravest kind. In March 1662, he writes—"By and by comes *la belle* Pierce to see my wife, and to bring her a pair of perukes of hair, as the fashion is for ladies to wear, which are pretty, and of my wife's own hair." Next month he says,—"Went with my wife to the New Exchange to buy her some things, where we saw some new-fashion petticoats of sarsnet, with a black, broad lace, printed round the bottom and before, very handsome." In the same month he says,—"I saw the King in the park, now out of mourning, in a suit laced with gold and silver, which it is said was out of fashion." In 1663 he sees the King riding there, with the Queen, in "a white laced waistcoat and a crimson short petticoat, and her hair dressed *a-la-neglignence*, mighty pretty."

Under October 30, of the same year, he writes,—"£43 worse than I was last month; but it hath chiefly arisen from my laying out in clothes

for myself and wife, viz., for her about £12, and for myself about £55, or thereabouts, having made myself a velvet cloak, two new cloth skirts, black, plain, both; a new shag gown, trimmed with gold buttons and twist, with a new hat, and silk tops for my legs; two perriwigs, one whereof cost me £3, and the other 40s. I have worn neither yet, but I will begin next month, God willing." Under Nov. 30, he writes—"Put on my best black suit, trimmed with scarlet ribbons, very neat, with my cloak lined with velvet, and a new beaver, which altogether is very noble."

Under May 14, 1664, he writes, "To church, it being Whit-Sunday, my wife very fine in a new yellow bird's-eye hood, as the fashion is now." June 11 he notes, "Walking in the gallery at Whitehall, I find the ladies of honor dressed in their riding garbs, with coats and doublets with deep skirts, just for all the world like mine, and their doublets buttoned up the breast, with perriwigs and with hats, so that, only for a long petticoat dragging under their men's coats, nobody would take them for women in any point whatever, which was an odd sight, and a sight that did not please me."

October 6, 1666, he writes, "The King hath yesterday in council declared his resolution of setting a fashion for cloaths, which he will never alter;" and on the 15th of the same month he says, "This day the King begun to put on his vest, and I did see several persons of the House of Lords, and Commons too, great courtiers who are in it, being a long cassock close to the body, of long cloth, and pinked with white silk under it, and a coat over it, and the legs ruffled with white ribband like a pigeon's leg, and upon the whole I wish the King may keep it, for it is a very fine and handsome garment."

The cut of Charles II. and a courtier here given, is copied from the frontispiece to "The Courtier's Calling," and depicts the plainer costume adopted at the close of the reign. The hair is, in fact, the only extravagance about it, and one can scarcely imagine the volatile Charles in so stiff and plain a dress. Toward the end of his reign it became still plainer, and the doublet and vest were worn considerably longer, the first reaching beyond the knees, the other being but little shorter. During the brief and unhappy reign of his brother the same fashion prevailed, and gentlemen appeared in little low hats, with a bow at the side like those worn by Yeomen of the Guard; long coats and waistcoats, with rows of buttons down the front; breeches, moderately wide, reaching to the knee; close stockings, high-heeled shoes, and roses or buckles. The ladies dressed as simply and elegantly as before.

[The costume worn by the clergy, military, &c., during this period, will be described next month.]

\* Charles altered the trimming of this dress very soon, for, under Oct. 17, Pepys says, "The coat is full of vests, only my Lord St. Albans not pinked, but plain black; and they say the King says, the pinking upon white makes them look too much like magpies, and hath bespoken one of plain velvet."

## CORRESPONDENCE.

### BRITISH MUSEUM.

SIR,—It is greatly to be feared that the time for suggestion or expostulation, as regards the British Museum, is quickly passing away, and that they must now be succeeded by vain regrets and bitter reproaches. Instead of paying any attention to the remonstrances urged in various quarters, it seems to have been the policy of the architect, and those under whose immediate authority he acts, to render all advice or interference nugatory, by proceeding with the works in the most expeditious manner possible. Not only is the south-west angle of the main building or façade itself erected *in the rough*—being left to be afterwards *cased* with stone—but, although it does not yet show itself to the street, the whole line of buildings forming the west side of the front court is raised to a considerable height. This range and the corresponding one on the opposite side, will be for the official residences, that is, will be mere dwelling-houses, Grecianized, perhaps, after a fashion, by some strips of pilasters inserted between the windows. It is probably conceived that these portions of the design will, by contrasting with, serve to set off and enhance the effect of the colonnaded façade between them; yet far likelier is it that they will totally destroy all harmony of design, and even vulgarize the ensemble. Nothing of the ordinary dwelling-house character ought to be suffered to intrude into a classical composition for a *monumental* edifice; on the contrary, although treated subordinately to the centre, or principal architectural mass, the extremities of such a composition ought to correspond with it and fully bear it out, and to be in themselves not drawbacks on, but additional beauties in, the general design. However, it must be as Sir Robert Smirke pleases; the public will have another specimen of his enlightened taste and exquisite fancy, and both they and he too will have to pay for it; therefore it is to be hoped that he has nerved himself to endure all the vituperation he will now of a certainty incur. Sir Robert may have his admirers, but they praise him in a most singular way. After assuring us that he undoubtedly has "genius," one of them tells us that it does not, indeed, "reside in the inventive, the creative, and the imaginative," hitherto considered the elements of high artistic talent, but "in the mean, and avoids the extremes!" meaning, I suppose, that he possesses a peculiar genius for *mediocrity*, which is, undoubtedly, true enough, but a very singular sort of compliment, unless it be meant as irony, which it certainly does very much resemble. I remain, &c.,

ANTI-MEDIOCRIS.

### EFFECTS.

SIR,—In a book lately published, entitled "Modern Painters, their Superiority in the Art of Landscape Painting to all the Ancient Masters," by a Graduate of Oxford, it is asserted that "the horizontal lines cast by clouds on the sea are not shadows, but reflections," and that on clear water near the eye "there never can be even the appearance of a shadow," except a delicate tint on the foam; and the Graduate tells us, that this, amongst many other rules, "is universal and incontrovertible."

I wish to ask the author of this incontrovertible rule whether, when on the seaside, he has never observed the shadows of clouds passing over the fields, and from them to the sea, so that the same cloud at the same time darkened both earth and sea with its shadow? And also whether these shadows are not as decided on the sea as they are on a grass field?

I have at this minute before my eyes a clear sea without mist, on which are not only the sharply-defined shadows projected by clouds, but also shadows and reflections (both very distinct) of near shipping, *the shadows and reflections being very nearly at right angles with each other*, the former cold with the clear blue of the sky, the latter generally warm with the local colours. Moreover, did the Graduate never observe what every one sees.—the shadow of the crest of a wave projected on the adjoining wave, not merely on the foam, but on the clean, pure water? And with regard to the "delicate tint" on foam, in favour of which he makes a slight exception to his rule, I have to observe, that the more perfect the foam the *less* delicate is the shadow of any object upon it—the more minute and complicated the air bubbles, the more opaque is the foam, until it becomes as susceptible of shadow as a chalk cliff or white paper.

But such mistakes as these are not so injurious to his reputation as a writer on Art as his gross and absurd exaggerations when describing the works of the old masters, with which works, by the by, I do not believe he is quite so extensively acquainted as he would have us suppose. In the chapter on which I have commented he says, "I wish Ruysdael had painted one or two rough seas." If he merely refers to the catalogue of the British Institution he will find that there are more than "one or two" in his own country. One exhibited at the Institution a few years ago was a very important picture, both as to size and quality, and the sea was very rough indeed. There is also a fine "Rough Sea," by Ruysdael, in the Louvre, which has been copied by several British artists.

Yours, &c.,

I. H. M.

\* Pepys was Secretary to the Admiralty, and so moved in first-rate society, and was frequently at court.

## SCHOOLS OF DESIGN.

[We direct the attention of our readers to the articles which follow this heading—the one, a Report of a Discourse delivered by Mr. Bell, at Manchester; the other, of Mr. Ker's Address at Birmingham. They augur something like a move on the part of the "School of Design"—which, we trust, is about to do something—something, that is to say, of which England will be the better; for although we by no means desire to insinuate that the School has done nothing, it is pretty certain that very little of the good doing, or done, has, as yet, been made public.]

A DISCOURSE DELIVERED BY J. Z. BELL, ESQ.,  
Director of the School at Manchester.

I have been requested by the Committee of the School of Design to give occasional short discourses upon matters connected with the object of the Institution, of which I am the director, in hopes that they may tend, in some way, to its advancement.

The object of the Institution being the cultivation of good taste generally, although it is particularly addressed to the improvement of our ornamental work, every one seems to be of opinion that these discourses should be of as popular a character as possible; that they should not be confined to the students, or particularly addressed to them (indeed they the least require any hints it could be in my power to give, for they are daily before, and studying and examining minutely, the most beautiful examples of the practical adaptation of principles of fine taste); but it is thought that it might be of as much importance to address ourselves to their employers and the purchasers of their produce; to endeavour to turn the attention of those among them who have not yet thought of it, to the consideration of beauty; to induce them to seek an acquaintance with those principles of taste which have been digested and brought forward by great men in their works of Art, and to contemplate and examine the wonderful and beautiful appearances in nature, upon which all sound principles of taste in design are founded. Accordingly, I have thought it best to give not such particular things as lectures, but, as I have said, discourses, bringing under the consideration of my hearers what I have noticed in the works of great men, or such views of natural appearances, or notions of their adaptation and management for the purposes of ornamental design, as may from time to time occur to me, and to induce my audience to enter upon the consideration of the subject; and, after my discourse is finished, to discuss the notions I may have brought forward, or anything else of the kind which they may have observed or read. To-night I propose to bring before you my view of the cause of the establishment of Schools of Design, and the object proposed by it.

I have not thought it necessary for me to inquire how it was, or when it was, that the notion first became, as I believe, pretty current in this country—that attention to beauty, either in dress or furniture, was a consideration beneath a man of sense—that because durability and fitness for bodily ease were valuable qualities, they were on that account the only valuable qualities—that all other considerations were superfluous, and not only that, but frivolous and contemptible. Though these notions now are not so commonly urged as they have been not very long ago, yet we still occasionally hear, uttered with great appearance of self-satisfaction, such declarations as this—"I consider what is *useful*, not ornamental;" the term "*useful*" being conferred in most cases upon what is, in reality, no more than an inordinate attention to bodily ease or effeminacy; and the refined or intellectual pleasure is stigmatised (not directly, but, by the antithesis, quite distinctly) as the opposite of useful, *i. e.*, useless, or something worse. This absurd and coarse sophistry has certainly had its effect in lowering the tone of society in Britain generally, introducing a homeliness unconnected with either good sense or correct reasoning, and which has exposed us to the sneers of those among our Continental neighbours who are in reality much our inferiors. It has, besides, debased the produce of our industry, misleading, very seriously, our manufacturers; for many of them, losing sight of the obvious intention of fine clothes and fine furniture—which is certainly not merely to afford warmth or ease, but magnificence or beauty—have

for long boasted of the superior durability of British stuffs; and, as if that were all that could be desired, have attributed to fastidious volatile caprice the preference which purchasers could not help giving to the more elegant productions of neighbouring countries. This argument, too, every one, from patriotic feeling, felt disposed not only to allow, but to advocate, and to bear down any attempt to bring forward foreign trumpery. Such a way might do for a while, and it certainly has done for a tolerably good while; but, when people uniformly found that those Continental productions gave to their dress an air which it was vain to expect from their own, and to their saloons a style not felt before; that when their feelings were excited and raised by intellectual stimulants, such as poetry or fine music, these elegant objects appeared in harmony with that elevated tone of feeling, consequently produced a very pleasurable sensation; while the homely look of the English articles (however honestly they might be got up) distinctly jarred with them, they of course preferred in the places devoted to social or intellectual enjoyment the more refined decorations and objects of convenience or luxury. This superiority of foreign articles was felt by all; though some might affect to underrate it, it was in vain to question it, and no one attempted such a course; but, unlike themselves in other matters, Britons made up their minds to admit their superiority, and to try to account for it by the weakest reasoning, rather than make the least struggle to rival them. Some, forgetting the enchanting works of our poets—forgetting the *Romeo and Juliet* of our Shakspeare—the countless elegancies of the "*Faerie Queene*," or the sublime beauties of our Milton—roundly asserted that an Englishman was incapable of refinement; and most people have agreed to admit that there was in a Frenchman's physical composition a *je ne sais quoi* of elegance which you never could elicit from matter-of-fact heavy John Bull. This was said, too, by people who could be very witty upon what they called the absurd superstitions of others; and it is curious to think how long such a foolish notion passed unquestioned. However, at length the truth has been fairly ferreted out, and it has been discovered that there is no witchcraft in the case: that the Frenchman's refinement is the result of distinct application to such a matter; that the French artisan studies the principles of beauty for years—that he undergoes an artist's education, and gets a very wide acquaintance with general principles of taste, by which he is enabled, first, to collect materials, and then to make a proper use of them.

I cannot help thinking that this idea of a Frenchman's innate elegance, &c., may be something akin to a very common notion, and which appears to me to be productive of much mischief. I allude to a way of talking of taste and genius, and their wonderful doings unassisted by labour.

A natural good feeling will enable a man to acquire by study correct ideas in matters of taste; but a very little reflection will suffice to convince us of the impossibility of a man giving an opinion of any value upon a subject he does not thoroughly understand. Very little taste surely is shown by thrusting forward crude undigested speculations, and the pretensions to taste which are advanced by half-informed indolent people would be more correctly termed whims or caprice. Taste can have no place without sound judgment; and, for my part, I cannot see the soundness of that judgment which allows one to rush upon a matter with all whose bearings one is not well acquainted.

Genius, too, may assist an artist to apprehend the characteristics of appearances quickly; but it cannot show him any short road to the power of representing them. No; the man of genius must undergo the same labour to acquire correctness of eye, and power of hand, as the man of no genius. I have, along with other artists, observed that what is usually pointed out by connoisseurs as strokes of genius in works of Art has no more to do with genius than the dexterity with which the joiner or weaver wields his tools; they are mere *coups de main*, not *coups d'esprit*, the effects of practice, and a facility generally acquired by beginning early in life.

An error like these, and arising like them from ignorance, is the notion that a pattern-designer, if he had once learned to handle his tools, could design patterns out of his own brain. It would both take up too much time, and (as I conceive) be

quite superfluous to enter into arguments to prove the fallacy of this; suffice it to remind you that man cannot create: all the most beautiful patterns and ornaments in existence are referable, or rather owe their origin, to appearances in nature; and even those which do not seem directly to resemble any particular natural object are yet entirely built upon natural principles of beauty; that such and such surfaces, in nature, have such and such an effect, or that an appearance of such a kind requires such a combination. To get as large an acquaintance as possible with the endless variety of appearances in nature, *i. e.*, to amass as great a collection of materials, and to acquire as wide a knowledge of the principles by which combinations are made in nature, and of the effects which they produce—these should be the aims of the ornamentist—to these the Frenchman directs his attention; he acquires a power of drawing, a power of taking notes correctly and readily of the appearances which present themselves to him—and then a knowledge of the principles of combinations to assist him in using his materials; for these ends the Government of that country provides carefully, as the statement made by our talented President with regard to the school at Lyons, in a letter published about ten days ago in the *Guardian*, can well show. It was with a view of furnishing the English artisan with the same advantages that Schools of Design have been instituted in this country; and although, from some reasons with which I am not perfectly acquainted, our rulers have not yet been able to determine exactly what mode of education should be pursued, yet they all appear to think that these schools should be to afford practice in drawing of some sort, and an acquaintance with fine ornaments of the different styles; accordingly, for the first end, they are furnished with models of every kind—and for the last, with casts and books of ornament of a prodigious variety.

Now study in such an academy, in whatever way directed, *must* be of advantage. The artisan will have both practice in drawing, and his mind exercised by general speculations on the principles by which the finest ornaments have been contrived. In this school we make use of the models best suited to give the student a power of drawing to correct the eye and break in the hand.

After the student has acquired the power of drawing, he gets an acquaintance with the various styles of different ages. Along with these there are forming, both in this school and in all the others, collections of natural objects upon which the students practise their first observations of nature; and, if these opportunities were duly appreciated, there can be no doubt that the consequences upon our ornamental manufactures would be very remarkable. The importance of a general cultivation of fine taste it is, I hope, at this time useless to advocate, or to demonstrate the admirable effects it would have upon all our social arrangements. What attractions it gives to the country where its influence reigns—what numbers of our nobility and gentry and people of fortune leave their native country to enjoy themselves abroad: I do not mean those who travel about here and there for diversion or information, but those who take up their residence for a length of time in Italy or elsewhere—on account of the charm spread over everything by the cultivation of the principles of fine taste, and the regard paid by all ranks to the beautiful and graceful.

I believe, however, that now these notions are being generally allowed a footing. The appointment of Schools of Design by our Government is a prodigious step in advance; and if the public can be brought to consider and fairly admit the great importance of the matter and its excellent consequences, I feel assured that the energy Britons have shown in other things will enable them in this to advance at least as far as any of our Continental neighbours.

## BIRMINGHAM.

A special meeting of the committee of the Birmingham Society of Arts and School of Design has been held at the rooms of the Institution, for the purpose of hearing from Mr. Bellenden Ker (a member of the Council of the Government School of Design in London) an explanation of the views, objects, and intentions of the Legislature, in promoting and endowing provincial schools of design.

Mr. Ker having been introduced to the meeting

by the chairman, Joseph Walker, Esq., he stated that\* the school in London was originally established with a view to improve the character and style of their manufactures, as it had long been felt as a great drawback to the industry of this country, that they had none of those schools of design which had rendered France, Germany, and Italy, so eminent as regarded decorative Art as applied to manufactures. They experienced at first great difficulty in obtaining a grant of money for the purpose of establishing their school; but he felt it only an act of justice at the same time to acknowledge the interest taken in the subject, and the support which the council in London had received from Lord Sydenham, Lord Brougham, and, since his admission to office, from Sir Robert Peel, and other noblemen and gentlemen who fully appreciated the important object in view; and, as regarded Sir Robert Peel, he seemed inclined to do more to encourage and create a love of Art amongst the people of this country than any other minister who had preceded him; and, in doing so, he believed he was actuated no less by a desire to improve the character of their manufactures, than to contribute thereby to the civilization and refinement and happiness of the great mass of the people. Reverting to the establishment of the school in London, Mr. Ker observed that the council had experienced great difficulty at the outset in procuring competent masters; indeed they found it utterly impossible to obtain the services of artists who were used to decorative design, and the teaching of drawing on sound principles. In consequence of this difficulty, the first thing they did was to found a normal school in London, of the success of which the committee in Birmingham had had ample opportunity of judging in the high qualifications, talents, and industry of Mr. Dobson, who had been sent down to them to preside over their school here. That gentleman had, however, much to acquire in reference to the principles of design as applicable to particular branches of their manufactures, and he had no doubt, in making himself acquainted with this part of his duties, he would receive the cordial co-operation of those who were most competent to render him assistance. They would tell Mr. Dobson what were their wants, and what were the conditions under which drawings and designs were to be made, and inform him of every thing connected with the prevailing fashion and taste, as was done by the manufacturers of France and other countries. He regretted to say that great apathy existed in London respecting the object for which their school of design had been established, and this difficulty, he believed, could only be removed by establishing provincial schools, and by this means operating upon the tastes of the people, who would in time demand from the manufacturers a different style of article to those which they had been in the habit of making. In the provincial schools, also, they would be able to educate masters conversant with the various branches of manufacture, and who would have opportunities, in the intervals of their periodical vacations, of attending the London school, and thus interchanging with one another the information they had acquired. Mr. Ker said that it was intended to hold an exhibition in Paris, early next year, of specimens of French manufacture; and the council in London purposed sending over Mr. Wilson, to inspect those articles, and bring back specimens of each, and then, comparing them with the equivalent English manufacture, ascertain the extent of foreign superiority. No great progress would be made until the people were better educated in matters of taste, and demanded from the manufacturer articles of a more refined style. The English workmen must be made better artists, and the artists must become better acquainted with the processes of the manufacturer; they must do what Raffaele and his pupils did—condescend to study and to practise decorative art, and he had no doubt that they would yet have pupils in Birmingham of sufficient genius and talent to embellish by their works their magnificent Town Hall. Connected with this subject, he would take the liberty of directing attention to an omission in their by-laws, which did not provide for the regular instruction of young men who might feel disposed to devote themselves

\* For the report of Mr. Ker's valuable and interesting address we are indebted to the columns of the *Midland Counties Herald*—a journal that has done more than any other provincial paper to foster and strengthen Art in the provinces.

exclusively to the study of drawing, with the view of becoming artists—a subject which he felt confident would receive the consideration of the committee, as by their regulations in London ample provision had been made for cases of this kind. Mr. Ker afterwards noticed the importance of encouraging schools of design, as a means of extending the manufactures of their country, and concluded by saying, on the part of the Council in London, that they would be most happy to render them every assistance in their power, either in the way of advice, or of supplying them with books and drawings.

At the close of Mr. Ker's address, the Rev. J. P. Lee moved a vote of thanks to that gentleman, for his clear, able, and satisfactory explanation of the objects of the Government in endowing and promoting schools of design, and for his kindness in attending the present meeting. The motion was briefly seconded by Mr. Westley Richards.

The Chairman, in putting the resolution, said he was sure that he but expressed the feeling of the meeting in saying, that they all felt deeply indebted to Mr. Ker for the interest he had taken in the progress of the school; and he hoped, when the object was fully understood by the manufacturers of the town, and when they became alive to the advantages that would accrue to them from improvements in taste and design, that the school would meet with that support which it deserved. He also trusted that the manufacturers themselves, wherever they found indications of talent amongst their workpeople, and others with whom they might come in contact, would induce them to attend the School of Design for improvement. He was quite satisfied that there was great room for an improvement of taste in the articles they manufactured in Birmingham, and he feared, unless they took a decided step in advance, that the manufactures of the town, as well as those of the country generally, would suffer materially in a comparison with the productions of other countries. He had seen specimens of manufacture introduced from time to time from various parts of the Continent, which he thought should make them more anxious than they had hitherto been for an improvement in this respect, if they hoped to make progress abroad in these matters. He was sure the gentlemen connected with the school in Birmingham would give Mr. Dobson all the assistance in their power, by making him acquainted with those branches of manufacture where drawing and design were of importance. The Chairman observed, in conclusion, that they were all obliged to Mr. Ker for the kindness with which he had undertaken to give them the benefit of his advice and assistance, and he assured him that the members of the committee would always be anxious to ascertain the views of the Council in London, and to act in a spirit of harmony with them.

Mr. Ker acknowledged the vote of thanks, and the meeting separated.

#### ART IN CONTINENTAL STATES.

**FRANCE.**—*The late Duke of Orleans.*—The monument to the memory of this Prince, which has been placed in the chapel of St. Ferdinand at Sablonville, was executed by Triqueti, after designs by Ary-Scheffer, an artist whom the Duke honoured with his friendship.

*Roman and Gaulish Antiquities.*—There has been published some account of the Gaulish and Roman remains within and near the site occupied by the city of Paris, but especially on the left bank of the Seine. It is written by the late M. Jollois, surveyor in chief of bridges and highways, whose researches on the subject extend beyond those of all who have preceded him.

*Antique Sculptures.*—The ship Expedition has lately arrived at Havre from the coast of Asia Minor laden with Greek remains. Among these treasures is a sarcophagus of singular beauty, and the frieze almost entire, of the Temple of Diana at Magnesia, which is said to have been more beautiful than that at Ephesus, from which it is distant four hours' journey. The temple was destroyed in the first century by an earthquake; one side fell upon hard ground, by which the marble was broken; but the other three sides were projected outwards into a swamp, whereby the sculptures have been preserved uninjured, and whence they have now been recovered despite many difficulties.

*The Princess Marie.*—A statue in bronze of Joan of Arc, after the marble at Versailles, by the Princess Marie, has been erected at Domremy, the birthplace of the heroine.

The decorations of the Chapel for the Blind, to be executed by M. Sehman, will amount in cost to 30,000 francs (£1200 sterling), according to a decision of the Minister of the Interior.

*Our Notice of the Louvre Exhibition.*—A correspondent of *Les Beaux Arts* writes at some length on our notice of the exhibition of this year. He does not attempt to defend the mannered affectation of the bulk of French landscape productions, whose authors have mistaken insipid eccentricity for elevation of style. At the head of this section of artists is Bertin, who has essayed to carry into his works the manner and sentiment of Ingres.

*The Discovery of Painting in Oil.*—In one of the periodicals devoted to antiquities and art, the claims of John and Hubert Van Eyck respectively, to the honour of the discovery of oil painting, are patiently investigated. The disquisition is interesting, though rather curious than profitable. We speak of the brothers Van Eyck, but when they are separated, it is rather of John than of Hubert that we speak; and when a monument was erected, it was the statue of John, and the name of Hubert remained unhonoured through an error of Vasari, copied by Van Marden, Ridolfi, Borghini, Lanzi, Felibien, and all who have compiled from them. This writer shows, almost beyond question, that the discovery was made by Hubert, although John availed himself of it the more successfully of the two.

*The Heart of Saint Louis.*—The discovery made at the Sainte Chapelle, of a heart supposed to be that of Saint Louis, has given rise to a long correspondence between M. Letronne and M. Le Prevost: the former supporting the original supposition and the latter combating it with much learning and ingenuity.

*Fraudulent Sales.*—At a late sale of the pictures and drawings of J. B. Greuze, it was discovered that many of the works submitted were not by this artist, but by members of his school: a false attribution, which caused intending purchasers to doubt the authenticity of others. The most remarkable and barefaced attempt at imposition was in the case of two portraits, said by the vendors to be those of Napoleon and Talleyrand—between the legs of the latter was a large sabre and appendages, but little in harmony with his habits.

A monument of white marble has been erected to the memory of Marshal Moncey, in the Church of the Invalides, of which institution he was governor at the time of his decease.

*Painting on Glass.*—M. Sami de Mozan, who has been occupied during some years at Toulouse, has just finished the windows of the Cathedral of Agen. The designs are commemorative of the principal events of the lives of Saints Caprais, Stephen, Vincent, and other patrons of this church, which is of the architecture of the tenth century.

The Municipal Council of the city of Paris have voted the funds necessary for the completion of the façade of the Church of St. Vincent-de-Paul, and for the erection of six large ornamental figures. The sculptors are not yet selected.

*Nicolas Poussin.*—Les Andelys, the birthplace of this great artist, is of itself too poor to erect a monument to his memory. Contributions have however been gathered among the inhabitants, whose efforts are seconded by a commission formed under the auspices of the Minister of the Interior, composed of deputies, and presided over by the Duc de Broglie. Many of our own great men had for their birthplaces, wealthy cities, but there lives among us little of that compatriotic pride and gratitude which loves to do honour to worth departed.

*Pseudo-Originals.*—A picture dealer who was acquainted with Mignard, having announced that he had received from Italy a beautiful Magdalen by Guido, all the amateurs in Paris crowded to see it. It was ultimately sold for 2000 francs (£80): and some time afterwards the purchaser was informed that he had been duped, the picture being the work of Mignard, whereon he immediately waited on Mignard, who referred him to Lebrun, as fully qualified to decide the matter. The amateur invited Mignard and Lebrun to dine

with him, and the latter of the guests having some time considered the work, pronounced it positively to be a production of Guido. Mignard being invited to give an opinion—"This Magdalen," said he, "is by me, and I if proof of the fact be wanting, there is painted under the hair of the fair penitent the beret of a cardinal;" which he immediately proceeded to show by rubbing a portion of the hair with some oil. "Be it so," said Lebrun, somewhat mortified, "continue to paint Guidos, and discontinue your Mignards."

**ANGERS.**—A monument is about to be erected in this city to the memory of General Beaufort. M. David is commissioned for the work. At the recent session of the Scientific Congress of France, the following subjects among others were discussed:—"The law—by virtue of which have been successively developed Architecture, Sculpture, Painting, and Music." "Does not Christian Art offer in its phases, points to which the mind ought especially to attach itself in the creation of new works?" Papers were also read on the relative effect of painting and sculpture—the results of the provincial exhibitions—the uses of the grotesque in Art, &c., &c.

**TOULOUSE.**—The Academy of Floral Games propose for the competition of 1844 an Eulogium on Dante. The prize will be an eglantine of gold of the value of 450 francs.

**GERMANY.—BERLIN.**—Another museum—being the third, is about to be formed here, and the famous Raczinsky collection is about to be arranged in a gallery especially provided for it. In order to attach Cornelius to Berlin, the King has assigned him a property in a new quarter of the city. In one of the new squares a monument to Peace is being erected; it is to be a column of twenty feet in height, surmounted by a bronze statue of Victory, by Rauch, much in the style of the works executed by him for the Walhalla at Munich.

**Elections.**—At a late general assembly of the Royal Prussian Academy of Arts, fourteen new members were elected; of these, five are historical painters, and among them the French artist Ingres; one sculptor, one architect, one engraver, three medallists, two lithographers, one carver on wood, and one painter of genre. The prices paid in Germany are by no means so high as in England; but from this announcement it would appear that encouragement is given in quarters most likely to make a grateful return. We cannot look forward to a future comparison without real misgivings: among ourselves the proportions would have been reversed—five professors of genre, one painter of history, or, most probably, the whole six would have been genre painters.

**Beethoven.**—The drawings for the monument of Beethoven by the sculptor Hahnel have been exhibited. The pedestal of the statue will be ornamented with four medallions, in which will be represented by allegorical figures, sacred, lyric, dramatic and instrumental music.

The Professor Begas has been commissioned to execute portraits of the most famous living Prussians, but it is not yet determined whether they shall be painted in series or collectively. It has been suggested to adopt the method of Holbein—that of grouping many upon one canvas, as seen in the Barber Surgeons' Hall in London.

**Erasmus.**—In a paper contributed to the "Kunstblatt," we find this time-honoured name among those of members of the schools of the Low Countries. It is said by Houbraken and Dirk Van Blayswick, that he studied painting in his youth, and they mention a 'Crucifixion' executed by him after his travels through Germany, France, and Italy, with Bishop Kamerik. This curious work is in the Stein convent near Gouda, and bears the following legend:—"Hæc Desiderius—ne spernas—pinxit Erasmus olim in Steineo quando latebat agro."

**Numismatic Eccentricities.**—A discussion has arisen between the numismatists of Berlin and Paris, in consequence of an article which appeared in the "Revue Numismatique." These disputes are not only amusing but profitable to those of the public interested in antiquities who are likely to become the dupes of dealers in false coins. In a letter on this subject the following passage occurs:—"Denon entertained the ingenious idea of imitating for the new Queen, Caroline Murat, the antique coinage of Naples. He caused therefore to

be struck a small medal, bearing on the obverse the portrait of the Queen, and the legend *KAROLINA BAZILISSE*, and on the reverse the bull with the human head, crowned by Victory." This whim of M. Denon has elicited in the controversy much curious information with respect to the manner of counterfeiting ancient coins.

**CASSEL.**—At a recent sitting of the Academy of Fine Arts, it was determined that Cornelius, Schadow, and Thorwaldsen should be invited to become members.

**FRANKFORT.**—Launitz is occupied on a monument which is to be erected in the Rinnmarkt, in memory of the invention of printing. We know not what relations exist between the city of Frankfort and the discovery of typography, but it is commonly understood that Strasburg and Mayence were the places of residence of Guttenberg when busied with his wooden types.

The last oil picture of Philip Veit is a repetition of his fresco, 'Germania,' so well known from the engraving. This work is destined for Brunswick, and differs from the fresco, inasmuch as to the sublime beauty of the original is added a charm of colour and power of expression which place it among the most beautiful of modern works of Art. It is however to be lamented that this admirable production has been so injured in its transport as to render restoration necessary. Veit has also painted two pictures for the Hall of the Emperors: these are Otho I. and Henry VII., presented by the Kings of Prussia and of the Netherlands.

The new exchange by Stülen is nearly completed. It is an imposing edifice, very solidly built of freestone of two colours, reddish and grey of a greenish tone. It is to be regretted that this fine building has been erected on a site so surrounded by other buildings, which negative that effect which such a building would have produced had it been otherwise situated. Of the statues by which it is to be ornamented, two are already placed at the entrance, these are 'Prudence and Hope'—others, representing Commerce, and the great divisions of the Earth, will be placed on high pilasters, and occupy positions in the façade.

The colossal statue of Charlemagne, left unfinished by Wendelstadt, is completed, and will soon be raised to its destined site on the bridge over the Main.

**The Monument of Goethe.**—A place is appointed for this memorial in the square near the theatre, as an experiment with respect to diminishing the circulation of vehicles in that quarter, but whether the situation is the most eligible is another question. Goethe himself would find but little gratification in the contemplation of the surrounding buildings and houses, and would rather have sought the walks of the west-end of the City, where also the most agreeable site would have been found for his statue.

**MUNICH.**—Professor Schnorr has been occupied ten years in the frescoes in the apartments leading to the throne-room of the Palace. These halls are three in number, each devoted to the life of one of the celebrities of German history: Charlemagne, Frederick Barbarossa, and Rudolph of Hapsburg. The Hall of Charlemagne is the last in course of execution; the narrative lies in a series of twelve pictures, the subjects of which are 'Charlemagne at the age of eleven years receiving the homage of the spiritual and temporal ranks'; 'Refusing the proposition of the King of the Lombards'; 'His first battle with the Saxons'; 'Drives the Lombards out of Germany'; 'Entrance into Rome'; 'Capture of Saragossa,' &c. &c. The execution of these works has been singularly rapid: the artist being of course assisted by his pupils.

**VIENNA.**—It is evident from every exhibition that Austria is behind the other European powers in the formation of a school of painting, notwithstanding the encouragement of the Government and the number of native artists. We see here little but landscape, genre, and portrait. Some, however, of the Austrian painters have made reputations which have spread throughout Germany, as Schödeberger, Steinfeld, and Sattler. Many artists have devoted themselves to animal painting, the chief of whom is, perhaps, Ranftl, surnamed 'the Raffaele of the dogs.' Our own Hogarth seems to be a great favourite among the Austrian artists, if we may judge by the many imitations of his style exhibited this year.

**DUSSELDORF.**—The exhibition of the present year is much less important than those of past seasons, in consequence of so many of the most distinguished painters being occupied in extensive fresco commissions. It is, however, not wanting in works of high merit, inasmuch as far to excel the exhibitions of the other Rhenish cities. Among the historical works, two pictures of the same subject are of great excellence: 'The Attempt by Peter Vineis on the Life of the Emperor Frederick II. by Poison.' The names of the artists are Schrader and Kiderich. Both pictures are good, though differently treated. The work of the former is strikingly dramatic, while the other is strongly epic in its sentiment. 'Semiramis,' by Kohler, is a work which even excels his picture of the 'Discovery of Moses,' upon which his reputation is founded. Zimmermann exhibits 'Judith with the Head of Holofernes.' Siebert, a debutant of Neuwied, has produced a picture bespeaking a talent which will soon raise the artist to distinction: the subject is 'Luther at Worms.' By Benzon, is exhibited 'The Death of Saint Canute,' a composition full of movement and power of expression. Among the landscape painters, Schirmer, Pose, Lange, Scheirs, &c., are pre-eminently distinguished.

**RUSSIA.—ST. PETERSBURGH.**—The Emperor has conferred on the architect, Von Klenze, the honours of the Order of St. Stanislaus, first class, as a mark of approbation of his design for the construction of the museum in the Winter Palace. The celebrated French painter, Horace Vernet, has also received the insignia of the Order of St. Anne, second class.

**SWITZERLAND.—GENEVA.**—M. Roulez, professor of Archaeology in the University of this city, has published recently a work, the result of long and intense study, on the subject of "Ancient Vases, and the Signification of the Designs and Ornaments found upon them." Among the curious facts brought forward by this writer, it is mentioned that in the collection of the Chevalier Pizzati at Florence there is a vase on which is represented the 'Judgment of Paris,' wherein the artist, contrary to mythological tradition, does not cause the apple to be given to Venus but to Juno. There can be no doubt with respect to the intention of the artist, because Juno is easily recognised by her diadem, her veil, long tunic, and sceptre. Venus is equally distinguishable by the myrtle branch which she holds in her hand. M. Roulez explains this design, by attributing it to an artist of the sect of the Sophists; because with this sect it was a principle to combat all received opinions. Thus have they attempted to establish Helena as a model of conjugal virtue, as, according to certain of the writers of the sect, it was only a semblance of Helena that was sent to Troy by Jupiter to excite discord. It is not then extraordinary that these writers should attempt to represent Paris as a hero, for such would seem to be the character here given to the young Trojan.

**ITALY.—ROME.**—The public attention has been excited by the results of the researches prosecuted in the necropolis of Veii and elsewhere. In the last tomb which was opened there were discovered, besides portraits of men and horses on the walls, figures of animals painted with fantastic colours, as in modern arabesques.

**Ancient and Modern Sculptures.**—There have lately been despatched hence to France many large pieces of ancient and modern sculpture. Besides ancient bas-reliefs and columns of precious marble, which have been discovered at a great expense, there is also one of the most beautiful productions of Canova, 'Mars and Venus,' a group which the biographers of Canova have regarded as his *chef-d'œuvre*.

**Antique Remains.**—A publication of some magnitude has lately appeared on the plastic works of the ancients. It contains numerous lithographic plates of objects of curiosity, which have been collected from the ruins of Latium, Etruscan tombs, and in researches instituted on the site of ancient Rome. They consist of statues of all sizes, bas-reliefs, friezes, and of all similar ornaments employed by the ancients in the decoration of their houses. Among them is described, as existing at Ostia, the ornaments of an ancient residence, the ceiling of which is perfect, and affords an interesting example of the taste and elegance with which the ancients constructed their houses, even when employing the

most commonplace materials. The ceiling consists simply of brick, but it is as elaborately ornamented as the marble walls of a temple. Upon the bricks are inscribed the names of the Consuls Petinus and Ventidius Apronianus, a date which refers us to a flourishing period of Roman Art—the age of Adrian.

**FLORENCE.**—By the society who have charged themselves with the erection of monuments in memory of great men, two new statues have been added to those already placed in the Palace of the Uffizi—these are statues of Boccaccio and Orgagna. The latter stands opposite the Loggia, looking upwards as if contemplating his work. If the proposed number of these statues be completed, there will be twenty-eight—those of Dante, Michael Angelo, Leonardo da Vinci, and Lorenzo the Magnificent, are already placed.

**Galileo.**—By command of the Grand Duke an apartment has been formed in the Palace of the University, to be called the Tribune of Galileo, in which is placed the statue of the great astronomer. The eyes of the figure are directed upwards, and the mouth is partially open, as if about to announce the truths he discovered. The statue is accompanied by four busts—those of his friend the Benedictine Castelli, and of his pupils Cavalieri, Torricelli, and Viviani.

**GiOTTO and Dante.**—The recently-discovered fresco, by Giotto (according to Vasari), is in the chapel of the Palace of the Podesta, which, having been turned into a state prison, the work was not only forgotten, but even covered with whitewash, from which, thanks to the exertions of our countryman, Mr. Kirkup, it has been cleansed. This is the composition in which has been discovered a portrait of Dante in his youth, and of which a facsimile has already been exhibited at Berlin, before passing into the hands of Fischer for a lithograph.

**VERONA.**—In the Basilica of St. Stephen has been discovered a large fresco, by Giotto, the subject of which is the Crucifixion. The composition excites a particular interest, as containing a portrait of Dante in his youth. We presume that the work meant here is that lately discovered at Florence.

**VENICE.**—The monument of Titian, intended for the Church de' Frari, is in progress under the direction of the sculptor Zandomeneghi. It will stand opposite that of Canova.

**CARRARA.**—The increasing demand for statuary marble is a matter of surprise to all conversant with this market. It is probable, however, that the sales at this place will suffer some diminution from the opening of other quarries, especially those of Montignosa, which yield a stone of singular purity and brilliancy. The prices are, perhaps, now lower in England than they have ever been—bearing no comparison with those paid by Chantrey and other sculptors during the war. We would gladly, however, see even a further reduction, since so much stone turns out worthless even after the carving is far advanced.

**TURIN.**—The gallery has lately received valuable acquisitions in Raffaele's 'Madonna della Tenda,' two pictures by Guido, a battle by Vandermeulen, &c. &c.

**BOLOGNA.**—It has been determined to erect a monument to Rossini in the Philharmonic Lyceum of this city. It will represent the genius of music crowning the bust of the great composer. The artist is the Professor Baruzzi, of the School of the Fine Arts.

**PARMA.**—By order of the Grand Duchess the Chevalier Toschi is busied in making drawings after the famous frescoes of Correggio in the cathedral and the chapel of St. Paul.

**ANTWERP.**—The Council of the Royal Academy have determined upon the restoration of the pictures in their valuable museum, and the administration of the city has approved of this decision. This important operation has been confided to M. Paul Kiewerts, who commences with two pictures by Vandyck.

**Rubens.**—The statue of Rubens is at length placed upon the pedestal. The operation was performed quickly and with perfect success. It stands in the Place Verte, though a year or two ago, on the occasion of the Rubens festival, we remember seeing the model placed on the quay, facing the Scheldt. The statue is fourteen feet in height, and the entire monument measures thirty. The evening was

celebrated by an illumination by the inhabitants of the Place Verte, and the bands of the regiments in the garrison performed alternately during the evening.

**DENMARK.**—**COPENHAGEN.**—Among the most remarkable works of this exhibition may be mentioned two fragments of a large frieze, by Jerichau, representing the 'Marriage of Roxana,' 'Love Whetting his Arrows,' by Bissen; the bust of the deceased clay modeller, Weyse, by Kolberg; and a horse, life size, by Adelgunda Von Herbst. The most conspicuous of the landscapes are 'The Rocks of the Island of Moen,' by Garlitt; 'Etna, from Messina, at sunset,' by Kloss; 'Scene on the Danish Coast,' by Landby; 'Wood Scene,' by Stallgard. Among the genre subjects, the best are the scenes in Italy, by Sonne and Naadsig; 'The Tyrolean Bird Catcher,' by Schleisner, is an excellent picture. Other remarkable works, of a higher tone of Art, were—a 'Coronation,' by Court; the 'Death of Correggio,' by Kuchler; the 'Saviour blessing his Disciples,' by Muller. The walls were crowded with portraits, but there were few of high merit. The most striking of the architectural designs was the 'Observatory of Tycho Brahe,' at Prague, by Lossow.

**Golden Reliques.**—In Denmark many vessels and other objects of gold are found. The first discovery of this kind took place in 1685, when six urns were dug up in the island of Munko. The most valuable of these remains have lately been turned up by the plough, near Boeslunde, being two golden urns, which were imbedded in the soil within a few inches of the surface. No information can be gained as to the purpose for which these vessels have been constructed. They do not consist of pieces welded or otherwise joined, but of one single piece, hammered into form with an art so exquisite as to defy the imitation of the most accomplished workers in metals.

**ALGIERS.**—At Cherchel, which is undoubtedly the ancient Julia Cæsarea, a beautiful statue of white marble has been discovered. It is the figure of a youth, of from fourteen to fifteen years of age, life-sized and perfectly naked, sitting in the trunk of a tree, busied in extracting a thorn from his foot. The head and arms have long been wanting, as is seen from the colour of the fractures.

#### NECROLOGY.

**PARIS.**—M. Jean Pierre Cortot, sculptor, member of the Institute, professor at the school of Fine Arts, and officer of the Legion of Honour.

At the age of 92, M. Thomire, one of the most distinguished carvers of the French school. His works in wood, marble, and bronze are found among the most valuable acquisitions of the cabinets of Europe. From the condition of a simple artisan he raised himself by his talent to the consideration of a celebrated artist and the direction of an extensive establishment.

At the age of 40, the well known engraver Geille, whose loss is generally and deeply lamented. In 1832 he obtained, at Rome, the highest prize.

#### FRESCO PAINTING.

##### MR. WILSON'S REPORT.

WE continue this valuable "Report," and give Mr. Wilson's "Descriptions of Paintings in Fresco by different Masters."

##### TITIAN.

"The St. Christopher, on the wall of a back staircase in the Ducal Palace at Venice, is very rich in colour, but there is no tone in it that has not been obtained by means of the usual fresco colours. This picture has been painted with great rapidity, apparently in two days, as there are traces of joining in one place only. The outline has first been carelessly marked in with the point, without any cartoon, and the artist has altered it considerably as he painted. In some places parts of the drapery have been put in without any outline having previously been made, and the background has been hastily rubbed in at the same time with the figure, and is very slight and careless. Titian has hatched over a great part of this picture in a free but somewhat clumsy manner. The intonaco, which is about three-sixteenths of an inch in thickness, has fallen off in some places, showing that it was spread on the brick wall without any previous plastering.

"In the Capitolo di S. Antonio, at Padua, there

are three frescoes by Titian. The subject of the first is 'St. Anthony proving to a jealous Husband his Wife's innocence.' The effect of this picture is unsatisfactory; but on examination it appeared that the only pure parts are the heads of the lady and her female attendants, and some other more trifling portions: all the rest has been repainted, apparently in oil. The female heads are very fine in expression; and with regard to the mode of painting, the lights are loaded, the shades quite transparent, and the whole mechanical treatment is that of oil-painting.

"St. Anthony restoring a Criminal at the Intercession of his Mother.' This painting is in more perfect preservation; the landscape background only seems restored. Titian painted in fresco in a very sketchy manner, and, as has been remarked, with great rapidity, this picture having occupied a few days only. The drawing is careless, especially that of the extremities; the draperies are painted in a very slight manner, and the general effect of the picture is not striking. These frescoes look like ineffective works in oil. In these examples Titian has attained little beyond harmonious colour. Every part of these works is painted in a thin manner, the lights excepted. In the body of the youth he has availed himself of the colour of the intonaco in the half tints, the shadows being laid in with brown. Near this work there is another fresco by Titian, which, however, is in a very ruined state.

##### PORDENONE.

"There are some frescoes by this artist in the church of S. Rocco at Venice. Those behind the altar are remarkable for a washily slovenly appearance; the plaster is quite uneven, and the joinings are clumsily managed. Nothing can exceed the indifference which the Venetian artists have shown to such matters of practical detail. On one side of the nave there is a picture in oil, to which Pordenone has made an addition on each side in fresco. He has succeeded perfectly in so harmonizing the parts in fresco with the work in oil, that it is difficult to detect the difference: but on examination it may be observed that lakes are used in the oil-painting, whilst the reds in the fresco portions are earths only.

"The most interesting pictures in Piacenza are those by Pordenone in Sta. Maria in Campagna. On entering the church, immediately on the right hand there is a fresco representing one of the fathers of the church with infant angels around him. This picture would have been in perfect preservation had it not been wantonly injured, much of the lower part having been scraped off the wall. The flesh of the infant angels is painted with a luminous tint, and with a cool pearly tone in the shadows, and has been subsequently finished with a warm glazing; the result in this particular picture is a clearness, brilliancy, and pearly quality, which probably never has been excelled by any master of any school. The taste displayed in the drawing is like that of Correggio, but with more correctness; all the heads are excellent, and that of the father and the cherub to his right, are particularly remarkable. Fine in design, and exquisite in colour, this fresco may be ranked amongst the first productions of painting.

"The great dome of the church, the spandrels and soffits of the arches underneath, two smaller domes of side chapels, various pilasters, lunettes, and three great wall spaces are painted by the same masterly hand. In these works, force of colour is carried as far as seems possible; and in that in the chapel of St. Catherine the success with which the aerial perspective is maintained, whilst bright and hot colours are used in the distance, is surprising. The forms are noble and finely designed, and some of the female figures are strikingly graceful and beautiful.

"The effect of colour is, in a great measure, produced by Pordenone's remarkable glazing process, whatever that was. There is a full body of colour underneath, in which the marks of the brush are seen, leaving deep furrows: over all, a quantity of warm glazing is laid on most unsparingly; it may be seen filling the markings of the brush; and the articulations of the fingers and the nails are made out with it in hands which are drawn with the vigour of a Buonarroti.

"In some parts of the draperies this glazing is partially removed, and, if I was not misled by the present state of the pictures, these parts have been painted flat with the local tint, the shadows being

merely indicated with a somewhat darker shade of the same hue, and the whole has then been completed with powerful glazing.

"This mode of painting stands quite as well as fresco; but it is to be remarked that these pictures, with the exception of the first mentioned, in which there happens to be much naked flesh, have not the luminous quality of fresco, and cannot be viewed as successful applications of painting to architecture.

#### PAUL VERONESE.

"The frescoes by this artist in the church of St. Sebastian in Venice are entirely obliterated by damp, and those in the Ducal Palace have faded so as to be nearly invisible; those at Castelfranco have also faded greatly, and Paul Veronese is the only artist whose frescoes have sometimes decayed in so remarkable a manner; but in the Villa Maser, near Biadine, he has left works which excel in some respects his paintings in oil (or apparently in oil, for it may be suspected that many, if not most of his pictures, are in distemper), and place him in a high position as a fresco painter. The Villa Maser was built from designs by Palladio, and was once the habitation and property of Mannini, the last of the Venetian doges; it is now the property of Signor Colferai. In this villa there are eight rooms painted by Paul Veronese in fresco. These paintings are in perfect preservation, one only being a little injured by damp, which has accidentally penetrated through a broken tile. The greatest care has been taken in the construction of the arched ceilings, which are composed of centerings 13½ inches deep by 2 inches, in two thicknesses, to the under side of which are nailed laths of poplar 3 inches by 1 inch, and on these the plaster is laid (see fig. 7), the interstices between giving an excellent key to the lime; the upper side is also carefully plastered, and the whole has a boarded flooring over, a precaution evidently against the risk of people passing over the ceilings; the roof is carefully constructed with tiles laid under the usual roof tiles, and at right angles to the timbers, as before described.

"The qualities in colour, which are common in Paul Veronese's oil pictures, are exhibited in these frescoes, and in some parts with even superior brilliancy. The works are chiefly distinguished by great clearness of effect, but are too slightly executed; the draperies may be said to be washed in rather than painted; still there is great mastery in the manipulation. The heads are very carefully executed, and parts of the flesh may be said to be perfectly painted; the extremities, as usual with this artist, are indifferently treated. There is much loading in the lights, and a little hatching in parts, but freely and effectively introduced where he thought it might have an advantageous effect, unlike other frescoes by Pellegrini in the same building, which are disagreeably hatched all over, as if he could not manage his materials.

"In the arrangement of these frescoes much bad taste has been exhibited by the artist: he has not at all considered architectural propriety of design, but in other respects these remarkable works are worthy of attentive study.

"The usual fresco colours have been used, with one exception, viz., a bright yellow, like crome, which has turned quite black in the high lights, although it has not changed where there is less lime in it. The blue has come off entirely in some parts, and has evidently been laid on when the figures were finished and the lime too dry, so that, not being incorporated, it has come off in powder; in other parts, where the artist has evidently been obliged to use it first, it is perfectly preserved.

"There are some remarkable landscapes by Paul Veronese in fresco in this villa, in which much ability is shown: in these and in the backgrounds of the other paintings the most poetical effects are produced; a play of light and shadow, finely toned clouds, rainbows, and rays of light are introduced with successful mastery, exhibiting, in a varied and remarkable degree, the powers of fresco.

#### GIROLAMO DA' LIBRI.

"At Verona there is a fine fresco by this artist on the wall of a house. It appears that his subject required much red in the dresses of the figures, and in painting the Madonna in the centre, he has departed from prescriptive custom, and has made her garment yellow instead of red; her mantle seems to be black, but may originally have been a deep blue.

#### TINTORETTO.

"There are some frescoes on the ceiling of the 'Sala delle Quattro Porte,' in the Ducal Palace at Venice, by this artist; they are remarkable for richness and depth of colour, and are well preserved.

#### LUINI.

"In the Brera, at Milan, there are a number of frescoes by different Lombard masters, some on the walls, which have been sawn from their places, and others which have been transferred to panel. The most important of these frescoes are those by Luini, which are of a very fine quality. They are, generally speaking, painted thinly and with great freedom; but although there is evidence of his having painted with great rapidity, he displays great mastery in drawing. There is much less labour than in his oil pictures, but still to these last the frescoes bear a general resemblance. The backgrounds are mostly light, although in some paintings he has relieved the figures upon dark grounds; but there is no attempt to gain depth, which was evidently the object of the Venetian painters; on the contrary, Luini has gone into the opposite extreme in several of his works; in others, however, there is much power, attained perhaps on a better principle than in the frescoes of Titian and others of the Venetian school; there is no confusion of tones, but that distinctness which is essential to the effect of frescoes is preserved. The execution is light and graceful, quite unlike that of the present German school, which is comparatively laboured and heavy.

"It is evident that Luini painted in fresco with great rapidity, executing more indeed than an entire figure, the size of life, in one day, and he certainly did not prepare cartoons, at least not for his small works. The painting may be compared to that of Rubens; it is juicy, transparent, and clear. There are, also, portions which resemble the execution of the antique decorative paintings seen in Pompeii and elsewhere. Thus, outlines are often strongly indicated with some dark warm colour; hatching is occasionally used, and dark touches in the shadows are put in freely. Richness is attained by transparency. The drapery in a picture of St. Anna is red, and is transparent in the lights; although white is evidently mixed with it, yet a glazed appearance is given; the shadows are of the same red, laid on thickly, and no other colours are used in the darkest parts, merely the red in its pure state (this was the system of the early masters); breadth and a dignified repose are the result. The landscape backgrounds are like the hasty sketches which an artist sometimes makes in water-colour from nature.

"There is very little blue in these pictures; the skies are whitish and warm, with a mere indication of blue in some parts.

"In S. Maurizio, in Milan, there are a number of frescoes by Luini; many of them are in his finest manner, and in some he rivals Titian in power and harmony of colouring, whilst he surpasses him in purity of design. This great artist unquestionably exhibits far higher powers in fresco than in oil; in fresco he is noble, dignified, and free, and has displayed a conception of beauty in his female heads that perhaps never has been surpassed by any other artist.

"The frescoes in S. Maurizio would have been in fine order had it not been for the barbarous hand of man: the blues have been scraped off for the value of the ultramarine, and so has the gold with which parts were touched.

"At Saronno, near Milan, are also some fine frescoes by Luini; his best works are said to be at Lugano.

#### GUERCINO.

"In the cathedral at Piacenza are some admirable frescoes by this artist. He gives at all times too picturesque a character to his subjects to attain much elevation, but here he has, to a certain extent, risen above this; he appears, as usual, a great master of light and shade, is powerful in his tones and delicate in his reflected lights, and in these qualities he is as perfect in fresco as in oil-painting.

#### RAZZI.

"In the gallery at Siena is preserved the remarkable fresco of 'Christ tied to the Column,' painted by Razzi. This artist, like many others, seems to have prepared no cartoons, but has indicated his subject on the wet intonaco at once with a few lines, trusting to his mastery with the

brush. In the picture in question the head, although carelessly outlined in the first place, is painted with the most touching expression of grief and suffering; the body, which has hardly been drawn in at all, is finely executed, and is soft, fleshy, and true to nature. The artist seems to have painted with a considerable body of colour; the lights are pure flesh-tints, the half-tints are of that greenish hue seen in Siene pictures; the shadows of a warmish tone; the whole figure has been painted in one day, and after laying it in, in the manner above described, he appears to have glazed the whole with 'terra rossa' (the plaster still being wet), thus giving richness and warmth, using more or less colour as appeared necessary, and varying his touch to suit his forms. He appears also, in finishing, to have strengthened his outline in parts with a warm brown, and to have thrown in a little of the same colour into the darker part of his shadows to give clearness to his reflected lights. By this system of painting he succeeded in obtaining richness, warmth, clearness. The drawing of Razzi has been criticised, yet it is often very beautiful, full, and graceful, and his frequent failures must rather be attributed to his careless impatience than to incapacity. He almost ranks with Raffaele and Luini in his representation of female beauty; this is shown in his St. Catherine, in S. Domenico at Siena. Whilst he has left some fine works, he has also left some very indifferent ones, of which class those in the Farnesina at Rome are examples.

#### BECCAFUMI.

"There are some frescoes by this artist in a hall of the Palazzo della Republica in Siena, which, although in a bad, mannered style, must be mentioned as instances of the softness which may be attained in fresco.

"Further observations on the works of the great masters who have painted in fresco would swell these notes to unreasonable length. I have been induced to select the works of the artists whom I have mentioned, as in them qualities are exemplified which in England have apparently been deemed incompatible with fresco.

"A brief description of the ornamental frescoes in the loggia of the Vatican may be here added as illustrating the mode of conducting works of this description.

"The Cavaliere Agricola obligingly showed me some pieces of plaster that had fallen down in the upper loggia of the Vatican, originally painted by Giovanni da Udine, and lately restored.

"The coats of mortar have been before described (see p. 23). On this preparation the ornaments were partly painted in fresco and partly in distemper, or in 'fresco-secco'; the dust used in pouncing is distinctly seen attached to the intonaco, which proves that it was wet when the pouncing took place. A number of hands must have been employed, and the division of labour and contrivances to paint fast are apparent from various circumstances.

"In small panels with arabesques upon them, the tint of the ground was first laid in, in fresco, and then the ornaments were painted over this in distemper, and no other process could be adopted; it is manifestly impossible to paint delicate ornaments on a coloured ground in fresco. The bunches of fruit and flowers at the sides of the windows were carried as far as possible in fresco; the joinings going right across at regular intervals are distinctly visible: first the ground was laid in red, then the fruit, &c., painted, and the blue background was subsequently added.

"In drawing in these ornaments parts were pounced; parts, as has already been stated, were pricked; some parts were put in with the stylus with a cartoon; and the geometrical lines of architectural ornaments were ruled in without the cartoon being interposed; these lines prove that the paintings were, at all events, begun in fresco, and the joinings in the pilasters show this also; it likewise appears that each pilaster occupied seven days in painting.

"That lime with marble dust does not make a good intonaco is proved by these works; the paint in many places has fallen off entirely. The part where it has been being rougher than the surrounding white plaster, the effect now is like that of damask. An intonaco of this kind sets too fast, but the whole preparation has evidently been made to imitate that in the Baths of Titus, which it precisely resembles; the arabesques have, in like man-

ner, manifestly been painted so as to imitate, as closely as possible, the loaded painting of the ancients, and these arabesques tend to prove that the old paintings of the same kind were not in any respect frescoes.

#### EFFECT OF STAINED GLASS ON PAINTINGS.

"A few facts and observations connected with the employment of stained glass in rooms with paintings in them may not be unimportant, as an opinion has been expressed that windows coloured in any degree are incompatible with paintings in rooms so lighted. It rather appears, however, from many instances, that stained glass may be sometimes so employed with great advantage; and that the excess of light may be thus subdued or otherwise modified so as to produce the most pleasing effect.

"In the cathedral at Munich the windows are coloured to a certain height, and although the effect is far from pleasing considered in itself, yet it is very useful as regards the pictures in the church, as the light is brought in from above in an advantageous manner.

"At Saronno, near Milan, there are two small frescoes by Luini, with a coloured circular window between. The pictures are lighted by a window on one side, and could not be seen at all but for the exclusion of white light by the coloured glass in the centre window. In S. Patrizio, at Bologna, there is an altar-piece under a window filled with richly stained glass; the picture is well lighted from an opposite window, but if the window over it had been of white glass, it would have been impossible to see the picture, which is very dark. The sun happened to shine through the rich hues of the window above, and I observed here, as I had previously remarked at Saronno, that the picture did not suffer in consequence.

"At Assisi, in the upper church, all the windows (one excepted, over the door,) are coloured, but in those which are painted, much of the glass is left white; the light is weak in this church, and it is thus apparent that it does not always answer to tint all the windows, even although pure light is partially admitted; but, where the light is sufficient, every window in a room with paintings may have a certain proportion of stained glass in it, provided pure light be not altogether excluded. It may be objected that coloured rays will be thrown on the frescoes when the sun shines; but white rays are quite as objectionable, and besides, frescoes never should be placed where the sun can shine upon them, as, like other pictures, they fade sooner or later under its influence; coloured glass in such a case might be an advantage, and the inconvenience from the coloured rays would be temporary.\*

#### FRESCO-SECCO.

"Certain processes of painting allied to fresco having been referred to in the foregoing statement, it may be desirable to add a brief account of them.

"The early mural pictures, although commenced in fresco, were, as before observed, usually finished in distemper, and the vehicle employed was a mixture of yolk of egg and vinegar. This mode of painting was adopted also on panel and on canvas; and it is probable that many Venetian pictures, supposed to be entirely in oil, were painted in this manner, and then glazed and finished with oil colour.

"There can be no doubt of the durability of this mode of painting on walls, as there are many well-preserved examples of it by the early masters; but I am unable to quote any instance of the successful adoption of the process in modern times. Professor Overbeck informed me that he painted in this manner at Assisi, but that it was necessary to lay a ground of whiting on the wall in the first place—a process which is manifestly objectionable, and not in accordance with ancient practice.†

"An Italian artist informed me that it is necessary first to give the wall a coat of strong size, and then to give it a second coat mixed with the yolk of egg and vinegar.

\* The example of stained glass in the windows which originally lighted Raffaele's frescoes in the Vatican has been before referred to (First Report, p. 20, note). In the church of St. Vincent de Paul at Paris, now approaching its completion, the windows which will throw light on the paintings are to be partially coloured; the other windows are to be entirely coloured.

† See the First Report, p. 33, note 4.

"Another mode of painting, of which there appear to be a few early examples, and of which there are many later ones, is called by the Italians fresco-secco. I was informed that a large painting by Orgagna, in the church of Sta. Maria Novella, is in fresco-secco. I examined it, but hesitate to pronounce an opinion.

"The later masters painted extensive works in this manner: the ceiling of the great hall in the Barberini Palace in Rome appears to me to be in fresco-secco; and in Rome, Florence, and Genoa, the ceilings of most of the palaces are covered with paintings executed in this manner; it is the mode of painting still adopted in Italy for nearly all decorative purposes, is easy of execution, and unquestionably durable, whilst it is certainly the most economical process which can be followed.

"Fresco-secco has been practised for some time in Munich: the ceilings of corridors and loggias and those of staircases, are thus painted in the palace; and the Chevalier Von Klenze, who first introduced the process at Munich, is satisfied with the experiments which have been there made with it.

"The following is a description of the method. The plastering of the wall having been completed, and lime and sand only having been used for the last coat, the whole is allowed to dry thoroughly. When a wall is intended to be painted, the surface of the lime is rubbed with pumice-stone, and on the evening of the day preceding that on which the painting is to be commenced, the plaster is thoroughly washed with water, with which a little lime has been mixed. The wall is again wetted next morning, and then the cartoons are fastened up and the outline is pounced. The artist then begins to paint. The colours are the same as those used in fresco-buono,\* and are mixed with water in the same way, lime being used for the white.

"If the wall should become too dry, a syringe, having many fine holes at the end, is used to wet it. Work done in this way will bear to be washed as well as real fresco, and is as durable: for ornament it is a better method than real fresco, as in the latter art it is quite impossible to make the joinings at outlines, owing to the complicated forms of ornaments; on this account walls thus decorated in real fresco present an unsatisfactory appearance. The joinings are particularly observable in the loggia of the Vatican.

"Painting in fresco-secco can be quitted and resumed at any point. The artist need not rigidly calculate his day's work, and can always keep the plaster in a good state for working on. But whilst it offers these advantages, and is particularly useful where mere ornamental painting is alone contemplated, it is in every important respect an inferior art to real fresco. Paintings executed in this mode are ever heavy and opaque, whereas fresco is light and transparent. Fresco-secco has been chiefly adopted by late and inferior masters, and none of the works executed in this manner are of great reputation. The early pictures which are designated by the Italians as works in fresco-secco, are not probably executed in this manner. The method may have been adopted in repainting parts, and this may have led to the idea that entire works were thus executed.

"Fresco-secco is extensively used in Italy at present, and with great success: the chiaro-scuro decorations executed in this manner are excellent; but I found that at Milan, where I had an opportunity of examining some specimens, it did not bear washing like the Munich process. The method seemed the same, but the result differed in this respect, and I had no opportunity of seeing the actual process of paintings executed in this mode in any other part of Italy.

"At Genoa, where the paintings in the churches and palaces have no claim to be called frescoes, although generally so described, a compound process has been followed in their execution. They were all commenced, or partly commenced, in fresco, but were finished in distemper, and size has been used for mixing the colours, as they can easily be removed by washing. The object of the Genoese artists has been to supply the fancied deficiencies of fresco-painting in point of colour; but, although they have succeeded in making use of vermilion, brilliant green, and bright yellow,

\* Fresco-buono, or buon-fresco, is the ordinary term for the regular process as opposed to fresco-secco.

they have not produced satisfactory works of Art. The paintings are gairish, and out of harmony; the colours subsequently added in distemper do not harmonize with those previously used in fresco, and the general effect is totally devoid of that transparency which is distinctive of good fresco-painting. The Genoese have brought fresco down to the level of mere size-painting; and the works which they have left are proofs of the danger of carrying the practice of retouching too far.

"In the Doria Palace instances occur in which it may be observed that the entire picture was not prepared in fresco and then retouched in distemper, but that portions were painted in fresco, and then, the plaster being allowed to dry, the remaining portions, not previously touched when wet, were begun and finished in distemper. Pierino del Vaga, or perhaps Pordenone, who painted in the same palace, may have introduced this practice as well as others equally objectionable.

"CHARLES H. WILSON."

#### THE NOMENCLATURE OF PICTORIAL ART.

##### PART III.—FINISH.

SIR,—There is no one quality amongst the many constituents of a fine picture so generally misunderstood and unappreciated as finish. The reason may be, that what consumes most time, exerts most intellect, and on which is devoted most labour, is not apparent or superficial. These are pure, expressive, and compact invention, as to the admissibility of objects absolutely necessary to the development of an incident; their most appropriate and pictorial arrangement, their expression individually, and the augmentation of the general expression of the subject itself by means of colour and chiaro-scuro, completed by a characteristic manipulation, and appropriate adaptation of manner.

These things are overlooked and unappreciated by the public, who more than ever are the arbiters in matters of Art, and judge of the consummate completion of a work superficially rather than by way of analysis; a much easier path to tread, though an erroneous one in forming an estimate of things requiring intellect in their production; and more satisfactory to those who enjoy, than to those who create them.

The painter and true connoisseur, however, have quite another mode of looking at and judging of things common to Art, and of concluding as to what degree of finish to assign them.

The public, for instance, in examining a number of figures in outline, would, perhaps, assign the greatest finish to the one which may be bounded by the finest, most even, and smooth line; while the connoisseur would be entirely guided by the extreme purity of form, appropriateness of expression, flexible and easy movement, and grand and natural impulse and action, notwithstanding, perhaps, the outline may have some ruggedness and asperity in its execution. Such a figure may have consumed a month in its finish, and the one chosen by the public a morning.

As regards a finished work, the public would again most likely assign the quality of finish to one conducted upon very different principles than would regulate the decision of a connoisseur or artist; and it may not at first sight appear to be very wide of a correct opinion, to assign the greatest finish to that work, amongst others, which should either display the greatest number of touches upon a given space, or that extreme smoothness, on the contrary, which creates an impression of the greatest care and elaboration.

These two states of the surface of a picture, indeed, are more than any others prized by those persons who, knowing nothing or little of the true objects or resources of Art, are very naturally prone to consider it—with jewellery—a production for merely ornamental purposes, and to give the preference to works which may present the greatest display of qualities easily achievable by boys, to the neglect of others, rarely, and never but with difficulty, realized by the veterans in Art.

The term *detail* would, by artists, be more generally given to that minute manipulation which the public consider finish; for it is evident that a picture may be very highly detailed, and still (speaking of figures) want matured invention, appropriate composition, pure and characteristic

form, just expression, and naturally impulsive action; besides many of the higher technical qualities, without which many of the first-named may remain unappreciated. Finish requires brains of a high intellectual order and cultivation; detail may be managed by hands and eyes alone.

If by finish is meant completeness (of which detail must be considered a technical portion only), anything immature, crude, and incomplete, from the outline to the consummation of the pictorial whole, must be allowed unfinished, notwithstanding it have the detail of the inimitable Dow, or his metallic and repulsive rival Miens; and it will not, I think, be advancing more than many will at once feel inclined to allow, to say, that some outlines may have more finish, completeness, and perfect meaning and expression, than some pictures upon which may have been lavished a distressing and confused amount of detail.

Correct tone, aerial phenomena, with light and shade, may be considered the *passive*, while detail may claim to be the *active*, state of finish; but it is necessary to guard against the danger of suppressing the superior beauties of the first three, by unduly cultivating the latter.

It must be borne in mind that the first three qualities, while they are extremely difficult of achievement, are chiefly, if not solely, instrumental in realizing all the expression and fine passion and feeling of which the highest grade of landscape is susceptible, and over which the first landscape painters have been so emulous to obtain a mastery, some even to very nearly an exclusion of detail, which though essentially necessary in identifying objects, has always been found, in a great measure, subversive of those elevated impressions which are at once the great object and stamp of a superior mind.

Detail may be considered the orthography of Art, and its vocabulary; may it not have also its tautology? If so, an over-detailed object or passage may be called a piece of pictorial tautology, and capable of receiving improvement by being pruned and purified of its exuberant touches; thus adding finish or completeness by extracting detail, as a piece of writing may be made more finished by striking out the useless verbiage. If the value of a book be measured by the number of ideas, rather than the number of words, I see no tangible reason why a picture should not have its merits tested rather by the number of its impressions than that of its touches. And I think it is impossible to resist the conviction that one touch of the pencil more than may be necessary to realize the identity of any object, is not less an unnecessary and irritating intrusion on the attention of the spectator, than a mark of either weakness, immaturity, bad taste, or caprice in the painter; and in the same proportion as the subject becomes elevated in character, the more must this be felt. The works of the greatest painters, and their high and increasing estimation by the true connoisseur, prove this.

The detail of Claude, careful as it is, has been transcended by innumerable inferior painters, but they have never equalled this prince of landscape painters in general and accomplished finish. They have stopped where Claude had started; and while he left them grovelling amongst docks and toadstools, or labouring amongst the intricacies of trees with their stems and leaf-stalks, he soared into the regions of pure air, and floated with an easy and graceful wing over immeasurable distances, and brought down the golden effulgence of heaven on the sunny breasts of the far-off pastoral islands; creating pictorial banquets for the minds of princes and nobles, while his cold and passionless rivals were serving up sour and raw feasts for the future cannibal picture dealer, and his unwary collector.

The dealer, however, of 1843, with his patron, know well how to distinguish between the superficially detailed and the accomplished work, and proves his estimation of high works by according to them high praise with high prices; and if a painter of promise place his light under a bushel, the dealer soon exposes it in the galleries of the great. He unlocks the studio of the most retired, and the connoisseur thinks himself fortunate if he get there before him.

There is, however, in some painters, a nice discrimination and appropriateness in the quantity of detail, which adjusts itself with a felicitous precision to the highest as well as the lowest subject.

Amongst them are Raffaele, in the grand style of history; and at the other extreme, Dow in the low familiar: their manners are as dissimilar as they are appropriate to the subjects of either master. They evidently did not paint at the public for an income, but from an intense and natural feeling for their different branches of Art; and their constant and unerring sense of the proper—their true genius—threw them, involuntarily, upon the most appropriate mode of consummating their different styles.

In grand landscape, we have Nicolo Poussin, and next below him, Gaspar. In the beautiful, or middle style, Claude stands by himself; the rich, and approaching a sensual style, falls to the share of Cuyp; and the low, to Hobbima and Ruysdael.

The works, again, of these six men—their finest works—bear the indubitable stamp of a distinct and generic dissimilarity, resulting from the same causes, and originating an appropriateness of sentiment to subject, through the means of just manner, which has placed them for ever upon the map of Art as great landmarks for future pictorial geographers.

The touch of Nicolo Poussin, for instance, has a fine determination; the general execution and finish are of a character that would be the destruction of any work not conceived in the sublimest truth. The tone of some of his landscapes creates a sensation of terror, and approaches the sublime nearer than the martyrdoms and massacres of many other fine painters.

If Gaspar did not equal him in this respect, his productions are nevertheless of the most manly character, full of the finest passages of the savage and melancholy pastoral, and sustained by an execution conceived in the utmost propriety. Those who sigh for more detail, have only to look at the works of his unfortunate imitators, who, by adding more leaves, fancied they were augmenting, while really debasing, the interest of the same fine scenes.

The style of Claude is essentially that of the beautiful; it stands nicely adjusted between the terrible or sublime, and the low or pretty, and is as far removed from the lofty conceptions of Nicolo Poussin as the manipulative dexterities of Ruysdael, and his innumerable fry of imitators, whose stitched and stippled styles of execution are as irritant to the eye as to common sense and pure taste.

Cuyp again, in his own peculiarly rich and luscious style, takes a distinct position, and has, up to the present time, kept it "against all comers." He is, however, trenched upon closely—on one side by Bosh, in his broad and best works, and by Wilson on the other: but the first falls short of that firmness and gelatinous impasto, the peculiar and ravishing charm of the bland Dutchman; and Wilson, while his works want that perfect feeling for composition discernable in all those of Cuyp, has failed in the complication and richness of texture, which would be as appropriate an embellishment to the subjects of one as the other. Perhaps the peculiar charm of Cuyp's works is the result of a nicely-discriminated subordination of all their qualities, and principally detail, to one principal and absorbing sentiment—that one sentiment of a rich repose.

Their horizons, for instance, are low, sometimes creating an impression of not only ranging along rich meadows or broad river-banks, but that the spectator must be in the enjoyment of a reclining, or even lying, position. The objects, introduced by this means assume a majestic elevation; and, instead of struggling for importance amongst detailed passages of equal consideration with themselves, are thrown against broad skies, and lifted above all surrounding influences. The air is generally still, and suffused with a dreamy richness; and a glow, which at once is felt not to be a matter of mere surface, but of width, breadth, and depth, far into, but through which you cannot see, pervading everything, it pervades yourself, and no inclination is felt but to prolong the soothing pleasure of basking in his rich sunshine, and, watching the passing sail, glide into the depth of his mysterious haze.

In these pictures the finish is perfect—consummate; the detail undiscernible until searched for; the textures solid and rich; and the air, instead of a thin curtain of colour, a perfect cube, in which every object has assigned it a distinct place.

Hobbima and Ruysdael (though practising the same style—that of low pastoral—and without

embellishing it with any of the more exciting phenomena of nature) have raised it above the ordinary level by the consummate propriety of their finish. Their lanes and village scenes and woody glades have all the simple quiet which, more than any other quality, are natural to them. They all display, and that in an extraordinary degree, that feeling and sentiment which one at once feels to be proper and *probable* rather than barely *possible* to them, and the result is natural and correct impression. Thus having their whole mind and purpose bent upon giving the general rather than particular, they have neither of them, in any picture I can recollect, ever been betrayed into that ornamental flourish and dexterity of execution by which other painters have endeavoured to give an extra and false impression to scenes improper for their reception. The finish in the pictures of these masters is also complete, to which the detail is subordinate, although carried to a great extent, particularly by Ruysdael.

In the works of these six great masters of nature neither the materials of the palette nor the mode of using them stare you in the face. They would seem never to have had them in view themselves. The subjects and the modes of treating them seem to have grown up side by side, and the executive portion to be the spontaneous production of the two.

It is a saying in some circles, "Beware of the man of one book," as indicating the unity of purpose of the individual. Artists may very properly exclaim, "Beware of the painter of one style." The chances certainly are two to one that he will make double the progress to the painter of two.

In looking again at the works of the men who have been just canvassed, it would certainly appear that they were individually painters of one style. Their daily work was in accordance with the impression of their whole lives. They were not turned from their course by the breath of every new patron that appeared; nor did they take harlequin leaps from one mode to another, according as gay or solemn, detailed or broad, finish was at a premium in the market of Art. They held on, some steadily and some majestically, in their different courses, working out eminence through their own strong feelings, by their own strong purpose.

I am, your obedient servant,  
Walham-green, Fulham. J. B. PYNE.

## RECENT AND LIVING FOREIGN ARTISTS.

### No. IV.—SCHWANTHALER.

WHILE among ourselves sculpture has as yet but a very limited field, being chiefly confined to portrait-statuary, and to monuments—in the popular meaning of the term, rarely entering to any extent into architectural design as a characteristic element of it—the plastic art has, of late years, received great encouragement in Germany, where it has had opportunities of exercising itself in heroic and epic compositions of considerable magnitude, and thereby elevating itself into a more poetic sphere. It is true such direction may seem to many in this country to be, if not altogether false, more reprehensible than praiseworthy, inasmuch as it leads to the adoption of pagan ideas with pagan forms; and, instead of springing from amidst popular traditions, feelings, and sympathies, inspiration must be sought in classical myths and legends of an antiquity which we cannot in any way recognise as belonging to ourselves even by tradition.

Without attempting now to discuss that point, albeit of considerable interest just now, when Paganism and Christianity are regarded by many as antagonistic principles in Art, we may remark that, of the two, the pagan or classical accommodates itself more readily to plastic composition, though no doubt in a great measure because the artist finds a very great deal already established and prepared for him, and has rather to select and recombine than to invent and create. Be all this as it may, certain it is that not a few of the living artists of Germany, whether sculptors or painters, are ultra-Hellenic in taste, if not exactly exclusively so: nor is Schwanthaler, one of the most eminent among the former, the least so of all.

Ludwig Michael Schwanthaler, the youngest son of a family of sculptors at Ried, in the Inn district of Tyrol, was born at Munich, August 26,

1802, where it seems his father, Franz Schwanthaler, had settled in his profession, and he died there in 1821, with some reputation for talent and taste. As has been recorded by way of wonder of a great many other embryo artists, he attempted the "first" style of Art, in his urchin days, modelling or sketching—perhaps scrawling, all sorts of little figures and groups, battle-pieces not forgotten. This precocious dilettanteism was not, however, suffered to interrupt his school studies, which were of a kind to prepare him for his future career as an artist, by initiating him into classical lore. At the age of sixteen he determined upon following the hereditary profession of sculpture, and was accordingly placed in the Academy, but was so far from receiving any encouragement from its then director, Langer, as to be considered by him the reverse of "bright;" on which account he did not attend there very diligently, preferring to pursue his studies at home. Nor was it very long before the death of his father compelled him to take upon himself the charge of carrying on his "concern" in order to support the family. He appears, however, to have done so with success, for in 1824 he received a commission from the then King, Maximilian, to model a *plateau* for a dinner service. This work, consisting of a series of bas-reliefs, extending altogether upwards of a hundred feet in length, afforded him an opportunity of displaying his fertility of invention, his knowledge of antiquity, and his technical skill, in a succession of groups from Grecian fable, setting forth the story of Prometheus, and that of the Titans. After this he resided for a while at Rome, where he improved himself under Thorwaldsen; and on his return to Munich established an *atelier* of his own, and subsequently became teacher of sculpture at the Academy. Among his earlier works of this period are the two Homeric bas-reliefs in the Trojan Hall of the Glyptothek, a favourite class of compositions with him, and the one wherein he has displayed both a master-mind and a master-hand; more especially in the magnificent frieze executed for a banqueting-room in Prince Maximilian's palace, representing the exploits and apotheosis of Bacchus, a work of which it has been said, that it would suffice for the apotheosis of its author. To that extensive piece of sculpture, whose total length amounts to not less than 150 feet, may be added the frieze in one of the upper apartments of the Neue Residenz. In this last, which is nearly of the same dimensions as the other, he has taken for his subject the history of Aphrodite, or the Grecian Venus. Though executed by other artists, many of the frescoes and encaustics in that palace are after his compositions—namely, the different series of subjects from the Greek poets, Orpheus, Hesiod, Pindar, Æschylus, Sophocles, and Aristophanes, which, taken collectively, manifest an astonishing prodigality of ideas, and energy of imagination—almost a mind saturated with the spirit of antique feeling and conceptions; which last remark may seem to many to carry with it more of reproach than encomium. There are those who represent artistic and poetic enthusiasm for the antique, as being essentially *Pagan* in feeling; and so it may be in some minds, yet assuredly not in all; at least we can oppose to such opinion a very strong instance to the contrary, no less a one than that of the most Christian of our English poets, the author of the "Task," who devoted years of loving labour to his translation of Homer, the father not of Greek poetry alone, but almost of Greek mythology also. The eminent antiquary, Visconti, affords another proof that the paganism of the imagination may exist without any paganism of the heart; and it would be well if the same could not be said of Christian ideas—we had nearly said mythology—also. We are now, however, treading upon dangerous and disputable ground—to the very great danger of exciting the *odium theologicum* of many at the present day against us.

Let us, therefore, return at once to Schwanthaler, and, by way of showing that he is not exclusively pagan as an artist, we may mention his cartoons for the figures of the Saviour and four Evangelists, and SS. Peter and Paul, for the Ludwig's-kirche at Munich. Still he is most at home in classical and heroic subjects; and these are astonishing merely on account of their number alone, when it is considered that, though many of them are of colossal dimensions, they are the labour of only twenty years, including

those already mentioned. Of the rest we do not pretend to give an exact list, or one strictly chronological, but may here enumerate the following:—twelve equestrian figures, and an extensive bas-relief for the new riding-house of the Prince of Thurn and Taxis at Regensburg; twenty-four statues of eminent artists for the exterior, and fourteen bas-reliefs for the interior of the Pinacothek at Munich; his statues for the Walhalla, consisting of fourteen colossal caryatic Valkyrie within that structure; fifteen other colossal figures for the south or front pediment, and as many more for the north one; eleven figures for the pediment of the new building at Munich for the exhibition of works of Art; the eight colossal statues on the colonnade of the Fest-bau, or north façade of the new palace; and for the interior of the same, a frieze, 200 feet in length, representing the achievements of the Emperor Frederick Barbarossa; also eighteen other reliefs for the portal and vestibule; and the twelve colossal statues (in gilt bronze) of Bavarian princes for the throne-room. In 1839 he completed the model of his 'Bavaria,' a colossal figure, since executed in bronze, on the stupendous scale of fifty-four feet in height, an achievement almost without parallel in modern Art; and, notwithstanding both their magnitude and their number, the productions above enumerated are very far from comprising all those which his unwearied diligence and prolific imagination have given to his country in every department of his art. Besides several busts for the Walhalla, he has executed not a few portrait-statues, among them those of the present King of Bavaria, the Grand-dukes of Hesse-Darmstadt and Baden, Jean Paul, Mozart, &c.; further, a series of compositions from the "Odyssey," for some of the apartments of the Fest-bau, and several statues for the new palace at Wiesbaden; and all this he had accomplished at a time of life when he may be considered only midway in his career!

#### BRITISH MUSEUM.

ALTHOUGH nothing has as yet resulted therefrom, this building has been made the topic of much discussion during the last month,—if, indeed, that can be called discussion which consists of unanimous complaint, reprobation, and a demand for the public exhibition of the model, forthwith. The *Spectator* has distinguished itself upon the occasion, amongst the journals of that class; for if it did not take a leading part at first, it has since made up for it, by making the "Façade of the British Museum" the topic of its Fine Arts article two successive weeks, and has recommended that a public meeting should be called, for the purpose of adopting further measures. We have since heard that something of the kind was actually in agitation, but question if there was any foundation for the rumour.

The least doubtful part of the matter is that Sir R. Smirke's talents are very differently estimated now from what they were some twenty years ago; and it seems to be universally agreed that what would have satisfied the public of that day would be deemed very unsatisfactory now,—more especially on so very important an occasion. Not any notice of all this, however, has been taken, either by the architect or the trustees of the Museum: they have neither complied with the demand that the model should be exhibited, nor assigned any valid reason, or any reason, for declining to do so. Hoping, perhaps, that the outcry against them may die away, and the storm blow over, they in the meanwhile seek shelter in silence: for they do not attempt to repel any of the reproaches hurled against them; nor has any one else come forward on their part, in order either to justify them, or to say that it is of comparatively little importance to the country, either one way or the other, what rank the Museum may obtain as a mere work of architecture.

To whatever it may be attributable, it certainly does not look particularly auspicious for the advancement of Art in this country that, at the very time we are felicitating ourselves on being on the eve of a new era in Art, arising out of the employment that will be afforded it in the Palace of Westminster, the very next opportunity that offers itself for achieving a noble monument of national Art, is to be suffered to dwindle into a mere job.

If not all, surely some of those who enrol themselves among the patrons of Art, and the guardians of its interests, must be at hand to interpose and avert the impending mischief, or at least to obtain a respite, until further consideration shall have been given to a matter of so great moment. On the other hand, those who are now precipitating the works at the Museum, with all possible expedition, may yet rue the taking such advantage of the supineness and dilatoriness of opponents. By resisting—at least contemptuously refusing to notice—the demand for the model's being publicly shown, they virtually take upon themselves the sole and entire responsibility for its excellence, consequently must expect to share with the architect in the disgrace attending failure. The motives of the latter's unwillingness to submit his design to the ordeal of public examination are at least plain and intelligible enough; but it is difficult to assign any for similar reluctance on the part of the rest, unless it be the *ris inertia* and sulky obstinacy of bodies of that kind.

After all, too, of what avail is such little-minded, jealous secrecy now when the design of the façade, and we may venture to say the very best part of it, has actually transpired. The plan which has been published officially, and may therefore be considered as authentic as the model itself, shows the number, arrangement, and size of the columns; and for all the rest we have only to look at the elevations of the inner quadrangle, which are most jejune, and bare in design, notwithstanding that the shafts of the columns are fluted, the utmost extent of decoration Sir Robert Smirke ever ventures upon. We are accordingly justified in condemning the design—model unseen.

The *Times* has at length taken up the subject of the British Museum, or, rather, has allowed correspondents to touch upon it briefly; whereas that journal might, if it so pleased, call general public attention to the matter as forcibly as it ought to be. One correspondent of the *Times* (Oct. 14) says that it is not too late even now for a competition, and suggests that the premiums should begin at £50, and rise up to £300. We think, however, that if a premium were to be the extent of remuneration, the actual execution of the work being still left to Sir Robert Smirke, there should be only a single premium, amounting to the entire sum allotted for such purpose, for the design most worthy of being adopted. Besides that a prize worth striving for would then be held forth, this would keep out of the field a great many who might else be content to run the chance of getting one of the minor premiums, although they might despair of anything more. Whether, in anticipation of any such competition, architects have been turning their thoughts to the subject, we know not, such things being usually kept *in petto*; but it is not altogether unlikely, and perhaps the next Exhibition at the Academy may show us some ideas for a "Grand National Museum."

#### THE INVENTOR OF LITHOTINT.

[IN consequence of our remarks on Mr. Hullmandel's "invention" of lithotint, we received some communications, which rendered it necessary that we should address him on the subject. The matter is one of very great importance to the history of Art, and it is most essential that the question as to the merit of the invention should be set at rest, so that it be given once and for ever to the person justly entitled to it. We have, therefore, thought it right to afford to Mr. Hullmandel all the space he required to make good his claim. The case may now be considered as finally settled, for hereafter we imagine this document will be referred to as conclusive. We may as well remark that Mr. Hullmandel submitted to us the originals of all the letters from which he has taken extracts, as well as a mass of others which merely support and bear out the testimony here given. To us the evidence thus brought together is convincing; but, indeed, it was scarcely necessary—the bare fact that so many years have passed without any claimant having appeared to assert a prior right to the invention would alone suffice to prove the right of Mr. Hullmandel. The high and honourable character which Mr. Hullmandel has so long sustained in this country may also be worth something in considering a question in which his integrity is at stake. No one has a reputation more entirely unsul-

lied. Something, too, may be allowed for the great abilities he possesses in many branches of knowledge—abilities which, chiefly concentrated upon lithography, have enabled him to bring that art very near to perfection in England. At all events we have merely done justice to Mr. Hallmandel in thus affording him an opportunity for self-defence.]

Sir,—You have informed me that, in consequence of an article which you had inserted in your valuable paper (the ART-UNION) on my invention of lithotint, you have received letters from persons either claiming the invention, or asserting that several plates have been produced, executed with the brush on stone, many years prior to those which I have put before the public since 1810. In consequence you call upon me to show on what grounds I assert my claims, and this I hope I shall be enabled to do in such a manner as to silence for ever my would-be rivals.

I must beg leave to observe, that nothing was more simple than the notion of using lithographic ink diluted with water, in order to execute drawings on stone, in the same manner that sepia, or Indian ink, is used on paper; and although there are certain difficulties to overcome in the use of the material, still very fair drawings can be made on stone with lithographic ink, which would be satisfactory enough if they had only to be framed and glazed; but when persons, having executed such drawings, attempted to print them, then commenced the real difficulties, amounting, apparently, to impossibility. I wish it, therefore, clearly to be understood that I lay no claim whatever to the execution of drawings with a brush, but to the possibility of printing drawings so executed.

Senefelder, the inventor of lithography, gives a mode of printing drawings done with a brush in the work which he published 28 years ago on lithographic printing; however, his process is so defective that it has never been put in practice; in fact, it is impracticable. That it is defective, is proved by the result obtained; this result is, that you get four or five tolerable impressions, and after that each runs blacker and blacker, until they are at last unfit to be seen. This is the sort of disaster which has attended all those who have hitherto attempted to solve the brush problem: only a very limited number of bearable impressions can be obtained, so limited, indeed, as to render such attempts useless.

Disgusted with repeated failures to obtain impressions from the legitimate drawing executed with a brush, it was abandoned as an impossibility. Whatever may be said, *now that the problem is solved*, the brush style was evidently considered, but three years back, a hopeless case. I am acquainted with all the first lithographic printers in Paris, and they have often expressed to me their sorrow that such an important process should be impossible. I know that for years the lithographic printers of London have tried unsuccessfully; I know that that eminent lithographic artist, Mr. L. Haghe, has repeatedly attempted to obtain it, but in vain, and I am sure that he will allow me to quote him thus publicly, as he, in an affidavit that he made in my favour in an action which I had to defend in Chancery concerning my patent, declares my process to be quite new.

I might also point to the great experience of Mr. Harding, an equal authority, who is well acquainted with the various processes of lithographic practice hitherto known, and perfectly aware of the value of obtaining impressions from a drawing made on stone with a brush, and who urged me continually to apply myself to the solution of the problem; and who, still better even than Mr. Haghe, is evidence, from our intimacy, how entirely the discovery is my own; nor can I let this opportunity pass of expressing how deeply I am obligated to Mr. Harding for having enabled me, through his kindness and patience, to bring this difficult process to perfection: the friendly perseverance with which he has supplied me with dozens (I may say) of able sketches on stone, often only to be spoiled much faster than they were executed, can never be forgotten by me. I need hardly observe to you that, had this great desideratum ever been obtained—whether here, or in France, or in Germany—it would, and must very soon have been made known to the world. In fact, plain good sense tells every one that *publicity* and the emission of good impressions from drawings so done are the only means of being remunerated for the time, trouble, and

endless researches and experiments necessary to obtain so desirable a process.

One cause of failure was, that almost all those who tried for the brush style thought that the secret was in the composition of the *inks*.

In Paris numerous artists tried; but, finding that none of the drawings executed with the brush would print, they attempted to obtain a similar result by roundabout means: thus, many subjects were done in imitation of washed drawings by tricks, such as using soft chalks, and rubbing down the tints with cork, bits of wood, hard brushes, steel brushes, flannel, &c.; but the use of these approximate means and succedaneums was so unartistic that the whole was soon dropped.

One drawing alone attracted at the time (1830) much notice in Paris: it was a drawing done by Deveria, called 'La Conversation Anglaise,' and printed by Motte: it was said that this drawing was done *entirely* with the brush, but this was not the case; many parts certainly show that they were done with the brush; still by far the greater portion was executed by the above-mentioned roundabout means: this much I know, that I was very intimate with Motte, who printed this drawing (he is since dead); that we have often spoken together of it, and he has often told me how elated he was about it, and thought that he had found the brush style; but he also told me that his temporary success must have proceeded from a fortunate combination of circumstances; for that, although Deveria and others had made repeated attempts since, *that stone alone ever gave a series of saleable impressions!*

M. Tudot, who has written an excellent treatise on Lithography, under the chapter headed, "Washing on Stone" (*laver sur pierre*), expresses himself thus:—"Many artists, not having the patience necessary to submit to the labour of producing chalk tints, have attempted to wash on stone; but numerous trials have proved that it was impossible to obtain so desirable a result." He proceeds, therefore, to give various means by rubbing, &c., as mentioned before, all of which have been since abandoned, because they are unsatisfactory and unartistic. A M. D'Orchvillers, amongst others, executed various drawings in imitation of brush drawings, but which, like the rest, are done by trickery: rubbing, scraping, cutting out forms with paper (as in stencilling), and rubbing in tints through the holes, &c. &c. Still all these are not brush drawings.

Another roundabout way to imitate brush drawings was invented by Engelman: this was done with dabbers charged with ink and struck on the stone, stopping out with gum, and thus producing a series of flat tints, similar to the aquatint style on metal; but none of these means are in use now.

To settle this question completely, I cannot do better than give an extract from a report made by M. Gauthier de Claubry to a meeting of the Society of Encouragement for National Industry in France, presided by the celebrated Count Chaptal:—

"Is there really such a thing as washed drawings in lithography, or can the delightful effects of the brush be produced by other means? The question appears answered by the efforts made by numerous artists of high merit to wash on stone. You must all recollect, gentlemen, the beautiful print which was presented to us last year by M. Deveria; yet it required the dexterity and the precision which that great artist possesses to obtain such a result; and all the attempts made since have proved that the number of good impressions is extremely limited, and amounts to a very small number. In a very short time the details get clogged up, and thus the use of ink as a wash becomes an impossibility," &c. &c.

"Present, COUNT LASTERIE,  
DUKE DOUBRAVILLE,  
BARON DEGERANDO, &c. &c."

This report shows the important light in which the brush style was held could it have been obtained, and the firm persuasion of the members of the commission that it must be given up as a hopeless case.

When two years ago I went to Paris, and showed the specimens of lithotint which I then possessed, I astonished all the printers and the artists of that capital. They would hardly believe that what I showed them was really and truly done with the brush. Le Mercier, the first lithographic printer in Paris, was in raptures with them, and for upwards of a month kept four of my specimens, framed and glazed, and hung up in his workshops;

may, he offered to treat with me for my French patent, but on terms which did not suit me.

I all but disposed of my patent to another house, the deed was drawn up, and only awaited signature; but one of the partners, who resided in Normandy, disagreed with the rest, and the negotiation was broken off.

Will any one assert, after these facts, that the brush style was known previously to my arrival in Paris, and that I did not invent it? Is it probable that Le Mercier and other printers, besides hundreds of artists, should have heard nothing of *the previous invention* now claimed by those who have written to you?

But what a common event this is. Now that the steam-engine is brought to perfection, do not the French—does not M. Arago, who ought to know better—claim the steam-engine for France? I maintain that no person having discovered the brush style would be fool enough to conceal it from the world, and keep his specimens hidden in a drawer until some other person claimed the invention, just to have the pleasure of pouncing upon him, and exclaim, "I found it out before you!" Those who, after a problem is solved, claim the invention, form part of those mangy curs that infest all countries, and try to rob actual inventors of the laurels which they have earned by real labour, talent, and research. I maintain, and will prove it by the testimonials of which I send you copies, that nothing has ever been published which claims being *bona fide impressions from drawings washed on stone with a brush*.

#### COPIES OF TESTIMONIALS.

I shall begin with his Majesty Louis Philippe, observing that the letter, of which I send a copy accompanying a splendid gold medal of the first class, was sent to me *eleven months after* I had exhibited my specimens to the artists and printers of Paris: so that there was ample time for claims being set forth showing that I was not the inventor of lithotint. Had such claims been made and established, I should never have been honoured by his Majesty's notice.

"Paris, le 5 Mars, 1842.

"Intendance Générale de la Liste Civile, Direction Centrale, et Secrétariat Général, 2me Bureau.

"Sir,—I have reported to the King the process of which you are the inventor, and which you designate by the name of lithotint."

"I have great pleasure in sending, as a proof of the satisfaction of the King, a gold medal bearing the effigy of his Majesty.

"Receive, Sir, the assurance of my distinguished consideration.

"The Peer of France Intendant General MONTALIVET."

"Ashburnham House, April 24, 1843"

"Sir,—I have lost no time in placing under the eyes of his Majesty the Emperor of all the Russias the interesting work which you have had the kindness to intrust me with, and which contains specimens of your invention of lithotint.

"It is highly agreeable to me to inform you that his Imperial Majesty, receiving graciously this homage on your part, has condescended to grant you the accompanying medal as a proof of his high satisfaction.

"Receive, Sir, &c.,

"BRUNOW."

Berlin is one of the capitals of Europe in which the Fine Arts are most assiduously cultivated and fostered, and his Majesty the King of Prussia, one of the best informed and most intellectual sovereigns of Europe, would never have honoured me with his notice had my process been previously known in his capital.

"Sans Souci, le 12 Octobre, 1842.

"It is with great satisfaction that I have received your drawings, printed from stone by a new process; and, in expressing to you my thanks, I invite you to accept the accompanying medal as a mark of my approbation.

"FREDERIC WILLIAM."

"To Mr. Hullmandel."

I now come to his Majesty the King of Bavaria, a sovereign known as the greatest patron of Art Europe has ever seen; his testimonial is of great weight, because he has spent the whole of his life in the midst of Art and intellectuality. Moreover, lithography was invented in his capital, and he would naturally be very careful not to award a mark of his royal approbation to an unfounded claim to any improvement in an art of which his capital is deservedly proud of being the birthplace.

"MR. C. HULLMANDEL,—I have received the obliging letter which accompanied a copy of a work containing a series of impressions from drawings executed on stone with the brush, a new invention, the fruit of your studies, facilitating in a manner hitherto un-

known, and which must be received with applause by all artists, as well as by the civilized world.

"Receive my thanks for your attention, and the assurance of my being

"Your affectionate

"LOUIS."

I next give a copy of a letter from Baron Atthalin, First Aide-de-Camp to H. M. the King of the French. In doing so, may I be allowed to observe that his letter is of great weight, because he is one of the finest lithographic draughtsmen in Europe, and that several plates which he has kindly executed for his friend Baron Taylor, and which form part of the illustrations of the "Ancienne France," have never been surpassed by anything which has been done in lithography in any part of Europe. Notwithstanding his important avocations, he takes a lively interest in the art of lithography, and is thoroughly acquainted with every improvement which has been made in that mode of printing.

"Sir,—I have just received the beautiful collection of impressions in lithotint which you have had the kindness to send me. It is with real pleasure that I have found in the charm and power of the tints possessed by the prints which form that magnificent collection, the undoubted proof of the full success which has crowned your efforts; and I can hardly describe to you the pleasure which the sight of these attractive specimens has given me, and how much I rejoice at a success which has been so much desired, not only by all artists, but by all those who cultivate or who know how to appreciate the Fine Arts. I may, perhaps, be allowed to reckon myself amongst the latter, and your kind souvenir which I owe to a few lithographic attempts which you have received with indulgence, and which authorise me to place myself in the rank of the admirers of lithography. On that ground, therefore, I address to you my sincere congratulations, &c."

"B. ATTHALIN."

"Paris, 17th Dec., 1841."

Next comes the testimonial of M. Jobard, which, from the functions which he fulfils, is a most powerful one in my favour.

M. Jobard has the appointment of Director of the Department of Industry in the Royal Musée of Brussels. He was a lithographic printer for seventeen years, and obtained the appointment he now fills in consequence of his high scientific attainments, and is, perhaps, the best authority in Europe in a matter of this kind. M. Jobard, on receipt of my specimens, was kind enough to write an article (unknown to me), which was inserted in the *Fanal* of the 11th of January, 1842, and of which I give a translation:—

"LITHOTINTE HULLMANDEL."

"Lithography, which has remained stationary for the last twelve years, has at length made a step forwards, which will make ample amends for that long period of sterility.

"The washing on stone, the only method which escaped the sagacity of Senefelder, declared impossible by all practical men, is at length discovered.

"The honour belongs entirely to M. Hullmandel, the first lithographic printer in London, and who shortly must become the most celebrated one in Europe.

"It is not an imitation more or less approximate of a wash with Indian ink, or with sepia: it is the wash itself, frankly executed with the brush on the stone, with an ink which doubtless forms the basis of the inventor's secret; neither is it one of those processes, the success of which depends on the dexterity of the artist; it appears, on the contrary, to be so simple, and so well adapted to every hand, that we already see nine different names amongst the contributors to the admirable specimens in every style which M. Hullmandel has kindly addressed to the director of the Museum of Industry. These names are the celebrated J. D. Harding and J. Nash; Messrs. F. Taylor, W. C. Smith, W. Walton, G. Scharf, H. Roug, T. S. Boys, and L. Dickenson.

"The attempts to wash on stone, made by Engelmann, Tudot, Lessore, and many others, could never be printed, for either the light and middle tints resisted the action of the acid, and printed as one black mass, or they did not resist the acid, and showed as one great white patch; there was no medium, and it is precisely that medium which M. Hullmandel has discovered. He assures us these drawings print with the great ease, and with as long numbers, as the chalk style: from their appearance we readily believe it.

"We shall now be at length delivered from those

sickly chalk tones, and those filthy yellow tints which stink of rancid oil, and end by staining the paper through and through, and spoiling, in a few years, the finest drawings.

"The first thoughts of the master will now no longer be given by heavy translators. He will be enabled himself to throw on the stone his own ideas and original thoughts in the tenth part of the time which is required by the old lithographic styles, and a hundred times more rapidly than by line engraving. We consider ourselves fortunate in being the first to announce this to the artistical world.

"We all know that there reigns in the works of great masters a certain looseness—a certain negligence even—which is always preferred to the mathematical precision of the engraver. We like to catch by surprise, as it were, the aberrations of the hand of these great composers; the high finish, the polish, the geometrical exactness, have none of that charm possessed by the *chic artistique*. The former produce that cold admiration which is doled out to a work of patience, the latter excites you like a flash of the improvisation of genius.

"Why do we prefer the amiable morning negligé to the stiff and rich meretriciousness of full dress? None of us know exactly why. It is precisely for that reason, or rather from the same impression, that, without a known cause, the *Lithotinte* Hullmandel will carry all before it."

In consequence of the notice which I received that several claims were sent to you, Sir, with regard to the priority of the invention of lithotint here and in Paris, I wrote to M. Dauzats, an eminent painter and lithographic draughtsman, and to M. Goupil, the first publisher in Paris, and who, of course, from the nature of his business, must be better informed than any one else of all novelty connected with Art. I at the same time informed them of my intention of publishing their letters. I therefore give you their answers:—

"Paris, Sept. 12, 1843.

"I feel the greatest desire to see the splendid treats which you are preparing for us, and, as soon as Goupil has them, I shall hasten to see them. We attempt here but few or rather no drawings with the brush on stone. What is done is nothing but attempts. No artist in Paris finds this process, such as it is here, sufficiently certain to induce him to attempt, I will not say a work, but even a single plate. We have all been too disagreeably disappointed to attempt anything in that way, &c. &c."

"I remain your sincere friend,

"Goupil and Vibert, Publishers, Paris."

"Sept. 18, 1843.

"MY DEAR M. HULLMANDEL.—What you write to me concerning the intrigues of the envious does not in the least astonish me. It is thus that in all countries new inventions are received—it is thus that in all countries envy, the dominant passion of the poor in mind, attacks the fruits of intelligence and of industry.

"It is therefore with real pleasure, and with the conviction that you will promptly silence this miserable race, that I send you the declaration which you ask me to make. It is only doing homage to truth, and that title alone would be sufficient for me, even if I did not place myself, as I am happy to do, amongst your old friends. I solemnly declare, therefore, that not only before the month of April, 1841, but for these last fifteen years that I have been a publisher of prints and of lithography, neither myself or any one else in Paris has ever seen a series of impressions from any drawing executed on stone with a brush. Endless attempts have been made, 'tis true, principally by M. Motte, assisted by his son-in-law, M. Deveria, as well as by M. E. Isabey. None have succeeded. I will add, that all that which has been offered to the public as pretended drawings with the brush was nothing but drawings rubbed down with various materials, with a few finishing touches with the brush for the positive blacks. Others have attempted what they called the 'mezzotinto style,' but nothing of all this has succeeded. No series of impressions has ever been obtained, and it is with the greatest difficulty that a few, very few, proofs were printed.

"I must add to all this a very simple reflection which must naturally suggest itself to everybody. How is it that if your process has been known in Paris for such a length of time—how is it that we should still be so far from possessing it?

"Le Mercier has invented something similar to your own discovery, but, since your presence here; this invention of his, however, is completely in its infancy, and unluckily I know but too much of its invention of his: for, relying on his guaranteeing good impressions, our firm has purchased of a M. D'Orchvillers twelve landscapes, of which only 200\* were printed; but so bad was the printing, that we have been com-

\* I have taken as many as 3000 from each of several drawings.

pelled to reject the greater part. I might say much more on this subject, my dear M. Hullmandel, but I think that what I have written is more than sufficient to establish, in a most irrefutable manner, that your process is the only one hitherto known capable of giving a series of good impressions.

"I remain, your friend,

"A. GOUPIL."

It will perhaps be asked why, with such a mass of rewards and documents, I have not before this set forth my claim. To this I answer, that, being naturally of very retired habits, I remained content with these honours for my own private satisfaction; that I have a great aversion to intrude myself before the public and to become my own trumpeter, hoping that the real merit of my invention would obtain for it the notice which it deserves. However, I have been so unfairly and cruelly attacked, that I have been compelled to rise in my own defence, and establish at once that claim which might be questioned had I remained silent.

I must now beg leave to give you my views with regard to the importance of my invention, views which you will give in your own words, or not give at all, as you think fit.

When, in 1816, lithography first appeared in Paris, the public were delighted to be enabled to purchase, at a moderate price, the *original* sketches of the first artists of their capital; and so long as the public were satisfied with sketches, such men as Horace Vernet, Gericault, &c., gave up to lithography that time which was not employed on painting; but, by degrees, more and more finished drawings were executed, until patient artists, like Aubrys, Le Compte, and others, were six months in finishing a plate. Lithography now assumed the feature of engraving, and the powers of this new art showing itself in highly-finished drawings, artists of reputation gradually abandoned it, and it got entirely into the hands of lithographic draughtsmen. The consequence is, that lithography is losing ground in Paris. Lithotint will now restore lithography to its most important feature, viz., giving the *original* works of great masters, combined with that richness of effect and variety of tint which suits the taste of the public at present; for lithotint is the reverse of the chalk style in lithography: in the latter, as soon as you attempt middle tint, and still more so powerful ones (particularly as now the public expect them to be highly finished), the labour of producing them is tremendous. In lithotint, on the contrary, the finer and the quicker they are done the better. Hence men of talent will shortly turn their attention to lithotint, because they can produce rich, varied, and powerful effects on stone with as much rapidity and ease as with sepia on paper. I hardly need ask you of what value, in a century hence, would be a series of *original* drawings by Landseer, Cattermole, Wilkie, Stanfield, Calcott, &c., and how such drawings would be prized and kept as real treasures in the libraries of rich collectors; and just imagine, had lithotint been known to Rembrandt, Ruysdael, and the Venetian masters, how quickly they would have abandoned the covering of a bit of copper with millions of scratches, in order to produce a rich effect, and how gladly they would have resorted to lithotint to produce, a few hours, that which it took them a month to do on copper.

For remark, that in engraving, as well as in the hitherto used styles of lithography, freedom and raciness must be *imitated* by labour, and, in almost all cases, *translated* by a second hand; whereas, in lithotint, freedom, raciness, energy, and the master touch, are the freedom, raciness, energy, and master touch of the artist himself, produced in one minute, nay, in one second.

I am, Sir, &c.

C. HULLMANDEL.

[This mass of evidence is, as we intimated, selected from a heap of testimonials, statements, and opinions, all confirmatory of Mr. Hullmandel's sole and exclusive right to the merit of the invention—to which we now beg to add our own, given without the least hesitation, or the smallest qualification. It belongs to him, and to no other.]

## ART IN THE PROVINCES.

## EXHIBITION OF THE BIRMINGHAM SOCIETY OF ARTISTS.

The firm and healthy progress of this Society is a theme the most gratifying to contemplate, whether by the mere frequenter of exhibitions, the amateur, or the artist. Its management is of a pure, energetic, and liberal character, and merits that cordial support which this year has been accorded it by so many of the leading men of the profession. Its list of exhibitors is thronged by the first names, and the rooms more than sprinkled with first-rate works. Some few of the principal features have of course been noticed fully in our own columns while reviewing the metropolitan exhibitions of the past season, and must now take their place in a more general description of this very interesting assemblage of works.

The character of the exhibition, as a whole, may be gathered from the appearance in one room—"the large room"—of the names of—we take them *seriatim* as they occur in the catalogue—Edwin Landseer, Hurlstone, Creswick, Frith, Pyne, Uwins, Von Holst, MacIse, Turner, Etty, Hollins, Stanfield, Stone, Lee, Woolmer, Collins, Patten, Shee, Herbert, Fraser, Redgrave, Holland, and Egg.

The centre of the room has fallen, as a matter of course, to MacIse's fine work of 'The Actor's Reception of the Author,' from "Gil Blas," so well known and so well appreciated at the Royal Academy, and still attracting wondering crowds in Birmingham.

EDWIN LANDSEER's picture is one of 'Dead Game,' painted now some considerable time since, and not in his finest style.

It is impossible to say the same of an extraordinarily fine picture by STANFIELD (No. 86), 'St. Michael's Mount, Cornwall' (the property of Mr. Jos. Gillott), which is in his very finest style, if not time. This picture was, we believe, painted about twelve years ago; but, if not, it is one of the works which would sanction the loss of a date in the recollection of the picture. It is now again new to the public. The subject, the well-known mount, partly obscured in gloom and spray, and wallowing in a finely-painted "awkward and chopping sea," while what may be called the foreground is occupied by some of that sea lumber which falls so majestically heavy from the hands of Stanfield, and nowhere with more felicitous effect than in this instance. If any drawback may be claimed on the beauties of this picture, it would be in the sky, which we cannot help thinking much too hard and busy for the clamorous demands of the sea and mount for pictorial prominence.

No. 13. HURLSTONE's 'Scene and Characters in a Spanish Posada, in Andalusia,' is one of this gentleman's happiest combinations of colour and Spanish character, and has considerably improved by only a few months rough usage by old time and travel.

No. 135. CRESWICK has here, in the 'Wharf-dale, Yorkshire,' one of his happiest morceaux, low in tone, without weakness, and quiet as the glen of which it is intended to call up our memories.

No. 29. FRITH, 'A Scene from Sterne's "Sentimental Journey." The female of this picture is piquancy itself; the Sterne a little too sly; and the Frenchman, the personification of the beau of his particular grade. The finish is pure and unobtrusive, and the colour clear.

No. 37. PYNE, 'Greenwich from the Park.' With this noble and beautiful work, one of the most valuable contributions to English landscape painting, most of our readers are acquainted. It was one of the leading attractions at the recent exhibition of the Society of British Artists.

No. 38. UWINS, R.A., 'The Sailor engaged to marry, returns only to die.' This little bijou continues here, as in London, to start the tears as far as the eyelid, and if they roll not down the cheek, it is that the usages of an exhibition room are powerful enough to hold them trembling on the verge. It is a useful picture in this part of the room, and sobers the feelings down to that quiet point from which they may bound over the gorgeous effects of MacIse and Turner, whose pictures are near it.

No. 49. VON HOLST, 'Scene from the Second Part of Henry VI.' "The folding-doors of an inner chamber are thrown open, and Gloucester is

discovered dead in his bed." This is a picture in the style of which few are working. It is severe and impressive, and calculated to move but feebly the sentiments of those who shrink from before a grand passion, and collect the pettities of Art. But it is a soul-stirring work to those who, on the contrary, are anxiously awaiting the time in which unshackled Art shall be ranging the higher walks of tragedy, history, and high sentiment; and we are thankful to Mr. Von Holst for stepping forward even somewhat before the times are ripe for works conceived at any rate in a sublime mood.

No. 56. ETTY, R.A., 'A Nymph' (the property of Mr. B. Johnson). This subject is of a single figure, the back of which is turned towards the spectator, very dissimilarly to most productions of this character—in which the face, eyes, and limbs, are made to stare at you. It is altogether an extraordinary work, and though of a decidedly low tone, and possessing very little colour, it holds its place equally with the splendidly coloured and luminous 'Dogana and Madonna della Salute' of the iridescent Turner which hangs in juxtaposition.

No. 92. BRIDGFORD, 'An Irish Piper.' If character, inveterate hilarity, and native archness have any value in their imitation, this we consider a first-rate picture of its class in any collection. The painting is manly and easy to an extreme, and half a dozen sets of teeth in one room, equal to those of this beau-ideal of pipers, would be equal to making any dentist in Birmingham melancholy.

The brunt of the exhibition in this room is most ably sustained by the native artists, who prove themselves upon this occasion not to have been idle since last season, and not less solicitous for their own reputation than the success of their annual exposition.

No. 102. J. J. HILL, 'Portrait of a Gentleman.' This gentleman, whoever he may be, or whether he may be of Mr. Hill's own creation or invention or not, must stand high amongst the aristocracy of intellect, and the production of such a work at once places Mr. Hill at the head of the aristocracy of Art. It is one of the finest portrait pictures that have ever been produced in this country; the drawing is flowing and correct, the colouring grand and sober, and the crowning quality in a portrait—that of expression—is one of involuntary high thought and determined purpose. The general tone of the flesh is clear, brilliant, and solid, and shines out from amongst the flesh tones nearest it like a vivid identity.

No. 108. F. H. HENSHAW, 'Worcestershire Scenery—Autumn.' This is a powerful piece of painting, and much in advance of other works of the same artist we have had heretofore the pleasure of noticing.

No. 132. J. B. HILL, 'Distant View of Aston.' This picture is a stride, and a large one, in advance of this artist's productions of last season, and, being a stride in the right direction—that of sober instead of obtrusive landscape—leads one to expect something considerable next year.

No. 150. 'Distant View of Aston and Birmingham,' J. WHITE. This is another promising native production.

While our space has prevented the enumeration of the works of many artists of the highest standing which embellish this attractive room, we shall be held excused for saying no more of those of the gentlemen practising and residing in Birmingham, than that they are highly satisfactory. They are contributed, in many instances, by the very spirited members of the Association, who are—D. Cox, H. M. Anthony, T. Baker, G. G. Bullock, T. Garner, W. Green, H. Harris, F. H. Henshaw, D. R. Hill, P. Hollins, H. H. Horsley, S. Lines, H. H. Lines, F. T. Lines, R. Mills, W. Radcliffe, W. Radcliffe, jun., H. Room, J. C. Ward, and E. Watson.

## WATER-COLOUR ROOM.

This room is a brilliant little offset to the one just gone through, and in it there is much of high and sustained pretension. The works of the younger Lines show sound study, and a determination to achieve, by careful detail and firm painting, that which many are content to "leave to the imagination" of the unimaginative.

No less than nine drawings are contributed by J. Stephanoff.

G. A. Frupp, the lately elected associate of the Old Water-Colour Society of London, has some fine drawings of landscape.

E. Watson, J. J. Jenkins, Mr. Harrison, C. H. Weigall, W. Oliver, R. J. Hamerton, T. S. Boys, T. Watts, E. Corbould, G. Dodgson, J. M. Ince, G. S. Sheppard, J. Absolon, A. E. Everitt, E. Duncan, and some others, have all contributed to the brilliancy of this little room; the principal point of attraction in which is the fine drawing of Louis Haghe: subject, 'The Town Hall at Courtray.'

## VESTIBULE.

This part of the exhibition has many works of interest; some from their undoubted character, and others from their comparative—as being so much better than the current works of the same artists. Amongst these latter are—

No. 289. 'Landscape,' by W. OLIVER; No. 302. 'Buttermere, Cumberland,' by J. B. PYNE; No. 274. 'An Old Water Mill in Devonshire—cloudy Weather,' by J. WILSON, jun.; and No. 300. 'Hageadden, the Bohemian Guide,' by J. ZEITZER.

## MIDDLE ROOM.

E. LATILLA and A. JOHNSTON lead off in this room, in No. 304. 'The Orphan of the Alps,' and No. 305, 'Rural Life.' They are followed by

No. 306. H. HAINS, 'Newstead Abbey—Evening.' This is Mr. Hains's best picture.

No. 312. G. MASON, 'Davie Gellatley, with Ban and Buscar.'

"Low down in a narrow dale they found Davie Gellatley with Ban and Buscar."—*Waverley*.

This gentleman is an artist of but few years' standing, and brilliant promise. His works are perfectly new to us, and this one is characterized by a nice discrimination of character, and an approach to elaborate finish, which in no way interferes with that bland and flowing manner in which a subject should come upon the eye.

No. 313. J. C. WARD, 'Fruit Piece.' This is a very fine piece of painting; remarkably fresh and firm in execution, transparent, and of a richness in colour very seldom realized even in similar subjects.

No. 317. J. STARK, 'Wood Scene,' equal in every respect to Mr. Stark's finest works; sober in tone, and much firmer in point of execution than any of his latter pictures of similar scenes.

No. 319. E. V. RIPPINGILLE, 'Festival of Bacchus.' This is a picture already noticed. It appears to great advantage in this collection, and is relished accordingly much more than his modern Italian subjects.

No. 325. Mrs. W. CARPENTER, 'Portrait of Mr. J. Carpenter.' This is the portrait of a gentleman of unequivocal taste, and well known as the early patron of many men when young and comparatively unknown, who are now enjoying a reputation he was instrumental in forwarding. It is a picture of surpassing talent and a truthful identity.

No. 326. J. B. PYNE, 'Vale of the Taff.' Another beautiful work, by this always excellent painter.

No. 336. Miss ANN MUNDAY, 'Flower Girl.' One of the most talented productions of the year, and the more welcome as coming from the hand of a lady.

No. 340. PETER HOLLINS, 'The Pleasures of Hope.'

"Sleep, image of the father, sleep, my boy,  
No lingering hour of sorrow shall be thine.

Bright as his manly sire the son shall be—  
In form and soul."

The real subject of this beautiful mixed bas and alto relief piece of sculpture is a very chastely conceived portrait of our most gracious Queen leaning over another of the Prince of Wales, who is asleep.

No. 353. D. COX, 'The Outskirts of a Wood.' This painting is by the veteran water-colour painter, and proves (with his other productions in oil) of how little consequence it is—when nature is kept in view—whether one or the other material be used.

No. 375. H. O'NEIL, 'Naomi and her Daughters-in-law, Ruth and Orpah.' The finest work, perhaps, that this artist has as yet produced. The composition is one of a peculiarly severe grace, not in the slightest degree allied to the grace of the familiar or high-life style. The figures are, besides, individually well drawn, and the expressions the most appropriate; and, consequently, touching to

a high degree. The most fastidious could find no other fault than the one which attaches to all Mr. O'Neill's works—an undue preponderance of an over-clean and dry thinness of manner, a little at variance, we should say, with subjects of a tender pathos, in which a fuller and richer texture would not only be admissible, but almost necessary: this with all due tenderness to the artist, whose picture nothing short of obliteration can spoil.

No. 380. R. COLLS, 'Fruit Piece,' a most extraordinary production in point of design and rich painting.

There is still a small room untouched, which contains many things of too much interest and merit to come properly noticed within the space now left us.

NEWCASTLE-ON-TYNE.—NORTH OF ENGLAND SOCIETY FOR THE PROMOTION OF THE FINE ARTS.—The fifth exhibition of this Society has been opened under the management of Mr. T. M. RICHARDSON, sen., who is universally respected both as a gentleman and an artist, not only in his native town, but very generally throughout England, for, although a resident in Newcastle, his labours have extended north, south, east, and west, about the kingdom. Upon the subject of this exhibition we have received a communication from Newcastle—some parts of which we print, as they cannot fail to interest our readers. "The exhibition in Newcastle (we believe the first held in any provincial town) was established by Mr. T. M. Richardson in the year 1822, under the title of 'the Northumberland Institution for the Promotion of the Arts.' A nominal committee of his friends, Mr. Parker being one, was named, to give the appearance of weight to the undertaking; but it was carried on by him until the year 1828, during which time the collections were exceedingly good, and the sales remunerative to the artists. But, although Mr. Richardson carried on the exhibition for these six years at a great risk and loss to himself, with the exception of what he made by the sale of his own works, the public were not satisfied, and the common opinion was, that an individual could not properly manage such a concern; consequently, Mr. Richardson, in conjunction with Mr. Parker, agreed to build the Northern Academy Rooms,\* in which for some years they held the annual exhibitions. The public, still thinking they were the parties who could best forward the interests of the Arts, a number of gentlemen took the matter into their own hands, but, after a short trial, failed in the attempt, and since that it has rested with the Fine Arts Society. It is, however, an undeniable fact, that, ever since it was taken out of the hands of Mr. Richardson, the exhibitions have been getting worse every year, and the sales fewer: some of the last exhibitions being the worst ever seen in Newcastle. We trust, however, a better day is at hand, and that under a new management the Arts may revive. The present collection contains 251 pictures, all of which are pleasing, and amongst them are very many fine works of Art.† The collection also is enriched by two magnificent pictures, from the collection of the Earl of Durham, Lambton Castle: 'The Dead Calm on the Medway,' by Sir A. W. Calcott, R.A., and the 'Seventh Plague in Egypt,' by John Martin." The *Newcastle Chronicle* thus treats the gathering of works of Art:—"An inspection of the numerous works of Art confirms us in the strong opinion we expressed as to the superiority of the exhibition, and while the pictures are generally distinguished for excellence, they are sufficiently varied to remove all appearance of sameness. We have works by the first masters of the day in their particular lines of painting, whether it be landscapes, marine views, grouping of figures, or architectural buildings; and the portraits, which are principally of public and well-known individuals, are for the most part painted by local artists, and are equally deserving of credit for the correctness of the likeness and the ease and freedom of the execution."

NORWICH.—EAST OF ENGLAND ART-UNION.

\* This became both an unpleasant and unfortunate undertaking for both of them. The Northern Academy rooms are beautifully constructed, and it is much to be regretted that they are at present lost to the Arts, being let on lease as public auction rooms.

† Previous to hanging the pictures, Mr. Richardson called together the local artists, of which there are a great number, who selected out of the body a committee for that purpose, and it appears that greater satisfaction in that department has never been given, nor has a better arrangement been ever made.

—The second exhibition of the East of England Art-Union is open at the Bazaar, St. Andrew's-street, Norwich. It consists of 222 works of Art, paintings and drawings. Among the more conspicuous and important are contributions from Rothwell, Inskipp, Tennant, Copley Fielding, Hurlstone (whose single offering, a 'Mariner Boy of the Levant,' has been, strange to say, placed close to the ceiling), Jutsum, Stark, Vickers, Watts and Zeitter. The pictures of each have passed the ordeal of the London Galleries; their exhibition in the country is undoubtedly calculated to increase the fame of the artists—we trust, also, to achieve another purpose, and one of no less importance. The Norwich school has been always one of great excellence: out of it came the elder Crome; his scarcely less distinguished sons; his pupil-rival, Cotman; the younger Cotman; Stark, one of the best and truest and most valuable of thoroughly English landscape painters; and several others, whose reputations are by no means limited to their native city. The collection now exhibiting supplies proof that the good spirit still prevails. Several admirable works were pointed out to us as the productions of native artists, professional and amateur—works that would have done no discredit to "the line" in the great room of the Royal Academy. Mr. Lound, who exhibits nine works, is, we believe, an amateur. His productions afford evidence of matured power and sound taste: No. 4, 'View of Caistor Castle,' possesses much excellence. Mr. J. B. Ladbroke (the collection contains eight of his paintings (is an artist of considerable ability: No. 119, 'Postwich Grove,' and No. 50, 'Morning,' are productions of great merit. No. 44, 'Landscape,' the work of his brother, H. Ladbroke, also deserves praise. No. 65, 'Una Spigolator,' by T. P. Downes, an artist of Yarmouth, is painted with much vigour, truth, and feeling. An exquisite little "bit of nature," by R. Leman, is No. 201, 'Road Scene;' and near it is a drawing of much delicacy and sweetness—'Sherringham, Norfolk'—by Mrs. John Mott. The Cotmans keep up the credit of the name. But the exhibition at Norwich ought to be a good exhibition—ought, perhaps, to be even better than it is—when we consider that the catalogue contains the names of no fewer than thirty artists resident in Norwich and its vicinity. The aid they have received from London is small; surely it might be much, very much, greater.\*

#### VARIETIES.

A BRITISH WALHALLA.—The idea has lately been entertained of devoting some portion of the Palace of Westminster to the reception of public monuments to eminent men; and it is now suggested in an article in the *Athenæum*, which gives the sketch of an ideal design for the façade of the British Museum, that, as accessories to it, there should be two additional wings, grouping with, though detached from, the main building. These would form two spacious halls or monumental galleries, to be appropriated to the purpose of a British Walhalla, and to be, like the German one, a national repository for the busts of eminent men, but with this difference, that it should be exclusively set apart for those who, distinguishing themselves, had also reflected honour on their country by their achievements in literature, art,

\* We may take this opportunity of directing attention to an arrangement, which, we believe, materially prejudices provincial institutions; not only in reference to the income received, but with regard to their great object and end, "the promotion of the Fine Arts." We allude to the charge of one shilling for admission to each person. This is altogether too much—it is a posterous charge indeed, all things considered. We feel assured that, if it were reduced to one-half, the receipts would be doubled. As it is, the head of a family will no doubt visit the exhibition; but if the charge were one-half, he would be accompanied by the several members of his family. At Norwich, we paid one shilling to look at 220 pictures; our visit was paid between eleven and twelve o'clock; and we had the room entirely to ourselves for half an hour. We trust this evil—for an evil be sure it is—will be remedied, and that at no very distant period.

or science; and surely no more fitting locality could be found for monumental busts of those who have earned renown in the peaceful service of the muses, than within the precincts of a national museum. Undoubtedly such scheme would be an innovation—an extension of the purposes to which the Museum is now applied, but certainly not at all incompatible or in any way interfering with them. The two buildings proposed would be only adjuncts to, not actually integral parts of, the Museum itself; so that, if there might be objection to modern sculpture or other productions of modern Art being admitted into that building, no such objection could exist to the having two separate halls for that purpose, more especially if by erecting them another very desirable point could be gained—that of carrying on the general façade to the full extent of the frontage, which is somewhat more than six hundred feet. It will, indeed, be now extended nearly as far according to the present plan, but then, how? Why, merely by two ranges of dwelling-houses forming the official residences, which cannot but greatly detract from the general architectural effect—that is, supposing there will be any character or effect to be injured; whereas two buildings of the kind recommended might be entirely lighted from above, after the manner of the German Walhalla (see p. 13 of our present volume), consequently there would be no windows at all to interfere with external design, in a style which does not well admit of such apertures. Another idea thrown out by the writer in the *Athenæum*, is that of applying those two halls to the purpose of an architectural gallery—the one for models in the Grecian, Roman, &c., style; the other for the Gothic style.

ANCIENT HISTORICAL PICTURES. — The "Granger Society" have, it appears, "gone out of existence." We lament their decease; for they were publishing a series of deeply interesting portraits, the utility of which is very considerable to the historian, the antiquary, and the man of letters, as well as to the artist. The two or three they have published are curious and valuable, and will no doubt become rare. We learn with pleasure, however, that, although the society is dead, their good works are to live after them—as Mr. J. Brown, the engraver, determines to continue the series, "being convinced that the materials in his possession are of sufficient interest to ensure support." The originator of the society, Mr. G. P. Harding, will, with Mr. Brown's co-operation, carry out the original plan. It is certain that "many ancient historical and family pictures, of importance in English history, which have never been engraved, are to be found in various collections in the kingdom; there are, also, many pictures of celebrated characters, in full length, in singular and curious costume, which have never appeared in any state, and that would greatly illustrate English history." Mr. Harding has a wonderfully fine and extensive collection of these Historical Portraits; and it would be matter of deep regret if circumstances confined them to his own portfolio. We sincerely hope the plan may be so successful as to secure a multiplication of these fine and valuable works. Some idea of the design may be given by a note of the "works in progress."—"King Henry VIII. and the Emperor Charles V.," from a most curious and interesting picture, formerly at Strawberry Hill, now in the collection of J. H. West, Esq., of Alscot Park. The engraving will be ready for delivery in January, 1844. 'The Clifford Family, containing George Earl of Cumberland, and his Countess,' fourteen portraits and numerous armorial bearings, in three parts; from the original very curious ancient picture in the collection of the Earl of Thanet, at Skipton Castle, Yorkshire. 'Prince Rupert and Colonel Murray persuading Colonel John Russell to resume his Commission;' from the original by G. Honthorst, in the collection of the Earl of Craven. 'Sir Henry Sidney, K.G., Father of Sir Philip Sidney, died 1586; and Lady Mary

Dudley, Mother of Sir Philip Sidney, died 1588.

**ROYAL GIFT TO MISS PARDOE.**—It is with pleasure we record another compliment to literature. The distinguished authoress whose name heads this paragraph, and whose works are known, appreciated, and respected throughout Europe, has received a bust (executed expressly for her by Monti of Milan) of the Prince Alexander Leopold of Austria, sent to her by his mother, the Archduchess Maria Dorothea, Princess-Palatine of Hungary.

**REGAL GIFT TO JOHN BRITTON, Esq.**—We rejoice to record an honour conferred upon a veteran in British Literature and Art. Foreign sovereigns have so far surpassed our own in acknowledging merit in England, that to notice such acts is by no means an uncommon duty. To hear of a missive of the kind from Windsor would be indeed a treat. But we are on the eve of better times; who can say what a year may bring forth? It is not impossible that Mr. Wyon may be at this moment executing for his Royal Highness Prince Albert a medal for a purpose precisely similar to that to which the King of Prussia's medal is so continually applied. Meanwhile a very large number of our readers will be gratified to learn that "the King of Prussia, one of the most accomplished and liberal monarchs of the age, has presented to Mr. Britton a splendid 'Gold Medal of Merit,' as a compliment for his numerous literary works on Antiquities and the Fine Arts; but principally in acknowledgment for his 'Dictionary of the Architecture and Archaeology of the Middle Ages.' The designs on the obverse and reverse are peculiarly beautiful, strictly classical, and arranged with novelty and taste. On the former is a medallion portrait of the monarch in matted, or dull gold, on a brightly polished ground, surrounded by eight compartments; four of which have emblematical representations of Painting, Sculpture, Architecture, and Fame, alternating with representations of the Greek honey-suckle and lotus. The reverse is adorned with an elevation, in bold relief, of a building in imitation of a Greek temple, in antis, which is applied to a Museum of Antiquities, &c., in Berlin. The temple is surmounted by 'the Chariot of the Sun,' and beneath the stylobate is a Greek scroll, with griffins and a lyre. Around the verge is this inscription—'Presented by the King of Prussia to John Britton. 1843.' The obverse is the workmanship of C. Pfeffer, and the reverse is by Lachman."

**ST. JAMES'S PALACE.**—The state apartments are now entirely dismantled, and blocked up with scaffolding, being in the course of undergoing not only repainting and regilding, but a thorough renovation; and the furniture—the throne itself included—removed into some of the adjoining rooms, presents a curious scene of splendid confusion; although it looks but very scanty when arranged in the rooms, they being intended only for holding levees and courts, consequently the magnificence of the *coup d'œil* depends upon the company assembled on such occasions, and on those decorations which meet the eye in the general view. The new fittings-up and embellishments will be far more costly than heretofore; and the hangings, though only of paper of superior design and execution, as may be supposed when of that apparently cheap and homely material, the price will be forty-six shillings per yard—not much less, perhaps rather more, than fresco painting would be. There are, however, no symptoms of decoration or architectural improvement being about to take place where it is very much wanted, viz., the grand staircase, which is now almost the reverse of what its epithet implies, though it is easy to see that it is not in its original state, but has been improved, after a fashion of late years, just enough having been done to render the disregard of architectural design all the more glaring. Yet it evidently might be improved, and that in a very striking

degree, by means of a little contrivance and management, for there is a certain capability about it which is almost provokingly suggestive.

**THE COLOSSEUM, REGENT'S-PARK.**—This property, which some years ago was purchased by Mr. Braham for £40,000, has recently been disposed of to Mr. Montague, brother to the late city surveyor, for £25,000. The new proprietor intends making very great alterations, and upon a most liberal scale; but the precise nature of them is not yet known. It is, however, understood that Mr. Stanfield will be employed on the pictorial decorations, and is about to visit Italy for the purpose of making views to be substituted for the present Panorama of London.

**THE NELSON MONUMENT.**—The day for placing the statue on the column has been fixed more than once, we believe; but the operations have been delayed in consequence of some trifling alterations. According to preceding notices we have given, it will be remembered that the figure was carved in three pieces—the body being joined at the waist, the third junction being at the left shoulder, the left arm forming the third piece. The weight of the whole is sixteen tons, a reduction from the original block of about forty tons. The pieces have been temporarily united, to exhibit the effect of the statue entire. The hero is habited in full-dress uniform, and wears the decoration of his orders; the empty sleeve is brought forward and attached to the coat; in the left hand he holds his sword. By those who remember Nelson, the resemblance in person and feature is said to be striking. For ourselves, we are glad to see that the work is without the slightest affectation: it presents the man as it is probable that he was. The hat finishes the costume, and it is an addition, we believe, in compliance with the wishes of certain elderly gentlemen, whose names figure in the first pages of the "Navy List," and who yet pleasantly rate themselves among "Nelson's fire-eaters." The height of the statue is 17½ feet, and it is supposed that twelve hours will be necessary to raise it. Considering its weight, added to that of the leaves for the cap, we may reasonably express a fear of the sufficiency of the column for its support.

**MR. BOYS' ART DISTRIBUTION.**—The drawing of prizes distributed to purchasers of prints, the publications of Mr. Boys, took place in the Great Room at Exeter Hall, on Wednesday, 25th of October. Mr. Cooke, a barrister, in the chair, supported by several gentlemen of station and respectability, whose names were published, as a guarantee for the equity of the proceedings. The ceremony of drawing occupied the whole day—from eleven o'clock until about five. We remained to witness the proceedings for about half an hour—sufficient to be fully satisfied of the fairness of the plan, and the propriety of the arrangements. There were perhaps about 1000 persons present. The lots to which the highest value were attached were, 'The Trial of Charles the First,' by Mr. Fisk; 'The Trial of Lord Strafford,' by the same artist; and 'The Canterbury Pilgrims,' by Mr. E. Corbould—which fell to Nos. 8340, 8686, and 3841. The number of "prizes" distributed was 702. We have hitherto taken no notice of this "scheme;" we do not like it; yet we confess it would puzzle us to urge any solid or reasonable objection against it. At least, there has been no deception about it: it was, and never was pretended to be other than, a plan to dispose of a heavy stock of prints, some good, some indifferent, and some bad, but from which the subscriber was to select that which pleased him. He paid for his print merely the price at which it was originally published, and had a chance besides; he, then, who has got in addition a huge piece of canvas—five hundred pounds' worth of Fisk—which represents the 'Trial of Charles the First,' and thinks it to be of the value of £500, is a lucky fellow; while he who has got nothing

but his print has nothing to complain of. We may recur to this subject.

**DEPOSITORY OF FOREIGN PRINTS.**—Mr. Hering, of 137, Regent-street, has returned from a lengthened "tour" in the German States and in Austria, where he has been gathering a rich and extensive collection of works of Art. A list of some of them will be found in our advertising columns.

**RICHARD DADD.**—This unhappy young man is now, we believe, on his way to England. The Home Secretary has, as we anticipated, refused to sanction his remaining in perpetual confinement in France, on the ground that a very dangerous precedent might thus be established; and a demand for his delivery has been transmitted to the French authorities. Many additional proofs of his insanity have been had since his imprisonment in France. The ultimate destination of one of the most miserable of all the sons of Genius will be, probably, this—a confinement for the present in the Lunatic Asylum of the county of Kent, a trial for the purpose of proving his insanity, and imprisonment for life in one of the public institutions of the county at the public expense. So will end a career that promised to be one of entire honour, virtue, glory—so morally perishes one of the kindest hearted and the most highly-endowed of human beings. How true is it, that "the ways of Heaven are dark and intricate."

**THE AGED DAUGHTER OF WOOLLET THE ENGRAVER.**—the great engraver of the British school—is, it appears, a candidate for admission to the "National Benevolent Institution." She is seventy years of age, and entirely destitute. Surely, if but a tythe of the persons who have received delight from her father's works were to subscribe a halfpenny each, her election would be secured; but we trust there is no danger that British artists and lovers of Art will sustain the deep disgrace of permitting this aged lady to be rejected for "want of friends." Every subscriber of 5s. is entitled to a vote, and may vote by proxy. It is not necessary that a subscriber should take any further trouble than send his 5s., or as much more as he can afford, to either of the under-named gentlemen:—Mr. S. Cartwright, Old Burlington-street; Mr. R. Gibbs, White Hart-court, Lombard-street; Mr. R. Moffatt, Mincing-lane; and Mr. R. Westall, 115, Lower Thames-street.

**ARTISTS' AMICABLE FUND.**—The anniversary dinner of this excellent institution will take place on Monday, November 6, as usual, at the Crown and Anchor Tavern. It will give us much pleasure to attend it; for a more social, agreeable, and profitable meeting rarely takes place in the metropolis. The guests meet for enjoyment; and, in a less stately and formal style than is adopted elsewhere, they contribute to aid the important purpose of preparing for "the rainy day" that must come to many—that may come to all. We earnestly hope the results of the year's efforts will be a large augmentation of the Society's funds, and its consequent means of doing good; that the Report will exhibit increased prudence and forethought in those who are proverbially heedless of the future, but who are, more than any other class of men, bound to have a care for the future continually in mind and at heart.

**THE PRIZE CARTOONS** are still exhibiting at Suffolk-street, and are, we understand, visited daily by large numbers of persons, principally strangers in London. The subscription list is also largely augmented. We cannot alter our belief as to the advantage or disadvantage of the published work—when it shall be published—to British Art; but we are compelled to change our opinion as to the mercantile success of the speculation. We have examined "the Books," and certainly find that "the concern will pay." Nay, we believe that a profit has been realized by receipts at the doors. Still these trading principles, introduced into the Arts, do not, and cannot, elevate them; the "buying and selling

and getting gain" thoughts and habits cannot assimilate with true greatness, but are as opposed to high feelings as fire to water. The cartoons are about to be conveyed to some of the principal cities and towns of the kingdom. The cartoons which did not obtain prizes are now exhibiting at the Pantechnion, Belgrave-square.

**THE ART-UNION PRINT.**—We understand that Mr. O'Neill's painting of 'Jephthah's Daughter' is to be engraved by Mr. Lightfoot, an artist of considerable ability. We believe we speak the sentiments of a very vast majority of those whose judgment is worthy of respect, when we express our deep regret that the Committee of the Art-Union of London determine on procuring an engraving of this picture. We by no means desire to lessen its merits: it is a very pleasing work, cleverly executed, and will no doubt gratify a very large proportion of the subscribers to the Art-Union, upon whom, perhaps, it would not be saying too much to say that a production of high and rare value would be thrown away; but we contend that when "a society," formed to extend a knowledge and appreciation of British Art, issues a print, it should be with a view to education; the work should be calculated to teach; it should be of the very highest class—such as to obtain respect for the genius of the country. Will the Council of the Art-Union contend that Mr. O'Neill's graceful and agreeable assemblage of pretty maidens thrown into attitudes, can be so described? Surely not. The print may even attract an additional thousand of guinea subscribers, but it would be an absurdity to speak of it as an acquisition to the country, and an honour to the Arts. Of the generous and disinterested views of the Council of the Art-Union there can be no doubt; as little can there be of their earnest and sincere desire to serve the cause in which they have embarked; but of the soundness of their judgment there may certainly be two opinions.

## OBITUARY.

### MR. ORRIN SMITH.

Died on the 15th of Oct., at his house in Mabledon-place, Mr. John Orrin Smith, the wood-engraver. He was born at Colchester in 1799, and was educated as an architect; but relinquishing the study of this profession, came to London, and turned his attention to wood-engraving, for which he very soon evinced a decided talent. It was about the year 1824 that he began to devote himself to this branch of Art, under the instruction of Mr. Harvey. His first works of importance constituted a series of animals, illustrations to "Seeley's Bible," and some spirited heads after Kenny Meadows. In 1835 he commenced the illustrations of the French edition of "Paul and Virginia," the success of which was such that the publishers caused his portrait to be engraved as an accompaniment to the work. In the same year he was occupied in illustrations of "The Solace of Song," and these two works contain some of his finest specimens of landscape engraving. In 1839 he commenced the cuts of the "Illustrated Shakspeare," after drawings by Kenny Meadows, which work occupied him until within a few months of his death. Two years ago he entered into partnership with Mr. Linton, since which time have been produced cuts for "The Book of British Ballads," after Meadows; also for Cadell's "Waverley," "La Fontaine's Fables," "Beranger's Songs," &c. &c. His death was caused by apoplexy, induced by the shock of a shower-bath.

### MR. GEORGE MADDOX.

In his eighty-third year, Mr. George Maddox, a member of the Society of British Artists from its first formation. He was an architect, and perhaps the oldest living member of that profession. He contributed regularly to the exhibitions; but his designs were of a taste too refined to be appreciated by the public generally; he was consequently known only to a limited circle. It is now upwards of sixty years since he commenced his professional career, and the latter moiety of the term has been devoted to instruction in architec-

ture. Among his pupils are many eminent men, as Professor Cockerell, Professor Hosking, Mr. D. Burton, and others. Mr. Maddox was in advance of his time, in so far that he held at a low rate the ancient authorities—Vitruvius, Palladio, and others; but he lived long enough to find the opinions he held make their way and effect a reformation in the general taste. Some years ago he commenced a series of etchings representing capitals, entablatures, and a variety of architectural ornaments disposed in picturesque groups; but he was incapacitated by age and infirmity from proceeding with his work, which was of a very different character from all elementary works, and must have given him an elevated rank in his profession.

## REVIEWS.

### MEMOIRS AND RECOLLECTIONS OF THE LATE ABRAHAM RAIMBACH, ESQ., INCLUDING A MEMOIR OF SIR DAVID WILKIE, R.A. Edited by M. T. S. RAIMBACH, M.A.

To what style of Art soever the genius of a painter may incline him, he can indulge his bent; hence is it that the peculiar powers of the painter are developed more early than those of the engraver, who must be content to wait until good works are confided to him—those which engage him *con amore*. Had there not been any Wilkie, Abraham Raimbach had not been a less meritorious engraver than he was; but his reputation might have been less extensive. In consequence of the languishing state of Fine Art during the earlier career of Mr. Raimbach, there was nothing to force a taste upon the public, consequently nothing whereon to found the reputation of an engraver. In speaking of his first arrangement with Wilkie he says, "Anxious as I had long been for an opportunity of trying my hand upon a larger scale than I had been accustomed to, and thereby obtaining at least a chance of escape from the thralldom of devoting the labours of a whole life to the end, as it would seem, of their being shut up in a book, I gladly and at once acceded to the proposition."

Before, then, what Mr. Raimbach terms this "chance of escape" opened to him, he had already trodden what Dante calls the

"Mezzo del cammin di nostra vita;"

he was approaching his fortieth year before the tide of his popularity began to set in.

Paris had been considered the school for the art of engraving; it was consequently from members of that school that our own artists looked for improvement. It may, however, safely be said that their excellencies were their own, while their errors or weaknesses were those of the school which they imitated. Ryland and Hall, the latter the instructor of the youth of Raimbach, were both pupils of Ravenet, a Frenchman, who had settled in London. The former is chiefly known by his engravings after Angelica Kauffman, which were printed in red ink to imitate chalk drawings, a taste he brought, we believe, from France, after having studied some time under Boucher and Lebas. He afterwards enjoyed a pension of £200 a year, but was ultimately executed at Tyburn for the forgery of an India bond. The great names of this period were Woollett, Sharp, Strange, and Bartolozzi. Woollett was the greatest landscape engraver that has hitherto appeared in the profession. Some of his works after Wilson go far beyond everything that has ever been produced in the same vein of feeling. He joined West and Hall in the publication of the plates of 'La Hogue,' the 'Battle of the Boyne,' &c. In addition to his professional greatness, Woollett was in every moral respect an excellent man, being as highly estimated for his integrity as for his unequalled talent. He resided at the corner of Charlotte-street and North-street, and it was customary with him on the completion of a plate to assemble his family at the door of his study, and give three cheers. He died at the age of about fifty years, and engraving sustained in him a severe loss, as he was yet in the fulness of his power. It seems to have been reserved for him to develop the truth, harmony, and force of his art in the particular department to which he devoted himself. Sharp was a man of eccentric habits, but his works would do honour to any school. Who that has ever seen it can forget his inimitable portrait of John Hunter? His first great work was 'The Doctors of the Church,' which was followed by 'The Sortie of

Gibraltar,' 'King Lear,' and numerous other fine works. He was a disciple of Johanna Southcote, whose portrait he engraved in testimony of his faith in her prophecies. He died at Chiswick, at the age of seventy, but without having realized such a competency as might have been expected. Public taste is still an unwrought mine; at this time we may almost say that no taste existed. It would have been difficult to suppose that the works of Sharp and Woollett did not sell, because they were of a character appreciable by persons altogether without what is called taste, as by others of cultivated discernment. Book illustrations, which have since created a particular section in the profession, were then the mainstay of the engraver. Hall engraved, after West, 'Cromwell Dissolving the Long Parliament,' and a few other plates, which were found to be so unprofitable that he afterwards occupied himself in book illustrations, such as those in Macklin's Bible, and Bowyer's edition of Hume's England.

The memoir is contained in one volume (pp. 203); and, besides a brief biographical notice of Sir David Wilkie, is accompanied by a profile portrait of Mr. Raimbach, most effectively engraved by Freebairn, in the medallion manner. The life of an engraver is even less eventful than that of a painter. It is not his part to seek inspiration from the poetry of nature, nor from the eloquence of the canvas of the old schools. The very pith of his vocation lies within his own sanctum. What, however, Mr. Raimbach has to tell, he communicates in a manner very straightforward and unaffected. He was born in London on the 16th of February, 1776, in Cecil-court, St. Martin's-lane. His father was a native of Switzerland, who came to this country in his boyhood, and passed here the remainder of his life; and he was (the subject of the memoir) the eldest survivor of his family, all his seniors having died in infancy, and he himself escaping death but by a miracle, having been suffered by his nurse to fall from a second-floor window. His "book learning" he acquired at the Library School of St. Martin's, at which institution Liston, the comedian, acted as an assistant, but subsequently to the term of young Raimbach, among whose contemporaries were Charles Mathews, Henry Winchester (afterwards Lord Mayor), John Richter (who was tried for treason with Hardy and Tooke), and others more or less known. He thus describes the circumstances that led to the selection of the profession of an engraver for him:—

"A fondness for pictures and prints, together with a certain degree of readiness and a good deal of perseverance in the practice of drawing, pointed out very early to my friends some branch of the Fine Arts as a congenial and suitable profession for me, and thereby preferring it to the study of the law, as it is called in an attorney's office, which had been first thought of. I do not know how it was that engraving was chosen as the most fitting department of Art for me to pursue, unless it was suggested by the cleverness with which I used to dig with a cobbler's awl upon a marble, ground flat upon the pavement, the initial letters of my schoolfellows' names. I rather wonder that this did not lead to my being made a seal-cutter or carver of stone. Engraving was, however, determined on; and, in the beginning of the year 1789, application was personally made by my father to the two most eminent men in the art, Mr. Sharp and Mr. Heath, the former of whom professed himself to be unwilling to take a pupil, as he had it in contemplation to go abroad (which, by the bye, he never did); and the latter stated, what I believe was true enough, that he was already overstocked with pupils. An engagement was ultimately entered into with Mr. Hall; and, after a short interval of probation, articles for seven years were finally agreed on, and signed by the respective parties, and witnessed by Mr. Hall's son-in-law, Stephen Storace, the musical composer. The conditions of the engagement were, that I was to breakfast and dine at Mr. Hall's and sleep at home, my friends to pay a premium of fifty pounds. This sum was only half the usual fee; but my father pleaded poverty in his so peculiarly odd manner that it could not be resisted."

The celebrity of Mr. Raimbach stood forth in its *alto relievo* as prominently in advance of that of Mr. Hall, as did the fame of the latter outrun the reputation of his master, Ravenet. Raimbach did not consider it a matter to be regretted that his pupilage was not spent under Sharp or Heath instead of Mr. Hall, because, as he accurately observes, the pupil cannot, at will, invest himself with the mantle of the master. If the former have any genius at all, it takes a path of its own, and signalises itself according to its own impulses; the pupil owes to his particular master no more than could have been afforded him by any other. We

cannot, at the same time, think of the works of Correggio, and of anything that his uncle Lorenzo ever did; in Titian we forget Bellini; and in Raffaele we do not retrograde to Giovanni Sanzio, not even to Perugino; in contemplating Douw we think only of Gherard himself, and not of Rembrandt; nor does "that Antonio Vandyke" remind us of Rubens. On the other hand, it is not to be expected that the famous master, as already alluded to, can form a school of famous disciples.

Mr. Raimbach reckons among the chief advantages of his being placed as he was, the opportunities of getting, occasionally, a glimpse of persons of distinction and notoriety. He says:—

"Sheridan came twice or thrice; once with Joseph Richardson, author of *The Fugitive*, during the engraving of his portrait; and my memory dwells with pleasure to this hour on the recollection of his having said a few kindly and encouraging words to me, a boy, drawing at the time in the study. I was, however, most struck with what seemed, in such a man, an undue and unbecoming anxiety about his good looks in the portrait about to be executed. The effluence in his face had been indicated by Sir Joshua in his picture, not, it may be presumed, *à bon gré*, on the part of Sheridan, and it was strongly evident he deprecated its transfer to the print. I need scarcely say that Hall set his mind at ease on this point; but I could not but wonder that a matter that might be excused in the other sex, should have had power to ruffle the thoughts of the great wit, poet, and orator of the age."

This portrait of Sheridan, after Reynolds, was the first work undertaken by Hall, after Raimbach was placed under him. He published it himself, but it was unsuccessful. Macklin offered for the plate 450 guineas, but the price set upon it being 500 guineas, it remained in the hands of the engraver, and perhaps did not realize half that sum. This was almost the last considerable plate executed by Hall. In 1796 Raimbach's term with him expired, after which (he Hall) fell into ill health, and died at the age of about fifty-seven.

Among the visitors to Mr. Hall's study are mentioned John Ireland, George Steevens, Hoole, the two Hickeys, Sir Richard Worsley, West, Northcote, Opie, Flaxman, &c. On the expiration of his articulated term young Raimbach became anxious for employment on his own account, but, from the state of the Arts, his prospect was anything but cheering. Politics were then the all-absorbing theme; the war of the French Revolution, and its rapid succession of important events, left people little time to bestow on the cultivation of the arts of peace. Indeed, at so low an ebb was patronage, that the Royal Academy was, during the administration of Mr. Pitt, exempted from certain taxes then levied.

The booksellers were then the patrons of engraving; it was therefore to them that Raimbach applied for employment. He met with many refusals, but at length received a note from Stockdale, the bookseller in Piccadilly, to whom he had applied, and from whom he received his first commission, which was to engrave the portrait of a Maroon Chief, for Edwards's "History of the Maroon War." The beginning was not an agreeable one; no terms had been determined upon between the parties, and Stockdale, when the work was finished, disputed the price, which was six guineas. He wrote to Raimbach, declaring his surprise at the price, which he did not expect would have exceeded two guineas, and expressed a suspicion that the young artist must have consulted some "unconscionable engraver." To this his reply was as follows:—

"Sir,—I am very sorry that the note I sent to you yesterday should have occasioned any surprise; and I can assure you that I was myself much astonished when I understood that you expected to be asked no more than two guineas for the produce of three weeks' labour. With respect to the suspicion you entertain of my having consulted some very unconscionable engraver, I beg leave to inform you, that I was regulated in my charge by one in whose favour I have heard you express yourself in strong terms of approbation. I should be sorry to forfeit the good opinion of any one, more especially of a gentleman who has behaved with more than common civility; but I must be allowed to say, that I would decline any man's favour who would wish to reduce the value of my labour to the level of blacking shoes, or sweeping the streets. If there should still exist a difference of opinion between us as to what ought to be the price of the plate, I am willing to abide by the decision of any engraver of real respectability that is connected with either party."

"I beg to decline the impressions, as I do not wish to receive any obligation that may be considered undeserved."

"I am, Sir, your obedient servant,  
A. RAIMBACH."

Through the mediation of Mr. Philip Audinet, the price was fixed at four guineas, and thus terminated the affair with Stockdale, which was by no means an auspicious commencement. His next commission was from Cooke, of Paternoster-row, who was publishing miniature editions of the poets and novelists; this was to engrave a little picture by Kirk, from the "Tales of the Genii," undertaken, as he says, under the condition of "no cure, no pay;" if Cooke did not approve, the engraver was to receive nothing. Mr. Cooke, however, was pleased to pronounce favourably on the work, and subsequent employment was the result, but only from time to time. Indeed his prospects of success were anything but encouraging; he was, however, steady in his perseverance, and obtained admission into the classes of the Academy, wherein he continued to draw for nine years, to which course of study he attributes much of his excellence. In the year 1799 he obtained a silver medal for his drawing from the living model. Of the state of the classes at this time, he says:—

"Both the Antique and Life Academies were crowded with young men, aspirants for fame and fortune; and it is painful to reflect on the very small number, in proportion to the aggregate of students, that have since obtained either the one or the other. And of the few who acquire some celebrity in their day, how rare are the instances of their fame outliving the fortunate possessors themselves! 'Rari nantes in gurgite vasto.' It must be confessed that in regard to talent, or even indications of talent, the then actual state of the schools was little calculated to do honour to the institution; and so it was evidently considered by the academicians, inasmuch as an order of the council was decreed that every student in each department should submit anew, for the judgment of the Academy, a specimen of his drawing."

In this, the world of Art is like every other world. Of the many who set forth, there are few who attain the desired goal; but in another point it is unlike everything else. How many artists are there of real merit, of whom the world has never heard before their death; and how many are there who are never mentioned after their decease! This probation was carried out to a result beyond, perhaps, what was intended: it was, that Raimbach more than once found himself the only student in the school—himself, the model, and the visiting academicians, being the only persons present. Among the visitors of the Life Academy at this time were, Barry, Hamilton, Stothard, Hoppner, Beechey, Northcote, Opie, Shee, Fuseli, Banks, Nolkenens, and Flaxman.

(To be continued.)

**THE IMPERIAL FAMILY BIBLE.** Illustrated by a Series of Engravings, from the Old Masters, and from Original Designs. By JOHN MARTIN, K.L. Publishers, BLACKIE and SON, Edinburgh.

"The Book" is proceeding towards completion. We have before us the 27th part; and it will be finished, probably, in ten more. It is a noble and beautiful edition of the Sacred Volume. No copy has ever been placed before us distinguished by so many excellencies. It is a fine specimen of typography; the engravings are excellently executed, and the subjects well selected; and it contains a mass of well and carefully digested knowledge, in the form of explanatory notes, references, and chronological tables. As a Family Bible, the work will bear out the warmest recommendation. It is singularly cheap, considering its great merit.

**ILLUSTRATIONS OF BAPTISMAL FONTS.** Publisher, VAN VOORST.

This is the first part of a work that promises to possess rare interest and value. It contains sixteen wood-engravings of remarkable fonts; each printed on a separate leaf, and prefaced by a page of historical and descriptive letter-press. It will be difficult to imagine, without such aid as we have before us, the wonderful beauty and variety of these sacred relics of old times, the most venerable of all the bequests of "hore antiquitie." Some of them are productions of ages very remote—perhaps the earliest acquisitions of Christianity—but most of them are finely and elaborately carved: for the Church was, at all events, the patron of the Arts, and temples dedicated to "the Supreme" were, in former days, built with a little more skill and care than barns or cotton factories. The engravings on wood are beautifully executed. The work is another boon to the public, supplied by a publisher of liberality, judgment and taste.

**THE EARL OF LICHFIELD'S SHOOTING PARTY.**

Painted by F. GRANT. Engraved by W. H. SIMMONS. Publishers, GRAVES & WARMSLEY. This is a clever composition—the work of an accomplished painter; and it has been engraved with considerable skill. There are thousands to whom it will be an acquisition, for it commemorates a "field triumph" in the month of September, and contains portraits of persons who have "troops of friends." These "Sporting Prints," as they are called, have "lots" of admirers and plenty of purchasers. This is undoubtedly one of the best of its class: the noblemen, the men, and the other animals are admirably drawn; the dogs and horses are especially fine, and tell us pretty clearly who were the favourite subjects of the artists. The portraits are capital, at least those that we may recognise, the two principal persons of the group being Lord Lichfield and his noble guest, Lord Melbourne.

**THE BOOK OF THE MONTHS, AND CIRCLE OF THE SEASONS.** Publisher, DAVID BOGUE Fleet-street.

We have here one of the most elegant, agreeable and useful books of the season—a book which, we venture to say, will be equalled in beauty by none of "the Annuals," and which, for actual value, is likely to be worth them all. It contains no fewer than twenty-eight engravings on wood—engraved in a very masterly manner from the drawings of Mr. Harvey. They represent the seasons and the months, and together form a deliciously-fanciful series of illustrations. The letter-press, without pretending to communicate much that is new, brings together in a very skillful, agreeable, and comprehensive manner, a variety of "facts" incident to the several subjects treated. It is, indeed, mainly a book of natural history, "prattling prettily" of flowers, insects, birds, fishes, the clouds, the frost, the sunshine, and the thousand matters that interest all humankind. It is nicely done—done with a gentle and generous feeling—a love and appreciation of nature.

**THE DOLCE FAR NIENTE.** Painted by WINTERHALTER. Engraved by F. GIRARD. Published by GOUPIIL and VIBERT, Paris. HERING and REMINGTON, London.

This is a print of large size, a companion to that favourite one of the same artist—"The Decameron." It pictures a luxurious group, basking in the summer sun; a lassitude—but lassitude apart from weariness—pervades the whole of the assembled peasants. A couple of lazy Lazzaroni occupy the foreground—too indolent, it would seem, to move, if Vesuvius were sending its burning lava to their very feet. A youth touches the guitar—nothing stirs but his fingers, and they to some languid air as debilitating as the climate. Two sweet children are among his listeners, and a young girl who seems but an indifferent auditor. In the background two mothers converse with an approach to animation; while a maiden by their side lies at full length along the arid sward, and a lad holding in his hand the grapes from which he has scarce energy enough to press the juice. The artist has completely realized his subject, bringing the *lâcheté* of Naples visibly before us.

As a work of Art it possesses very considerable merit; the grouping is admirable; the work is composed with great ability; and the expression given to the several characters introduced is—as we have intimated—in perfect keeping with the scene and season. It may not add to the high reputation of M. Winterhalter, but it will sustain it.

**THE RAISING OF JAIRUS'S DAUGHTER.** Painted by STEINLE. Lithographed by EICHENS. Publishers, HERING and REMINGTON.

A contribution from the school of Germany, and one of rare value. The painter has thoroughly and deeply felt his subject. The calm repose of the Saviour is conveyed with remarkable success; and the expression given to the countenance of the restored maiden is entirely consistent with truth. Death, although it has given back life, has, as yet, withheld consciousness; the portrait is that of a girl taken a few moments before decease; pale and worn, but yet beautiful, and seemingly fitter for a world of rest than for one of turmoil and trouble. The Apostles look tranquilly on; not so the parents of the reviving child—in them

joy and wonder are happily blended. The composition is very beautiful and very effective; the story is eloquently and emphatically told; and, as an illustration of the miracles of the Redeemer, few pictures can be considered more successful. Here, as usual, however, we trace the power of the artist to another source than Nature—to the great works of the great minds that have been his predecessors. The print forms an admirable "companion" to Overbeck's 'Widow of Nain.'

**RUTH GLEANING.** Painted by STOTHARD, R.A.  
Engraved by G. H. EVERY. Publisher, HOLLIER, Chancery-lane.

Any copy after Stothard will be welcomed by those who can appreciate excellence; and this print is from one of the most pleasing and beautiful of the great artist's pictures. It is calculated to "tell" with the mass; the subject will be at once understood; it requires no elaborate explanation to make it touch the heart; and this, after all, is the high purpose of the painter. To multiply productions of this class is to delight and instruct mankind—to inculcate a lesson the force of which will never weaken.

**AN ADDRESS TO THE ROYAL ACADEMY OF LONDON,** on the Introduction of a New Fine Art and Architecture. Printed for private use, pending their decision. 1843.

The author of this address, Mr. W. Vose Pickett, comes forward with very strong and unusual claims to notice, for the discovery or invention of a new Fine Art is very much like that of a new sense. New fashions, further developments, other processes and appliances of the Fine Arts, are feasible and credible; but we may be excused for looking with some degree of scepticism—not to say suspicion—on what calls itself a "New Art and Architecture;" and we must hold our judgment respecting it in reserve, until its author shall have disclosed its nature more fully than he at present deems it prudent to do.

The Royal Academy seem to have felt the same sort of perplexity, and have since relieved themselves from it, as we understand, by civilly declining to hold out any encouragement to what did not come under their cognizance, and which they could not in any way engage to countenance or approve, having no positive information relative to it, and no other guarantee for its value than the projector's own character of it. Indeed, it appears rather a strange step on the part of the latter, to make an application of the kind to the Academy, since it does not profess to assist in bringing forward and promoting new inventions or improvements, however ingenious or valuable they may be. Neither is it very much to be wondered that the Royal Society, to whom Mr. Pickett made a similar application with the same reservation as to his invention, should have treated it in a similar manner.

What is not least strange of all in the business is, that, instead of seeking patronage or encouragement in such quarters as those, Mr. Pickett should not have applied at all to that body who are most of all interested in his "New Art and Architecture," and who would be most of all active, it may be presumed, in ensuring its success, should it be found, on further investigation, to be no less practicable than excellent.

We hardly need say that the body we allude to is the Institute of British Architects, one of whose avowed objects it is to further what relates to their own art and profession. Yet even there again he might not have been more successful, since they, too, might have demanded—nor would it have been at all unreasonable—some positive and explicit information in regard to the invention for which their favour was solicited. Indeed we cannot help saying that the extreme caution and reserve shown on the part of Mr. Pickett are rather unfavourable symptoms. If his discovery be really what he describes it—a new Art—the degree of mystery in which he wraps it up is altogether a superfluous precaution, for as such it cannot be a single specific invention or process, capable of being pirated, or of being secured from piracy, either by piracy or by any other sort of legal protection. Specimens of it might, therefore, be shown with perfect safety, and the doing so would be the speediest and most effective mode of bringing the invention before the public. As far as we can

gather from what is said in this address. Mr. Pickett has invented some entirely new mode of combining metals together, so as to produce a great variety of colours and tints, and thereby render them decidedly ornamental materials in architectural construction, and has also devised a system of design or style that would be adapted to, and of consistent character with, such "Metallic Architecture" as he calls it. What then is there to conceal? The exhibiting specimens of his new metallic compositions would not reveal the processes by which they are produced; on the other hand, the showing a specimen of the style likely to result from the introduction of what he calls "metallic façades," ought rather to advance his interest than be at all detrimental to it, by securing public applause for his ingenuity and his taste. If Mr. Pickett will keep his talents entirely behind a curtain, he can hardly expect more encouraging treatment than what he has experienced.

We ourselves are quite as much in the dark as others as to what his "new Art" may be, therefore cannot venture to say anything, at present, in favour of what is to us an enigma.

**TO ARTISTS.**—An ARTIST conversant with ARCHITECTURE and PERSPECTIVE, offers his services to Painters, to draw in their back-grounds and Architectural subjects.—References as to ability if required. For terms apply to Mr. Sadler, 29, Wilmington-square.

#### TO ENGRAVERS.

**WANTED,** a fine ENGRAVING, suitable for an Art-Union Distribution. Any one having such a Plate completed, or nearly so, will oblige the Committee by sending specimens and terms, directed to Mr. G. M. Mason, 67, New-street, Birmingham, on or before Wednesday the 8th of November next.

**MEDAL DIE ENGRAVING.**—An Artist of established practice will give instruction to any Gentleman desirous of acquiring a knowledge of this admired Art; or he would be willing to engage a young Man as an out-door Pupil. Power in drawing being indispensable, no applications can be attended to without such proficiency. For cards of address, apply to Messrs. Roberson and Co., 31, Long-acre.

**HAMPTON COURT.**—BOARD and LODGING for Single Gentlemen, at the King's Arms Hotel, Hampton Court, adjoining the Royal Gardens, at TWO GUINEAS per week, including attendance of every description.

Permission is given to copy in the Palace, on application to Lord Lincoln, Chief Commissioner of Woods and Forests, Whitehall-place.

**NOTICE.**—PATENT RELIEVO LEATHER HANGINGS and CARTON-TOILE OFFICE, 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the PATENT RELIEVO LEATHERS, the CARTON-TOILE, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c. &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rampart, Paris.—May 25, 1842.

**THE BOCCIUS LIGHT.**—The Patentee is now ready to SUPPLY BURNERS of any dimensions, to the Public. The advantages offered are:—A very brilliant, soft, and intensely powerful Light, unaccompanied by soot, smoke, or smell; free ventilation; and a saving of from 35 to 80 per cent. The Burners are sold at a very moderate cost; NO RENTAL IS CHARGED FOR THEIR USE; and thus the entire expense is at once definitively known. The gas used is the common gas, burned on A NEW PRINCIPLE; and the apparatus is so simple, that, on screwing it on to the ordinary fittings, it is ready for immediate lighting. It is adapted alike to Shops, Private Dwellings, Halls, Warehouses, Churches, Chapels, and Public Thoroughfares.

Apply, daily, from 10 till 4, at the Office, 14, Duke-street, Adelphi, where the Light may be seen. It may also be seen at Mr. Moxhay's, Hall of Commerce, Threadneedle-street, whose entire establishment is lighted with the Boccia Burners.

**THE PARISIAN DETERGENTS** render OLD GILDING, LACQUER, and BRONZE, however faded, dirty, or tarnished, equal to new. The effect is sudden, astonishing, and lasting; trouble merely sponging the surface, and expense only a few pence for a large Gilt Frame. Fly-spots are at once removed from Gilding; no necessity, therefore, to cover from the fly. Gold Detergent, 2s. 6d. per bottle; Lacquer and Bronze, 1s. 6d.; Lamp (interior), 1s. 4d. All are innoxious and inoffensive. These Detergents rank with the most valuable chemical discoveries.

Sold by UPTON and Co. (sole proprietors), Lamp Manufacturers, 33, George-street, Hanover-square, and 66, Basinghall-street, City.

N.B. A trial free of charge.—The trade supplied.

#### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES M'LEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with PICTURE FRAMES, of the very best manufacture, at prices never hitherto attempted.

A LARGE SHEET OF DRAWINGS, representing the exact patters and prices of one hundred different sized frames, ornamented with designs made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and regilt.

An extensive Stock kept seasoned for immediate delivery.—All Goods taken back, not approved of in three months.

The beautiful print of 'Una entering the Cottage,' framed from 8s. and upwards.

**PICTURE-FRAMES, CHIMNEY GLASSES, CONSOLE TABLES,** and every department of CARVING and GILDING, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regilt, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

**E. WOLFF & SON'S NEWLY-INVENTED MATHEMATICAL PENCILS, FOR MATHEMATICIANS, ARCHITECTS, AND ENGINEERS.**—Warranted to retain a very fine Point.

**E. WOLFF and SON**, in introducing their Extra Hard Lead Pencils for Mathematical and Architectural purposes, beg to draw attention to the advantages resulting from their adoption in preference to the ordinary pencils. They are made of six distinct sizes, by which means they can be fitted to all instruments, and are so constructed that each Pencil may be cut in halves without waste; thus making two Pencils each of a length, the most convenient for use, and obviating the difficulties existing with respect to the ordinary Pencils.

E. W. and Son have also Half-round Pencils, suitable for the Spring Bow, thus preventing the necessity of dividing the Pencil down the Centre. They are made of extremely Hard Lead, of the finest quality, which will retain a very fine point, and give clear, even, and distinct lines.—Price 4s. per dozen.

#### PATTERN OF SIZES.

May be had of all Instrument Makers and Stationers, and at the Manufacturers, 23, Church-street, Spitalfields.

A sample of each Size will be sent by Post to any part of the Kingdom on the receipt of Postage Stamps equal to the amount.

**POOLLOO'S CHINESE CEMENT.**—The extraordinary properties of this Composition make it one of the most useful articles ever presented to the public. It is perfectly impervious to hot or cold water, and will resist the effects of the most intense heat. So tenacious and firm is it in its hold that a new fracture is certain to take place rather than a severance in the original. Thus it surpasses all other Cements for mending China, Glass, Ivory, the setting of Stones and Beads in Rings and Trinkets, &c.—Sold, wholesale and retail, in bottles at 1s. 6d., 2s. 6d., 4s. 6d., and 7s. 6d., by the Proprietor's sole agents, BLOFELD and Co., Cutlers and Razormakers, 6, Middle-row, Holborn; and by their appointment, at the principal Chemists and Perfumers. BLOFELD'S London made Table Knives, at BLOFELD and Co.'s, 6, Middle-row, Holborn.

**UNA ENTERING THE COTTAGE.**—Subscribers of the Art-Union are respectfully informed, they can have the above Engraving mounted in Gilt Bead Moulding Frame, or an inch Moulding Frame of various patterns and new designs, with best Platted Sheet Glass, for 15s., at P. GARBANATI'S Carving and Gilding Manufactory, 19, St. Martin's-court, Leicester-square. The Engravings fitted up free of extra charge.—To provincial customers all goods purchased at this Manufactory packed and loan of cases free of charge.

**FRAMES FOR ART-UNION PRINTS.** &c.—C. F. BIELEFELD begs to call the attention of Artists, Printers, &c., to his numerous assortment of PICTURE-FRAMES appropriate for the Art-Union and other Prints; manufactured in his improved Papier Mâché.

"The specimens of these frames, which we have seen, are certainly very beautiful."—Globe, Jan. 17, 1843.

"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

C. F. B. has just published a new Tariff of his Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street North, Strand.

## MILLER'S SILICA COLOURS.

MILLER'S GLASS MEDIUM FOR OIL PAINTING.

This Medium, having been tried by Artists of the first eminence, is found to be the grand desideratum for removing the existing evils of the Modern School; namely, the destructive effects of Varnishes, Oils, and M'Guelpa, as all pictures painted with them, after a time, lose their transparency and brilliancy, and become horny, spotted, and dark-coloured; whereas those painted with the Glass Medium have a most brilliant effect, and will be found to remain perfectly unchanged, as its durability can only be compared to painting in enamel.

Artists' Colour Manufactory, 56, Long Acre, London.

## PERMANENT DRAWING CHALK, in various colours.

E. WOLFF and Son beg to apprise Artists and Amateurs that they have, by effecting great improvements in their CRETA LÆVIS, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

FOR SKETCHING FROM NATURE, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The CRETA LÆVIS will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers', where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

### INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF and SON beg to recommend their newly-invented SKETCHING PENCILS, or PERMANENT BLACK CHALKS.

B B Very Black, for foreground.

H B Middle Tint.

N Neutral Tint, for distance.

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

\*The method of using the Creta Lævis is taught by Mr. W. H. Kearney, member of the New Water-Colour Society.

Manufactory, 23, Church-street, Spitalfields.

## DIMES AND ELAM,

ARTISTS' COLOURMEN, and Manufacturers of every Material for DRAWING AND PAINTING,

91, GREAT RUSSELL-STREET, BLOOMSBURY-SQUARE, LONDON.

### SUPERFINE PERMANENT WATER COLOURS.

**DIMES and ELAM** beg to offer their Colours to the notice of the Amateur and Artist; being prepared in the purest and most careful manner, they will be found to possess freedom in working, together with brilliancy of colour, and are warranted not to contain any deleterious matter, being made of the finest colours to be obtained.

HALF-CAKES, HALF-PRICE. MOIST WATER COLOURS.

All the above Colours are kept prepared in the moist state in thin Porcelain pans, and will be found to be extremely soluble and retain their permanency, drying firm and free from clamminess on the Paper.

**DIMES and ELAM'S CANVAS PREPARED WITH INDIA RUBBER GROUND** (for Oil Painting).

This Canvas, prepared with a ground of solution of India Rubber, is confidently recommended to the notice of the profession, its eligibility having been thoroughly acknowledged, and having received the patronage of the first Artists in the kingdom. To those gentlemen who desire that the labours of their pencils should be preserved from the effects of time (too visible in some of the finest productions of the art), this canvas is particularly recommended, as it is never subject to crack or peel, and the surface is very agreeable to Paint on. Prepared of any Dimensions, with or without Frames.

**RAND'S PATENT COLLAPSIBLE TUBE FILLED WITH OIL COLOURS, ALL SIZES.**

**DIMES and ELAM'S CIRCULATING PORTFOLIO**, containing Specimens of the First Masters in Landscape, Figure, and Flowers. Terms: £1 1s. per Quarter, or 2s. 6d. per Week.

**DRAWINGS, PRINTS, and PAINTINGS, FRAMED, GLAZED, and MOUNTED.**

NEAR THE BRITISH MUSEUM.

N.B. The NEW FRONT of the BRITISH MUSEUM. Just Published, an Engraving on Steel of the New Front of the British Museum. Prints 1s. each, in Proofs 2s.

Orders for Exportation carefully executed, and upon the lowest terms.

JUST PUBLISHED, PRICE TWO SHILLINGS,

## INSTRUCTIONS FOR THE PRACTICE OF FRESCO PAINTING,

AS GIVEN IN

THE REPORTS OF THE COMMISSIONERS OF THE FINE ARTS,

COMPILED AND ARRANGED

By W. WINSOR AND H. C. NEWTON,

Artists' Colour Makers to the Queen, &c.

In this little work is gathered from the best authorities, ancient and modern, all desirable information on the subject of Fresco Painting, under the following heads:—The Cartoon—The Selection of Lime—Causticity of the Lime—Slaking and Seasoning the Lime—Walls—Preparing the Walls—Colours—Implements—the Process of Painting—Qualities of Execution—Retouching—Moveable Frescoes—the Removal of Frescoes—On Cleaning Frescoes.

In the compilation of these precepts, a main object has been simplicity and perspicuity; they are consequently offered entirely disengaged of all useless references and quotations, and arranged in working order.

WINSOR AND NEWTON, 38, RATHBONE PLACE.

### TO PAINTERS IN WATER-COLOURS.

Just published, price 1s.,

## THE HAND-BOOK OF WATER-COLOURS,

By W. WINSOR AND H. C. NEWTON,

Artists' Colourmen to the Queen.

A brief Treatise on the Properties of every Pigment employed in Water-Colour Painting, with some Account of the Sources whence they are obtained.

LONDON: TILT AND BOGUE, FLEET STREET; WINSOR AND NEWTON, RATHBONE PLACE.

**MESSRS. HENRY GRAVES AND COMPANY,**

Her Majesty's Printers and Publishers in Ordinary, have the honour to announce the Publication of the following  
VERY BEAUTIFUL AND IMPORTANT WORKS OF ART:

**MORNING OF THE CHASE—HADDON HALL IN DAYS OF YORE.**

Engraved in the highest style of Art by H. T. RYALL, from the beautiful original drawing by FREDERICK TAYLOR.  
Price: Prints, £4 4s. .... Proofs, £7 7s. .... Before Letters, £10 10s.

**THE SHOOTING PARTY AT RANTON ABBEY.**

Engraved in the finest style of Mezzotinto, by W. H. SIMMONS, from the justly celebrated original picture, painted by FRANCIS GRANT, A.R.A.,  
Being the only Gun-Sport subject published from the Works of that most eminent Artist.  
This Engraving forms an appropriate and indispensable companion to Mr. Grant's very popular series of 'BRITISH FIELD SPORTS,' and contains Portraits of the  
Earl of Lichfield, Viscount Melbourne, Earl Sefton, and other distinguished Noblemen.  
Price: Prints, £3 3s. .... Proofs, £5 5s. .... Before Letters, £6 6s.

**THE HIGHLAND WHISKEY-STILL.**

Engraved in the most beautiful line manner by ROBERT GRAVES, A.R.A., from the very beautiful picture painted for his Grace the Duke of Wellington, K.G., by  
EDWIN LANDSEER, R.A.  
Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s. .... Artists' Proofs (very few left), £8 8s.

**THE HAWKING PARTY IN THE OLDEN TIME.**

Engraved in Mezzotinto by CHARLES G. LEWIS, from the original gallery picture painted for SAMUEL CARTWRIGHT, Esq. This splendid subject of the Sports of the  
Olden Time is engraved the same size as 'BOLTON ABBEY,' by SAMUEL COUSINS, A.R.A.  
Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s.

**THE HAWK AND THE FALCON.**

Engraved in Mezzotinto by C. G. LEWIS, as Supporters to the beautiful Plate of the 'HAWKING PARTY IN THE OLDEN TIME,' from the original pictures,  
Painted by EDWIN LANDSEER, Esq., R.A., in the possession of William Wells, Esq.  
Prints, £1 1s. .... Proofs, £2 2s. .... Before Letters, £3 3s. each Plate.

**WORKS OF SIR THOMAS LAWRENCE,**

PART THIRTEEN OF THE  
CONTAINING  
THE LATE 'MARQUIS OF LONDONDERRY,'  
'THE RIGHT HON. J. P. CURRAN,' AND 'LITTLE RED RIDING-HOOD.'  
Price: Prints, 12s. .... Proofs, £1 1s. .... Before Letters, £1 11s. 6d.

**THE WIDOWED DUCK.**

Painted by EDWIN LANDSEER, R.A., and Engraved by JOHN BURNET, F.R.S.,  
from the original picture in the possession of W. Ellis Gosling, Esq.  
Prints, £1 1s. .... Proofs, £2 2s. .... Before Letters, £3 3s.

**THE NAUGHTY BOY.**

Engraved in the line manner by W. FINDEN, from the original picture by  
EDWIN LANDSEER, R.A., and forming an exact companion to 'LITTLE RED  
RIDING HOOD,' by the same Artists.  
Price: Prints, 7s. 6d. .... Proofs, 15s. .... Before Letters, £1 11s. 6d.

**LASSIE HERDING SHEEP.**

Most exquisitely engraved in the Mezzotinto style of Art by JOHN BURNET,  
F.R.S., from the original picture painted by EDWIN LANDSEER, R.A., in the  
possession of William Wells, Esq., of Redleaf.  
Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s.

**CHILDREN FEEDING RABBITS.**

Engraved in the finest style of Mezzotinto from the very interesting picture painted by EDWIN LANDSEER, R.A., for the Hon. Mrs. Bathurst, and forming an exact  
companion to 'THE SUTHERLAND CHILDREN,' by SAMUEL COUSINS, A.R.A.  
Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s.

**CHRIST RAISING THE WIDOW'S SON.**

By OVERBECK.  
Price: Prints, 12s. .... Proofs, £1 1s. .... Before Letters, £2 2s.

**VIEWS ON THE NILE,**

FROM CAIRO TO THE SECOND CATARACT.

By OWEN JONES.  
With Historical Notices of the Monuments, &c., by SAMUEL BIRCH, Esq., Senior Assistant in the Department of Antiquities, British Museum, and Member of the  
Egyptian Societies of Cairo.  
Price, Imperial Folio, half morocco, £4 4s.

**THE FOURTH EDITION OF HAGHE'S BEAUTIFUL LITHOGRAPHIC WORK OF THE  
PASSES, FORTS, AND CITIES OF THE SCENE OF WAR IN INDIA.**

Drawn on the Spot by Dr. JAMES ARKINSON, Superintendent Surgeon of the Army of the Indus.  
Including Views of Caubul, Candahar, Ghuznee, Kwetiah: the Bolan, Siri-Bolan, Koojah, Siri Kajor, Kojak, and other celebrated Passes; the Surrender of  
Dost Mahommed to Sir William Macnaghten, &c. &c. &c.  
Price: Imperial Folio, half morocco, £4 4s. .... Coloured and mounted in Portfolio, £10 10s.

**THE SECOND EDITION OF THE SECOND SERIES OF THE SCENE OF WAR IN INDIA.**

CONSISTING OF THE

**CHARACTER AND COSTUME OF AFGHAUNISTAN.**

Lithographed by CHARLES HAGHE, from the original drawings by CAPTAIN L. W. HART, of the 22nd Bengal Infantry.  
Including authentic resemblances of all the most celebrated Chiefs, viz., Ukbar Khan, Shah Shoojan, Sufter-jung, Shahzadu Timoor, Haje Khan Kauker, the Civil and  
Military Functionaries, and Costumes of the Country beyond the Indus, the celebrated Sandal Gates, Views of the Kyber Pass, Jellalabad, Palace at Candahar, &c. &c. &c.  
Price: Imperial Folio, half morocco, £4 4s. .... Coloured and mounted, in Portfolio, £10 10s.

**WILKIE'S SKETCHES IN TURKEY, SYRIA, AND EGYPT.**

Lithographed in the finest style by JOSEPH NASH, Esq.  
This splendid work, consisting of fac-similes of the original drawings Sir DAVID WILKIE intended as studies for composition, but which his untimely death prevented,  
includes the beautiful subjects of 'The Letter-Writer,' 'The Tartar announcing the Fall of Acre,' 'Portraits of the Sultan,' 'The Pasha of Egypt,' and many others not  
less beautiful in costume than striking for Eastern character.  
Price: Imperial Folio, half morocco, £4 4s. .... Coloured and mounted, in exact imitation of the original drawings, £10 10s.  
A few Copies printed uniform with 'ROBERTS'S HOLY LAND,' Price £6 6s.

London: Published by HENRY GRAVES AND COMPANY, Printers and Publishers in Ordinary to her Majesty  
and his Royal Highness Prince Albert, 6, Pall-Mall.

THIS JOURNAL, BEING STAMPED, CIRCULATES, POSTAGE FREE, TO ALL PARTS OF THE UNITED KINGDOM.

**BRITISH INSTITUTION, Pall-mall.**—NOTICE to EXHIBITORS.—All PICTURES and other WORKS of ART intended for EXHIBITION and SALE the ensuing season, must be sent for the inspection of the Committee on MONDAY the 15th, and TUESDAY the 16th of January next, between the hours of ten in the morning and five in the evening; after which time no picture or other work of Art will be received. Portraits, Drawings, Water-colours, and Architectural Drawings, are inadmissible.

N.B. No picture will be received for sale that is not *bona fide* the property of the artist.

WILLIAM BARNARD, Keeper.

**THE GALLERY, 53, PALL MALL,** adjoining the British Institution, is now OPEN, with a Collection of PICTURES by the Old Masters; among which is the celebrated picture by Ludovico Caracci, of 'Christ curing the Blind,' from the Lucca Gallery; together with capital works by the great Masters, the property of Mr. Buchanan, author of the 'Memoirs of Painting;' and which will be disposed of by a SALE OF SHARES, at the rate of £5 per Share, with certain positive advantages to early subscribers, as fully explained in the Prospectus thereof, which may be had at the Gallery, or by letter, addressed to BENJ. DACOSTA, Secretary.

Open from Ten till Four o'clock.—Admittance, One Shilling.

**ART-UNION OF LONDON,**  
4, TRAFALGAR-SQUARE, CHARING-CROSS.  
Established 1837.

President—H. R. H. the Duke of CAMBRIDGE.

Vice-President—The Most Noble the Marquis of NORTHAMPTON, P.R.S.

The Subscribers of the current year will receive for each guinea paid, besides the chance of obtaining a valuable work of Art, an impression of a Line Engraving by Mr. E. GOODALL, from the picture by CLARKSON STANFIELD, R.A., 'Castello d'Ischia;' and, in addition to this, a Series of Twenty-two Designs in Outline (size, twelve inches by eight), made expressly for the Society, by Mr. H. C. SELWY, and engraved by Mr. HENRY MOSER, illustrative of the 'Pilgrim's Progress.' Several of the Outlines are already engraved, and may be seen at the Office. An early subscription is earnestly solicited, to enable the Committee to make arrangements for their immediate distribution.

A finished proof of the Engraving due to the Subscribers of the year 1843 ('Raffaello and the Fornarina,' engraved by Mr. L. STROCKS, after Sir A. CALLCOTT, R.A.), may be seen at the Office.

GEORGE GODWIN, F.R.S., F.S.A., } Hon. Secs.  
LEWIS POCOCK, F.S.A. }  
November, 1843.

Now ready, Second Edition, post 8vo., cloth, 6s.,  
**ENGLISH SURNAMES:** a series of Essays on Family Nomenclature—Historical, Etymological, and Humorous. By MARK ANTONY LOVER. With illustrations on wood.

Also, Second Edition, post 8vo., cloth, 6s.,

In the Press, by the same Editor,

**GOLDSMITH'S POEMS.** Uniform with the above.

London: Longman, Brown, Green, and Longmans.

Just published, post 8vo., One Guinea, handsomely bound in morocco and gilt,

**THE PRISM OF IMAGINATION for 1844.**

By the Baroness DE CALABRELLA, Author of 'The Prism of Thought for 1843.' The Ornamental Designs by Mr. OWEN JONES. Each page will be surrounded with rich and appropriate Ornamental Borders, printed in Colours and Gold. There will be Eight Ornamental Titles illustrative of the Tales, and Eight Lithographic Illustrations, designed by HENRY WARREN. The Letterpress will consist of a series of five Imaginative Tales, entitled—The Miniature—The Ring—The Pen—The Armet—The Watch.

London: Longman, Brown, Green, and Longmans.

**FINDEN'S ROYAL GALLERY of BRITISH ART.**—Part XI. will be published on the 12th of December, containing

The DELIVERANCE of ST. PETER from PRISON.

Painted by W. HILTON, R.A.

The DEATH of the RED DEER. Painted by Sir D. WILKIE, R.A.

The HARVEST WAGGON. Painted by T. GAINSBOROUGH, R.A.

London: Published for the Proprietors, by T. G. March, 4, Hanover-street, Hanover-square; F. G. Moon, 20, Threadneedle-street; & R. Ackermann & Co., Strand.

Now ready, price Half-a-Crown,

**THE COMIC ALMANAC for 1844;** containing Twelve Engravings by GEORGE CRUIKSHANK, and many other Embellishments.

'The matchless and inexhaustible George is this year more exuberant than ever, and with all his exuberance, if possible even more delightfully comic with pencil and pen.'—*Literary Gazette*.

D. Bogue, 86, Fleet-street; and all Booksellers.

**TREATISE on FRESCO, ENCAUSTIC, and TEMPERA PAINTING.** By EUGENIO LATTILA. Price 5s.

Being the substance of Lectures delivered at the School of Design, Saville House, and at the Society of British Artists, in the years 1838 and 1840. This work describes the different methods of the Greeks and Italians; the Stuccoes, Vehicles, and Pigments used by them and employed by the authors.

Published by Hering and Remington, German Repository of Art, 137, Regent-street.

**"THE FAVOURITE ANNUAL OF THE SEASON."**

In large 8vo., price 12s., elegantly bound.

**FRIENDSHIP'S OFFERING for 1844.** This long established Annual now makes its appearance in a new form and a new dress, the size being greatly enlarged, and the list of Steel Engravings increased both in beauty and number, with the further addition of appropriate Wood Engravings and other embellishments. The volume thus changed in everything but the price, and the genius and distinction of the Contributors, is justly styled "the best and cheapest Annual of the Season."

London: Smith, Elder, and Co., 65, Cornhill.

**THE FIRST OF THE ANNUALS.**

Now ready, elegantly bound, price 12s.

**ACKERMANN'S FORGET ME NOT,** for 1844, a CHRISTMAS, NEW YEAR'S, and BIRTHDAY PRESENT. Containing Contributions by the most distinguished Authors of the day, and Illustrations by the most eminent Artists. Edited by FREDERIC SHOEBEL, Esq.

Appealing, by the magic of its name,  
To gentle feelings and affections kept  
Within the heart like gold.

L. E. L.

Among the contents of this volume will be found:—Funeral of Southey, by E. Quillinan—Letter of Lord Byron to the Birkbeck Shepherd—Lily parting with her Cat, by James Thomson, Author of 'The Seasons'—Love's Signal Flower, by L. E. L.—and Poems and Tales by the Countess of Blessington, Lady E. S. Wortley, Agnes Strickland, Miss Mitford, Eliza Cook, Mrs. Gore, Delta, Mrs. S. C. Hall, Miss Power, Robert Bell, Miss Pardoe, Mary Howitt, John Clare, C. Swain, &c.

**TRAVELS in the INTERIOR of NORTH AMERICA.** By MAXIMILIAN, PRINCE OF WIND. Accompanied by eighty-one elaborately-coloured Plates, imperial folio, numerous Engravings on wood, and a large Map. Translated from the German by H. EVANS LLOYD. Two elegantly-bound volumes. Price twenty-five guineas.

This splendid work must prove highly gratifying to all persons who feel interested in the fate of the Red Men; in it will be found a mass of information respecting their Traditions, Manners, Customs, Character, illustrated by a volume of coloured Plates, far superior in every respect to anything that has hitherto accompanied a similar work.

**THE CLANS,** consisting of highly-coloured Plates, representing full-length figures of Chiefs and other personages in their respective Costumes; from Paintings by R. B. M'LAN, Esq.; with descriptive Letter-press, by JAMES LOGAN, Esq., F.S.A.Sc. It will be completed in Fifteen Numbers (six of which are out), price 12s. each. A few copies, imperial folio, price 21s. each part.

**THE LADY'S ASSISTANT in KNITTING and NETTING.** By MRS. GAUGAIN. Vol. 1st, price 5s. 6d. Vol. 2nd, price 10s. 6d.

Ackermann and Co., 96, Strand.

**FRESCO-PAINTING.**—J. BARNARD begs to inform his Friends and Artists generally he has at his Artists' Repository, 339, Oxford-street, Lathes, Sashes, with Mortar, Intonaco, Colours, Brushes, Palettes, and every other requisite for the above Painting, prepared by the direction of Mr. Aglio. Also Aglio's White, Lake, and Green, prepared by himself. Prepared Canvases for Frescoes may be had on notice being given. J. B. has introduced a Papier Maché Palette, which is adapted for oil or water, being very light and pleasant to hold.—N.B. His fine White for Oil-painting is still unequalled.

Just published, to be continued every alternate Month,

THE SECOND NUMBER OF

## THE BARONIAL HALLS, PICTURESQUE EDIFICES,

AND

ANCIENT CHURCHES OF ENGLAND;

FROM DRAWINGS MADE EXPRESSLY FOR THE WORK BY J. D. HARDING,  
AND OTHER EMINENT ARTISTS.

The whole executed in Lithotint, by Mr. HARDING, with descriptive Letter-press, and numerous Engravings on Wood.

EDITED BY S. C. HALL, F.S.A.

### MODE OF PUBLICATION.

The size of the Work will be Imperial Quarto; and its production will be in all respects commensurate with the importance of the subject and the advanced state of the graphic and typographic arts. Each Part will contain Three Subjects, executed in LITHOTINT—the patent invention of Mr. Hullmandel—a method peculiarly suited to such a publication, as combining accuracy of detail with brilliant artistic effects, and having also the advantage of novelty.

Woodcuts, when desirable to elucidate the text or to convey accurate ideas of striking details, will be scattered through the letter-press, which will consist of Twelve pages—sufficient, it is believed, to furnish all necessary information to the general reader.

PRINTS. Imperial Quarto . . . . . Five Shillings.  
PROOFS. Columbian Quarto . . . . . Seven Shillings and Sixpence.  
PROOFS. On India Paper. Imperial Folio. To range  
with "Nash's Mansions," and other Works of the  
same size. As only Seventy Copies of this Edition  
are printed, an early Subscription is necessary  
[The Publication will be strictly limited to Twenty-four Parts.]

#### PART II. contains

PENSHURST, FROM THE PARK, } KENT. . . . . J. D. HARDING.  
PENSHURST, THE COURT YARD, }  
BLICKLING HALL, NORFOLK . . . . . J. D. HARDING.

#### PART I.

COBHAM HALL, KENT . . . . . J. D. HARDING.  
COBHAM CHURCH, INTERIOR . . . . . J. D. HARDING.  
WEST-STOW HALL, SUFFOLK, from a Sketch by . . . . . W. MÜLLER.

In One Volume, post 8vo., price 7s. 6d. cloth,

## A MANUAL OF FRESCO AND ENCAUSTIC PAINTING,

Comprising ample Instructions for carrying on all the Operations connected with these Arts, with an accurate description of the methods employed, and the colours and other materials used for these purposes by the most eminent Artists of ancient and modern times.

By W. B. SANSFIELD TAYLOR,  
Curator of the Living Model Academy.

### NEW CHRISTMAS BOOK BY MR. DICKENS.

In December will be Published, in small Octavo, bound in cloth, gilt edges, with Four Coloured Etchings and Woodcuts by LUCAS,

## A CHRISTMAS CAROL,

In PROSE.

Being A GHOST STORY OF CHRISTMAS.

By CHARLES DICKENS.

Price Five Shillings.

LONDON: CHAPMAN AND HALL, 186, STRAND.

### ANATOMY APPLIED TO THE FINE ARTS.

**J. HENRY ROGERS, Esq.** (Lecturer at the Middlesex Hospital School), will deliver his second course of LECTURES on the above subject, illustrated by recent Dissections and Living Models, at the Artists' Society, Clipstone-street, Fitzroy-square, early in January, 1844.

By permission of the Members of the Society, a limited number of Tickets for the course will be issued. For prospectus and terms, apply to Messrs. Winsor and Newton, Rathbone-place; or to the Hon. Sec., Jos. J. Jenkins, Esq., 8, Caroline-street, Bedford-square.

**SCHOOL OF ART, No. 6, CHARLOTTE-STREET, BLOOMSBURY.**—This School, established and carried on many years by Mr. SASS for the EDUCATION of ARTISTS, and the Instruction of Amateurs in Figure and Landscape Drawing and Painting in Oil and Water-colours, Modelling, Etching, &c., possessing every requisite as a Probationary School for the Royal Academy, is now conducted on the same principles as heretofore by Mr. F. S. CARY, with the aid of Mr. REDGRAVE, A.R.A., who is engaged as Visitor.

The Studios contain an extensive collection of Casts from the Antique, Drawings, Works of Art, and Folios of Prints from the Old Masters.

\* There is a separate Establishment for Ladies.

Mr. F. S. CARY may be spoken with from nine till eleven, at the School, where printed particulars of the terms are to be had.

**NOTICE TO PAINTERS, SCULPTORS, and ENGRAVERS.**—The ATELIER, 14, Upper St. Martin's-lane, for the study of LIVING MODELS, is Open every evening. The Studios commence at Six o'clock. Artists or Amateurs desirous of becoming members, are requested to address a note to the Curator, at the Atelier. The half yearly election for members will take place on Monday the 18th inst.

W. B. SANSFIELD TAYLOR, Curator.  
December 1.

**DISEASED AND HEALTHY LIVES ASSURED. MEDICAL, INVALID AND GENERAL LIFE OFFICE, 25, Pall Mall, London.**—CAPITAL, £300,000.—This Office is provided with very accurately-constructed Tables, by which it can Assure Diseased Lives on Equitable Terms.

The Extra Premium discontinued on restoration of the Assured to permanent health.

Increased Annuities granted on unsound Lives, the amount varying with the particular disease.

Members of Consumptive Families assured at Equitable Rates.

Healthy Lives are Assured at lower rates than at most other offices.

Policies of twelve months' standing are not affected by Suicide, Duelling, &c.; and Assigned Policies are valid from the date of the Policy, should death ensue from any of these causes.

Loans granted on Personal Security.

F. G. P. NALSON, Actuary.

Preparing for publication,

**AN HISTORICAL and PICTURESQUE GUIDE to the BLACKWATER, in MUNSTER.** By J. R. O'FLANAGAN, Esq. Illustrated by numerous Engravings, price 12s. A few copies on Large Paper, price 21s.

Subscribers' names received by the Author, 54, Blessington-street, Dublin; and by Mr. How, the publisher, Fleet-street, London.

**THE YORKSHIRE FIRE and LIFE INSURANCE COMPANY.** Established at York, 1824, and Empowered by Act of Parliament.

Capital, £500,000.

#### PATRONS.

The Archbishop of York  
The Marquis of Londonderry  
Earl Fitzwilliam  
The Earl of Tyrconnel  
The Earl of Zetland  
The Earl of Yarborough  
The Bishop of Ripon  
Viscount Morpeth  
Lord Wharfedale  
Lord Feversham  
Lord Hotham, M.P.  
Lord Howden, K.C.S.K.  
Lord Wenlock  
Lord Worsley, M.P.  
Hon. E. R. Petre  
Sir G. Strickland, Bt., M.P.  
Sir Francis Lawley, Bart.  
Actuary and Secretary—Mr. W. L. NEWMAN, York.  
London Agent for the Life Department—Mr. EDWARD HENWOOD, 46, Watling-street.

The attention of the Public is requested to the terms of this Company for LIFE INSURANCES, and especially for FEMALE LIVES.

Extract from the Table of Premiums for Insuring £100.

Age next birth-day.	Male.	Female.
10	£1 7 6	£1 5 4
30	2 5 0	1 19 9
50	4 1 9	3 13 3
70	10 0 4	9 7 6
80		15 12 10

Fire Insurances are also effected by this Company, on the most moderate terms. Farming Stock Insured without the Average Clause.

Prospectuses with the Rates of Premium and every information may be had at the Head Office in York, or of any of the Agents.

Agents are wanted in those Towns where no appointments have been made.

**ARGUS LIFE ASSURANCE COMPANY,**  
39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 and 6 Will. IV., c. 76.

Thomas Farncomb, Esq., Alderman, Chairman.  
William Leaf, Esq., Deputy-Chairman.  
William Banbury, Esq.  
Edward Bates, Esq.  
Thomas Camplin, Esq.  
James Clift, Esq.  
Rt. Hon. J. Humphrey, M.P., Lord Mayor of London.  
Rupert Ingleby, Esq.  
Thomas Kelly, Esq., Ald.  
J. Filcher, Esq., Sheriff of London & Middlesex.  
Lewis Pocock, Esq.

Physician—Dr. Jeaffreson, 2, Finsbury-square.  
Surgeon—W. Coulson, Esq., 2, Frederick's-place, Old Jewry.

Consulting Actuary—Professor Hall, of King's College. Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.  
In addition to the subscribed Capital of £300,000, the assured have the security of the Company's Income of nearly £60,000 per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One third of whole-term Premiums may remain unpaid at 5 per cent. compound interest as a debt upon the policy for life, or may be paid off at any time without notice.

In assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before two o'clock.

EDWARD BATES, Resident Director.

## THE NOMENCLATURE OF PICTORIAL ART.

## PART IV.—EXECUTION.

SIR,—The subject of this paper would appear to many, and has been pronounced by many, to be a matter of small moment in Art. That it does not hold a position equal with many others is quite evident, though it is possible to underrate even Execution—handling, pencilling, or by whatever other term it may be named. As a part of a picture, however, it must have its value, which will be either augmented or depreciated, and its general character and expression elevated or debased, by the appropriate or inappropriate manner in which the execution is conducted.

There are structural differences in the hands of individuals: it shall be left to the physiologists to determine whether they exist in the bones, the muscles, or the nerves—I should think the latter—which determine to some particular style of manipulation, while they as effectually preclude the acquiring another in any way wide of it: a modification of the ruling mode can only be accomplished, and that by incessant practice. That painter, therefore, is a happy one whose natural mode of execution associates closely in character with his subjects; and it may be no less in the difficulty of training the hand to a novel manner, than in training the mind to a new line of ideas, which presents the bar to one man's painting in several styles with anything like the success he may command in painting in one. If reasoning by negations be allowable, it may be said that the success of the old masters of eminence resulted mainly from their undivided attention to their one style. D. Teniers the younger, in his 'Pastios,' is instanced as an exception to this rule;

but he who cannot at once see through the imitative grandeur of those pictorial discrepancies, far enough to discover in them the tricky flippancy of the versatile Dutchman, must not boast of his penetration, though he may still admire the actual beauties to be found in such performances.

Our hands are somewhat like our horses: some run away with us, and are mischievously dexterous; while others move but lazily and clumsily, and are perversely docile. You may manage, by curb, to check the speed of the first, while he defies you to look grave, by his elegant curvettings; and you may press the other to something like a pace, though he tumble in the attempt.

Thus it is with hands, and their executive pranks. Some, in a short time, acquire involuntary precision and dexterity—enough of themselves to mar the sober grandeur of the "high pastoral," the savage, or poetic; and others are of so massive and ponderous a movement, as to preclude the creation of anything light, elegant, or beautiful.

Complete and single impression must always, in some measure, fail that picture in which the leading character and expression are not supported by a congenial mode of execution.

This position may find useful illustration in another art (that of music), in which the proprieties—it must, I think, be acknowledged—are kept more steadily in view than in painting.

The executive artist may find, in the business of the Italian Opera House, more sound instruction than in the studios of most painters, or the picture galleries of most nations, with the addition of this advantage,—that using colour, canvas, and brushes instead of an orchestra, there would be little chance of his becoming a coispet.

Correct, vivid, and varied passion is the only ennobling part of either art; the only part of either art in the production of which is required the highest intellect, and to which is justly paid the greatest homage, that of the complete enthralment of the human sympathies—the subliming of the affections—the elevation of the passive to high rectitude, and the consummation of courage in heroism. Before an exhibition of tender pathos (either in an opera picture, or one of canvas and colours), witness how the sternest features gradually relax into an expression of comparative benevolence. This is no less produced by the incident itself, than the thrilling smoothness of the accompaniment; nor could a painting of a similar incident be expected to so thoroughly move a spectator, if the accompanying execution were not conducted upon similar principles, and ruggedness as well as rapidly avoided.

Again, if an uncompromising and rigid time, strongly pronounced by firm touch and intonation, did not accompany a passage of a determined and inflexible character, that erect front and proud look, so often seen to animate the whole attentive part of an audience, would not result; and the absence in a picture of this necessary and appropriately rigid execution as an accompaniment to a similar character of incident, would leave it short of the power to raise a similar feeling in its possessor.

In passing onward to the more violent emotions, it will be found that music (speaking generally) adopts a style of execution more congenial to the passion under exhibition than does painting. Pictures of battles, of storm and tempest, are frequently seen, and that by acknowledged great masters, in which the execution is of the sweetest character possible; while perhaps no one opera could be alluded to in which a violent burst of emotion, such as despair or frenzy, is not accompanied by some wild and harrowing harmony, and executed in the perfectly hurried spirit of the catastrophe. This is sometimes felicitously done in painting as well as the drama, in their highest achievements; and the effect is freely recognised by that part of the human family who have souls for the enjoyment of either, and they are fortunately a large proportion of the whole race; the exceptions are few, and our business lies not with them.

Upon looking at the discrepancies of executive Art, it may strike some as strange that they should so long have continued unnoticed. But no;—painting and its philosophy do not even yet occupy sufficiently the attention of society, or the result would be by this time of a different character; and the art, with its apparently intricate machinery, would be as much a matter of study

as it is undoubtedly an enjoyment of the present age.

Passion, on the contrary, is the light and shade, the sunshine and the tempest of every man's life; and its feeling in himself, as well as its exhibition by others, is fully and correctly appreciated. Language is its principal medium; and is, in its execution or delivery, capable of being scrupulously weighed as to its propriety or impropriety by nearly every individual of our species.

Thus the delivery or execution of the language naturally resulting from a particular passion, may receive correct criticism from nineteen persons out of twenty; while the executive proprieties of a painting exhibiting the identical passion, would receive but a very sorry criticism indeed from more than one out of the same twenty individuals. Perhaps it is that, not being a necessary of life, pictorial art may be considered a gratuitous enjoyment; and, upon the principle of not "looking a gift horse in the mouth," it has escaped a scrutiny and consequent criticism that may be felt as ungenerous.

If progression in a school of Art be at all a desideratum, as it undoubtedly is—and if any danger be involved in the admission, upon principle, of error, however small—it is highly incumbent upon the painters of our own school to, at any rate, weigh thoroughly the proprieties of executive art. If it should be found valueless as a pictorial constituent, discard at once its consideration, and let us have in future, as the case may happen, storms and inundations painted in the soft and winning tones of Metzu or Vanderwerf. Let the stern old ruin rise against velvet skies in all the beauty of polished ivory, shaded with pearl; while, for flower pieces and scenes of the drawing-room, let some few Caravagios rise anew, and with impetuous daring, hurl their elegant and minute beauties over the rugged canvas of six threads to the inch. To improve upon this, keeping the same principle in view, use a vehicle which will admit rising colour "pile upon pile," and verify a sarcasm of the French, who call—and not very inappropriately—this style the "brick-and-mortar style" of painting.

The strong, straightforward reasoning character of the present age, however, is not likely to run into these extremes; but between such extremes, and the utmost possible characteristic truth of execution, there are innumerable chances of failure; while that one in which may exist the most expression is difficult to achieve, as it must necessarily change with every distinctive line of subject involving passion—varying between the impetuous and quiet, the firm and vacillating, the sublime and puerile.

To imagine a sliding-scale of execution, as well as colour and light and shade, which should associate characteristically with those expressions, would not be difficult, as it has been done in some instances; and those fortunate instances weighed against works executed with less discrimination, at once substantiate the necessity for, and give the commencement to, a scale of EXPRESSIVE EXECUTION.

It would be a great pleasure to allude to some few examples of this successful adaptation of manner to general expression amongst our own painters; and I feel somewhat trammelled in not having the liberty to do so, as that which yearly comes under our observation, under delicate modifications, but emanating from uniform and impulsive imaginations—alive to truth in its strictest application to an intricate art—would be of the utmost value to the student in the same great and liberal school of nature, from which the resources are all drawn, of these great men of our own times.

At the same time that it is gratifying to contemplate those works, whether of the dead or the living masters, in which the point of perfection has been nearest approached, there is some strong doubt that they teach so much as those, on the contrary, in which the point, though kept strongly in sight, has been palpably missed. Thus, while a chart merely indicates by a dotted line the safe course for a ship, it has been thought necessary to mark strongly and precisely the positions of danger. The waters of Art are numerous sprinkled with those dangers, many of which are sunken and out of sight; and to mark them strongly and precisely is quite as much a matter of necessity, as to indicate by a dotted line of argument or persua-

sion the shorter course to excellence. It is to our errors, and perseverance after excellence, that must be attributed our successes, as, when discovered, the impression is stronger than that which follows the discovery of wrong in another: hence the proverb, "The wise err once, the foolish often."

It will be necessary while on the subject of execution to detach from the mind all idea of finish or unfinish, as it does not necessarily involve either the one or the other. This will be readily allowed upon reference to some styles of execution which, though rough and energetic, are elaborately finished, such as those of the late Constable, and Rembrandt; and to others which, though smooth and polished, are destitute of elaboration, except as to surface.

Perhaps in landscape-painting no more felicitous manner could be cited than that of Claude, taken, of course, in conjunction with the subjects he chose, and the particular character and sentiment with which he so highly imbued them. This has frequently so forcibly impressed itself upon my mind, when examining the works of this great master of the "high pastoral," that it seemed impossible to select from the executive manners of all the other landscape-painters, one which might be substituted for that of Claude, without a serious deterioration of the beauties of his works. Either one would be too dexterous or another too clumsy, one too daring and comprehensive or another too feeble and dilute.

The strength of Claude (executively) did not certainly lie in his dexterity or power over the pencil, which seems to have obeyed his hand but tolerably well, but in his high and undeviating sense of propriety. And it is not difficult to imagine that, had Claude commenced painting as a boy instead of at 30, his dexterity at middle age had eclipsed or run away with one-half of the beauties which are now left more to themselves, and play a considerably more conspicuous part, along with the unpretending and occasionally halting execution which happily accompanies even his finest works.

There is strong evidence again in Claude's work, that he did not harass either himself or his pictures with any of the very tenacious vehicles. Oil in some state or another, with a dilutant, would appear to have formed the stock of that part of his studio, which in that of a modern painter is crowded with varnishes, gilps, gumptions, and twenty other more or less mischievous addenda. A portion of a picture laid in by Claude would appear to have remained in a tolerably plastic or miscible state for a length of time, enabling him to enter it with light or with dark at pleasure, and at a gentlemanly pace, moulding it into a chosen form, and elaborating some select and high impression of nature, without hurry or anxiety. Thus the imitation of high nature alone was slowly and certainly working out, free from the impediments and flurry of mind necessarily involved in the use of more tenacious and rapid vehicles, which having beauties of their own, and requiring rapid execution, the vehicles and execution unavoidably obtrude themselves, and become the anxiety if not the object of the painter.

A late writer upon Art called water-colour painting the poetic wit of Art, and oil painting the reasoning prose: the character of the one, and its dashing and dexterous execution being induced by the rapidity of its drying, and the matured and elaborate character of the other by its slowness; but by increasing the rapidity of the drying in the oil vehicle, it is reduced at once to very nearly the character of water colours.

Claude had not, nor would appear to have coveted this wit of Art; it was incompatible with his high and poetical sentiment: and the object of thus introducing the subject is to suggest, that the general impression of his style would have languished under its influence, or that of a mode of execution more showy or dexterous than the one he has in his own high sense of the proper—his genius—given us.

Most of the copies of Claude's works may be detected by their execution, which is of a too precise, dexterous, or certain character, and their want of depth: that is, the work is too much on the surface alone.

His imitators have failed in apparently having thought that the same kind of scenes, with their appropriate expression, may be improved by a more facile and elegant manipulation; but, in

gaining elegance, expression and dignity have been lost in most instances. What is generally termed the executive in painting, is as inapplicable to the pictures of Claude, and works conceived in the same high tone of mind, as would be the gait and air of the dancing master or *petit maître*, to the poet or philosopher; and a statesman might as well expect to gain character by entering a legislative assembly with a hop, step, and jump, as a painter to improve the expression of a work of high pretensions, by a style of execution in which the elegancies or facilities of manipulative art might be carried far enough to obtrude themselves even in the least degree upon the attention.

As an instance of the difficulty of grafting even acknowledged beauties upon high excellence, although attempted by first-rate talent, perhaps no more signal instance can be quoted than the endeavour of Tintoretto to add the grandest style of colour then known to subjects of the same character with those of the towering Michael Angelo. Masterly and daring execution was as much the forte of Tintoretto as colour; and perhaps its consequent obtrusiveness, as much as the uncongenial colour, precluded success.

Another instance of discrepancy between subject, sentiment, and execution, useful to contemplate by the yet informed manipulist, occurs in the works of the landscape painter Melé. In many respects they are thought to be equal to those of Gaspar Poussin. Some of them hang in the galleries of the unknown (*unfeeling*) as the productions of Poussin himself, and are separated from them by their executive precision alone, which is at complete variance with their general sentiment. Whether the error lay in the taste of Melé, or that his hands ran away with him, cannot be easily determined; but the result is a most useful lesson; and the estimation of the connoisseur for the two classes of work is strongly indicated by the circumstance, that a Melé of two feet may be purchased for perhaps thirty pounds, while a Poussin of the same size may fetch two hundred.

The battle pieces of Wouvermans may be instanced as failures, executively. We are fascinated with the painting of them—their beautiful colour, their easy and correct drawing; but both the execution and colour will be at once felt by many to be at variance with the expression of "the tug of war." The subject cries out horror, and the execution and colour, beauty; and the mind being divided between the two alternating sentiments, fails in receiving its full draught of one absorbing passion.

The execution of the gorgeous Rubens is no less at variance with his subjects of terror and deep tragedy, than congenial with those of a hilarious and triumphant character; leaving out of the question the splendour of his colour, and the complicated correctness and truth of his harmony, to which all have bowed, and perhaps ever will bow, a delighted homage.

As a mean style of execution, which would appear to be as nearly applicable (as any individual style may be) to subjects either of the tender or sublime, that of Titian stands pre-eminent. The reason of this lies in its perfect unobtrusiveness—an unobtrusiveness which never descends to weakness, and never blusters out, as it were, in advance of the interest of the incident, nor disturbs the peculiar feeling with which he chose to invest his subject.

Our National Gallery possesses one picture which in a pre-eminent degree displays the advantage of a style of execution in complete unison with the sentiment of the subject—'Venus and Mercury teaching Cupid,' Correggio; and, notwithstanding the comprehensive character of the style of Titian just alluded to, it must be acknowledged that the full tenderness of this, transcends in some degree of appropriateness anything that could be expected even from the great Venetian. The admirably disguised care and elaboration devoted to the figures, with the almost celestial polish of the Venus, and the slightly increased freshness and brisk vitality of touch conspicuous in the Cupid, are sufficient to wrap this delicious work within the inmost folds of one's pictorial affections. This is a picture at once to warm one's heart by, and create afresh a long since worn-out love of mythological subjects.

It is a principle entertained by some, and practised by a great many (and particularly by

landscape painters), that every object, even in one picture, should have a different character of execution; and, accordingly, skies and the more aerial portions of some works have been painted extremely smooth; while objects near the eye, such as barks of trees, rocks, and old wood work, have been loaded with colour to a perfect ruggedness of surface. This is an excess of a manner which, in moderation, may have its advantages; but, carried thus far, it is no less an instance of false taste than was the practice of an amateur actor who, when in his speech, coming to the word heart, placed his hand on that organ, and so on with the other parts of his body. And if the analogy hold good, and the practice of roughing and smoothing when carried to an unlimited extent be not equally reprobated, it is that the knowledge of painting has not progressed equally with the taste for the drama.

Textural variety cannot, with propriety, be carried very far in one work, the object in which is to realize one strong impression; slight modifications only will answer the purpose infinitely better, and leave undisturbed the general character aimed at. Imagine, for an instant, Correggio, in the picture just alluded to, to have given to the figure of Mercury—for the purpose of marking strongly the difference between him and the Venus—a texture similar to what Caravaggio might have given to a similar character, and it will be felt at once, that more would be lost in the general expression of the picture, than would be gained by any greater dissociation of the two characters. If the sentiment of a picture be beauty, and smoothness of texture or execution be chosen to augment it, the greatest possible roughness is inadmissible in the same work, even in a small quantity, and for the purpose of identifying particular and individual character, and *vice versa*.

It is, notwithstanding, in comparatively small works in which the executive proprieties—beauties—are demanded, as paintings may be conducted on so large a scale as to preclude any critical observation of textural character. Thus we have, in this country, many pictures of large dimensions in which the texture is as smooth as would be required for cabinet and easel paintings; but when a work, from its size, requires a close inspection, this lower constituent of Art demands, necessarily, the utmost care and the greatest possible propriety; as though of itself it cannot make even a tolerable picture, its neglect or misapplication may mar an otherwise fine one.

I am, Sir, your obedient servant,  
J. B. PYNE.

Walham-green, Fulham.

#### DECORATIVE ART IN GERMANY.\*

By C. H. WILSON, Esq., of the British School of Design.

THE general promotion of taste is an object of great interest and importance, and materially affects our commercial prosperity. We find it asserted, on authority which cannot be questioned, that the principles of taste, as applied to manufactures, are better understood on the Continent than with us; and the subject has been deemed of so much importance that parliamentary inquiries have been made into the causes of our inferiority, which inquiries have been followed by active exertions on the part of Government to promote improvement of taste amongst the manufacturing classes, by the establishment of Schools of Design in London and elsewhere, also by the passing of a Copyright Bill, by which an effort has been made to protect the authors and proprietors of novel designs from the piracy which has been so injuriously practised.

There can be no doubt that these measures are important steps, and must tend to promote the objects which those who originated them had in view; but we must not rest here,—we must do much more than has yet been done, or perhaps ever con-

\* A paper—of which the following is an abridgment—has been communicated by Mr. Wilson to the Royal Scottish Society of Arts, and is published entire in "Jameson's Edinburgh Journal." It is entitled, "Observations on some of the Decorative Arts in Germany and France, and on the Causes of the Superiority of these, as contrasted with the same Arts in Great Britain. With Suggestions for the Improvement of Decorative Art." The document is equally interesting and valuable; and does honour to the author.

templated, before we can hope to meet our neighbours without disadvantage in the display of taste. We must not only, as they do, teach principles of good taste in Schools of Design, and defend honest men from the piracy of knaves, but we must also, as they do, form and throw open to our people extensive Museums of Art, employ the painter and the sculptor to complete the edifices which are raised by the skill of our architects, call in the aid of the Fine Arts in commemorating the glories of our country, and unite the labours of the artist with those of the historian.

We must, I think, attribute the superior taste which our neighbours exhibit in their manufactures and decorative arts,\* in a great measure to the advancement which they have made in the Fine Arts. I have been unable, in speaking of the former, to omit allusion to the latter, and I do not wish to separate them. The divorce which in our day and amongst us has taken place between Fine Art and Ornamental Art has been in many instances fatal to the latter, and certainly has been of no advantage to the former. It has indeed been asserted that taste in manufactures has nothing whatever to do with the state of the Fine Arts, but the whole history of Art proves the reverse of this proposition; and while there can be no reasonable doubt that many of those decorative arts which are more immediately connected with Fine Art rise and fall with it, so do I not doubt that every manufacture where taste can be shown, however apparently unconnected with Fine Art, is influenced by its actual state. It will hardly, I think, be denied, that on taste in architecture depends that in house-painting, in furniture, and in iron-work. In every age the forms and ornaments which have been used in these arts have been in accordance with the architectural taste of the time, and, in fact, we can at a glance tell to what period an old piece of iron-work or carving belongs. I have said that a divorce has taken place between Fine and Ornamental Art, and in the medley designs of our house-painters, cabinet-makers, and smiths, the unhappy effects are sufficiently discernible. Assuredly, some centuries hence, should the works of our artisans survive to such a period, they will puzzle the artist and antiquary of those days to decide to what age they belong.

The majority of modern architects leave their works to be completed by the house-painter, and, I may add, the upholsterer and smith, for a house cannot be said to be complete till these artisans have worked in it and for it.

If the house be Greek or Italian in architectural style, most house-painters on being consulted will recommend its being painted "à la Louis XIV.;" if Elizabethan, they will still warmly advise the Louis XIV.; and if Gothic, they will advocate the same style. The upholsterer thinks of no style at all, neither does the smith. I am not, indeed, aware that either is ever called upon to furnish a house in accordance with its architecture; such a thing is never, or, at any rate, rarely, and then only very partially, thought of. We shall see, in the course of my observations on foreign buildings, whether such is the case in these.

That a house should be painted in any style but that of its architecture is preposterous; we acknowledge this at times in the completion of public or religious buildings. Why should it not be the universal rule? for certainly furniture might be made as comfortable as modern habits require, and still be in harmony in point of form and taste with the edifice. What a charming variety would thus be attained! \* \*

I repeat that I cannot omit all mention of Fine Art, although the present paper bears a title which might authorize the supposition that I intend to confine myself exclusively to descriptions of Arts which, according to our present mode of thinking, have no connexion, or, at any rate, a very slight and distant one, with the *Fine Arts*. As I mean to endeavour to show that the contrary is the case, I shall briefly touch upon the state of our School of Art, and offer a few observations upon the state of taste in this country. I shall then glance at the state of Art in Germany and France, and contrast the system adopted in those countries for the en-

couragement and employment of Art with that followed in ours.

The artist in this country has thus two great evils to contend with: in youth, the want of the means of education; in manhood, the want of proper and well-directed patronage. Private patronage can create a very excellent School of Art, but it cannot create what we term a great school. We must have that of the State, and also that of Municipalities: I would willingly add, also, that of the Church. I am certain that, if the State finally patronises Art (and I am thankful to think that there is now a certain prospect of its doing so), our municipalities will follow, and do so also. We should then see our artists called upon to design, not only great historical works, but also works which would bear more directly on mere ornamental art, than the production of pictures alone can possibly do, and which would, therefore, tend to its improvement; and, as I hope to show you by my subsequent observations on foreign Art, whilst the artist would profit in every point of view by such employment (his field of study, for instance, would be greatly extended, which would unquestionably tend to the general improvement of Fine Art), the position of the ornamentalist would also be greatly improved; more ability and cultivation would be required in his department; and, as juster ideas of Art would soon prevail, young men would not so readily esteem themselves fit to be artists, as they do now on very slender grounds, but would continue in departments of Art which would offer them secure subsistence, rather than embrace the miserable and hopeless career of the mediocre artist.

In my late continental tour my express object was inquiry into certain processes of painting; but although much occupied with these, I still had time to give a passing glance to other interesting subjects so closely connected with the particular objects of my journey that I had merely somewhat to extend my observations partially to embrace these also.

The King of Bavaria is the greatest patron of Art now living, and in his capital we may see numerous proofs of the results which a well-directed patronage of the Arts can produce. The Bavarian artists now enjoy an European reputation; but it is much to be regretted that the zealous praise of some of their admirers amongst ourselves has raised a feeling in some of our artists, which displays itself in *discreditable* abuse in those journals, the pages of which are particularly devoted to Art;\* thus, we have on one side an admiration which, although just, is too exclusive, and on the other, criticism which is intemperate and ungenerous.

No comparison whatever can at present be instituted between the leading artists of Germany and those of this country: when our artists are, like the former, employed to paint national monuments, then we may institute a comparison, but, at present, none can with justice be entered upon. To paint a single historical work, however large it may be, is one thing, but to paint a series for a particular building is quite another: it is possible that an artist may succeed in the single picture, yet fail in the series. Where a comparison can fairly be instituted, and that is between the cabinet pictures, landscapes, and portraits of our school and of theirs, I think that it cannot be doubted that, in many respects, our artists have the advantage, and we may entertain a warm expectation of success when they are called upon to execute works of equal magnitude and importance with those of their continental brethren.

The King of Bavaria has resolved that his capital and dominions shall contain monuments to rival those erected by the magnificence or piety of former days, and he has to a wonderful extent succeeded in his object.

The manner in which his Majesty meets his artists is interesting, and offers, I think, a useful lesson to our amateurs. When he has resolved on the erection of a new church or other important edifice, he summons an architect, painter, and sculptor to his presence, and explains his wishes to them either separately or together: when the plans are ready, the artists again meet their sovereign,

and a council is held over them; he encourages them freely to express their opinions, even when contrary to those expressed by himself. When everything is thus at last decided upon, the work is commenced and goes on without interference; and, should any part of it prove less successful than was expected, there are no reproaches, for the King at the previous council took his share of responsibility.

It will be easy to conceive that such a monarch is spoken of with devoted attachment by the men he thus employs, and that he is served with enthusiasm. Many express surprise that the King of Bavaria should have been able to carry on and complete such varied and extensive works, when it is known that the resources of his kingdom cannot be very great; but he is aided by the devotion of his artists, who accept of moderate sums for their labour; many of them will leave immortal names, but few of them indeed will leave fortunes.

I beg that it may not be thought by these expressions that I am of opinion that Art should ever be poorly paid. I hold a very opposite opinion; it ought to be well paid, but not extravagantly, as some seem to think. I regret to think that, in our country, public undertakings are so frequently viewed by individuals employed in them as sources of immense emolument; hence an outcry, hence opposition to every undertaking that is not of the most utilitarian character, and the apprehension of extravagant cost frequently deters from many undertakings that would be beneficial to Art.

I admire the Bavarian artist who is content with the emolument which his King can afford to give him, and who undertakes works at a moderate price for the love of Art and the honour of his country; and this spirit prevails amongst all who are employed—amongst artisans as well as artists. The Chevalier Klenze, the King's principal architect, informed me that the operatives bestowed so much time and labour upon everything that they undertook for the King, that in the earnest desire to make their work as perfect as possible, they seriously impaired their profits. These are interesting facts, and assist, at any rate, in explaining how so many works are done, and so well done.

The tendency of the Germans in Art has been much misrepresented in this country; and we have heard it repeated, "*usque ad nauseam*," that they are mere imitators of the very early masters. This is not true. I shall not enter at large upon this subject, but beg to refer you, for what I believe to be a true view of it, to Mr. Eastlake's admirable paper at the end of the last report of the last Parliamentary Committee on the Arts.

In Architecture, I am not disposed to consider our friends so favourably: there is much genius evinced in their productions, their conceptions are great, and magnificent works are undertaken, and brought to a successful termination, but their talent is chiefly shown in very direct imitation, and that imitation is not always discriminating: there are many very tasteful revivals of the middle age Tuscan, of the restored Italian classic, of the Byzantine and Romanesque; but, at the same time, there is also a revival of the principal defects of the Italian architects; and I do not think that much judgment is always shown in the choice of a style. The famous Ludwigstrasse is wholly ineffective as a street; the style of most of the buildings is that of the fortress palaces of Tuscany, and the imitation is not at all times successful. The material, however, is excellent, and so is the workmanship; the details are generally in beautiful taste and admirably executed; and the decorative completion of the buildings is ever in a style of great magnificence.

The few attempts in Gothic are coarse, and almost entirely devoid of all true Gothic feeling; and it is remarkable that the details which, in edifices in other styles, are better than the general designs, are, in the Gothic attempts, very indifferent and inferior to the conception of the mass.

I do not think that the Bavarian School of Sculpture has any very high claims to excellence. The word *clever* seems to me the most applicable to the works which I saw at Munich. There is no want of employment however. In the new throne-room of the palace, there are twelve colossal portraits of ancestors of the king, in gilt bronze; the Tympana of the Walhalla, the Glyptothek, and portico opposite,

\* "By decorative and ornamental art," says Mr. Wilson, "I mean that art which is not usually classed by us with Fine Art. Neither the expressions nor the distinction are correct; but, as I must make a distinction, I use these phrases for want of more appropriate ones in our vocabulary."

\* Upon this subject we shall break a lance with Mr. Wilson ere long. The remark is utterly unfounded. At least it can refer only to the structures of one British artist, and to the observations we have thought it our duty to offer.

are filled with statuary; and I might mention much besides; but the most extraordinary undertaking of all is a statue of Bavaria now modelling, and which is to be cast in bronze. It seems to be about fifty feet high; and I saw several young sculptors perched on different parts of it, or slung with ropes, chipping away at the plaster of which it is formed, and shaping it with small pickaxes as substitutes for the usual modelling tools.

Whilst the Fine Arts in Munich are flourishing, the decorative Arts which are connected more immediately with them are in a very advanced state. The house-painters of Munich are excellent artists, and paint cleverly in oil, fresco, encaustic, fresco secco—a peculiar art imported from Italy, and in common distemper. The reason of this ability and advancement is evident. The arabesques and ornamental painting in the palace are all designed and executed by eminent artists, and so it was in the best ages of Art. Thus, an example of fine designs, correct and appropriate taste, and excellent execution, is set to the mere decorative painter, many of whom, indeed, are employed as assistants, and thus study their art under the most advantageous circumstances. The reason of our inferiority in this department is thus rendered evident, and all efforts to place ourselves on the same level with these artists will be vain, till we see the same system adopted.

The execution of ornamental architectural details at Munich is also excellent; there is no art in which we are more deficient than in this, as is sufficiently evinced in the hard, stiff, and lifeless character of our architectural ornamental details of every description.

Metals, also, are wrought with great taste and skill; and in ornamental work, attention is paid in the design to the *nature* of the material, which is too much neglected by our designers, amongst whom forms borrowed from those of stone-work are generally used in iron.

I purchased, for the use of our School of Design, a number of examples of ancient iron-work, made in the workshops of Nuremberg, and which unquestionably excel both in taste and in workmanship the boasted productions of our day. It is perhaps impossible to restore, for all purposes, the old modes of working iron; but although we must submit to the trammels of casting processes, yet in designing even for these, just principles of design may be introduced, by paying more attention to the nature and capabilities of the material.

I now beg to call your attention to another important art which has been restored and is practised with much success in Munich—I mean that of glass-painting. Before entering upon a description of it, I would beg such of you as have seen them to recall to your memories the noble specimens we possess in some of the cathedrals and ancient churches in the south; I would mention the fine windows of Cologne Cathedral, but especially those of St. Lawrence in Nuremberg, in which church the Volkamer window may be mentioned as, in all probability, the finest in the world. The art has never been lost in Nuremberg, and I am happy to show you a copy, by the best artist of that place, of a portion of the Volkamer window. You observe that we have here a figure of St. Catherine, admirably drawn, and she is placed over a Gothic pattern or ornamental design, which runs through the greater portion of the window behind the figures. You have here a specimen of the true system on which such subjects on glass should be designed. These should be treated in a conventional manner; no attempt should be made to represent nature, as we do, for instance, in a picture, as thereby the idea of a window is immediately destroyed; many of you who have seen it must have been struck with the bad effect produced by this mode of painting a window, as seen in St. George's Chapel at Windsor. Notwithstanding the just criticism with which these have been assailed, glass painters, both in the south and amongst ourselves, persist in copying pictures for such purposes, so little do they understand the principles of design, as applicable to their art. I saw in London a copy from Rubens's 'Descent from the Cross,' being executed for a church, and I might cite many other examples of this perversion of taste.

Now, the glass should be painted with architectural ornaments in character with the architecture of the church, and these should be correctly coloured, in imitation of ancient painted

examples of church architecture. Some of you are aware that both the exteriors and interiors of ancient buildings were richly painted. It was thus in Egypt, thus in Greece, and such was the practice in ancient and Gothic times. It was a practice which, I believe, was abandoned when the principles of taste were better understood, although I say this with caution, and it would be foreign to my subject to enter upon this interesting question. The architectural and ornamental design, then, in church windows, in the particular examples which I bring before you, seems to be a representation, in brilliant colours, of the painted architecture of the period, and over these are painted the figures, whether of holy personages, saints, or heroes.

The architectural ornaments or designs fill the whole window, and the figures are drawn and painted in a severe manner, without any affectation of pictorial effect as to light and shadow.

To give you a more distinct idea of my meaning, besides these specimens of painted glass, I exhibit a coloured engraving from one of the windows of the Au Kirche at Munich; in this specimen the true principles of design, as I view them, have been adhered to with considerable fidelity, although such is not exactly the case with all the windows in that church.

I have made these brief observations upon this important subject, because, as far as I can judge from the examples which I have seen, neither in London nor anywhere in this country, is the art of designing for glass-painting yet understood. The windows which you frequently see executed of pieces of stained glass arranged in patterns, cannot be criticised as specimens of the art at all; those in which ornaments are painted are very far from satisfactory; and as to the copies from ancient masters, from Mr. Martin's coloured prints, the portraits of noble lords, &c. &c., the sooner these are sent to the glass-house, to be melted for some useful purpose, the better.

There is a school of glass-painting at Munich, fostered by the King with the utmost care. Professor Hess, one of the most distinguished of the Bavarian artists, is inspector, and under him there is another accomplished artist, who makes the principal designs and directs the works.

We have here the secret of the superiority of our neighbours in this and, as I have shown you, in other ornamental arts. What are our glass-painters as compared with those of Munich? Instead of being accomplished artists, they have hardly a claim to the title at all. We complain of the imperfection of many of our decorative arts, but how can it be otherwise? They are chiefly practised by individuals who, however meritorious, have little claim to artistic knowledge. The establishment of a school of design in every town in the kingdom will not mend this; the use of schools of design is to educate persons who may execute the designs of artists. To make designers, as is expected by many, except for inferior purposes, is impossible. A classical education, a perfect knowledge of the history of Art, in fine, an educated mind and a refined taste, are necessary to the designer for important ornamental works; and till it is made worth while for the professors of these to follow the art, and till such persons are employed, we must, of necessity, make what efforts we may, be behind our neighbours in these ornamental arts, since they avail themselves of the services of the finest talent within their reach.

To return to the Munich School of Glass-Painting. The director first prepares full-size cartoons; these he prints in water-colour (and I have nowhere seen more beautiful drawings); other cartoons are then prepared which may be termed maps of the colours; these are coarsely executed, but correctly tinted; the simple colours only are indicated; thus a red robe is painted of a flat red, the shades being left out, and so on with the other colours. This map, so to speak, is put into the hands of the glass-cutter; he matches the tints from his stock of coloured glass, and cuts it to the shapes. This process requires much practice; many of the pieces are very small and of somewhat complicated shapes; he must also allow for the leading, or uniting by means of strips of lead, as you see in this example.

The coloured and white pieces being now united with lead in the usual way, pass into the hands of the artist, and are painted. A mystery

is made of the preparation of the colours, and I was not allowed to make any inquiries; but this mechanical part of the art is, I believe, well understood amongst ourselves. After the painting is completed, the lead is taken out, and the pieces of painted glass are put into the stove. An old man from Nuremberg superintends this department, and is the only person in the establishment who has the requisite experience.

The encouragement given to the art which I have just described, has led to great improvements in the manufacture of glass, and the optical instruments of Munich have now a high reputation.

In France, I was also chiefly occupied inquiring into processes of painting, and I had little time to see to other matters. I cannot venture to offer you more than a few very general observations on the arts of this great and interesting country, but I shall bring under your notice a few facts which bear upon the subject which I have been attempting to illustrate.

Art is extensively patronised in France, and frequently with political views. The patronage, however, is not always judicious, and the very frequent changes of government which have taken place of late years in France have led to this. The patronage of the throne, which is very extensive, has been more steady, and has produced great results, whilst that of the ministry has never been on any well-organized plan, and to this most of the faults that have been committed are to be attributed.

Whatever may be the objections to some details of the system, Art is extensively patronised in France by the throne, the ministry, and the municipalities, and great has been the progress that has been made.

I might give you many examples of the munificent care with which the French Government watches over and promotes the welfare of Art; I might describe to you that magnificent establishment, the *Ecoles des Beaux Arts* at Paris; but I must content myself with a brief notice of that most important of all establishments, the French Academy at Rome.

The French Academy occupies the Villa Medici, with its fine and extensive garden on the Pincian Mount. One of the most distinguished of the French artists is sent to Rome as director, his office enduring for five years; he has fine apartments in one part of the villa, and entertains during winter.

I do not know how many pupils are sent, or how long they remain; I believe five years; but this is of no consequence to the view that I am at present taking. The whole cost of the establishment is 100,000 francs, or £5000 sterling per annum, of which 20,000 francs are expended in travelling expenses during the hot summer months, when the pupils leave Rome (then unhealthy) and visit other parts of Italy.

The students are required to be at home at meals, unless they have the permission of the director to do otherwise. They are also required to keep regular hours, to be studious and diligent, and to secure this, tasks are allotted to them. The young architects, who study monuments of antiquity, are provided with scaffolding, ladders, and every convenience, and the painters and sculptors are equally cared for; and, lastly, the director regularly sees company, generally composed from the best native and foreign society, where the pupils have every opportunity of improving themselves in this agreeable and refined intercourse.

Contrast this with the English system. Every three years a travelling student is sent abroad, and he is thrown into a position, for profiting in which he is often wholly unprepared by previous education; he is generally quite ignorant of the history of Art, or of any art but that which he has worshipped in the Academy, and is probably prejudiced against all other; he is, in fact, sent to Rome, provided with funds, and perfectly free to follow any course he may choose, without any guide at the very time he most needs one. The result may be anticipated; and I believe that very few of the travelling students have attained to any eminence; whilst, on the other side, many of the most distinguished of the French artists were students in this Roman establishment.

I was assured by the directors of the Museums in Paris, by M. Ingres, late director of the French Academy, and by M. Couder, that they considered

the French Academy in Rome as one of the most valuable and useful of their national institutions for the benefit of Art.

I have contrasted the French system with ours, and this is one of those unpleasant contrasts that we are forced to make; but still, be it observed, we have in our plan another instance of artists doing what they can for the benefit of Art, unaided either by the public or the government of the country.

I am unable, as I have said, to give you any detailed account of the arts and manufactures of France: to do so would also be beside my subject. We have, however, much need to be up and doing. We have admitted the superiority, in point of taste, of many of the French manufactures, but we have claimed for ours great superiority of fabric. This, in many respects, is fast becoming a fallacy; and as the French have greatly excelled us in taste, they are now, in many cases, equalling us in fabric.

I found in the Italian ports our fine woollen cloths and printed goods comparatively unsaleable, because the French goods were much superior. I was informed that, in America, their glass manufacture, because of its superior beauty, has the advantage of ours in the market; and I have particularly to mention their astonishing progress in cutlery, in which only a short time ago they were, almost to a proverb, deficient. They now produce various articles which, in appearance, at any rate, are equal to our own. We ought to take these things into our serious consideration.

But, to return to my more immediate subject.

Great additions have lately been made to the Hotel de Ville of Paris; and the public apartments of the Lord Mayor, if I may so call him, have been painted by some of the most distinguished of the French artists, amongst whom I may mention M. Vauchelet, to whom two of the rooms have been intrusted. In one he has painted, on pillars of polished white scagliola, a series of exquisitely designed arabesques; his subject is continued in the frieze and terminated on the ceiling; the other rooms are appropriately and magnificently decorated also. In this building we have an instance of well-directed municipal patronage of Art; and a number of churches exhibit, at the same time, instances of the munificent patronage of the worthy magistracy of Paris.

In the Chambre des Pairs, and in that des Députés, and in a number of churches and public buildings, we see the results of the efforts of the French Government. At Fontainebleau, Versailles, and in the Louvre (and I dare say elsewhere), may be seen a prodigious number of works of Art executed by order of his Majesty the King of the French. To give you some idea of the extent of the works carried on at Versailles, I may mention that I was shown by my friend, Monsieur Neveu, the King's architect, sixty large portfolios of the drawings for the works now in progress.

I have endeavoured to show you, in these brief observations on German and on French Art, what are the true causes of the superiority of these nations in the decorative arts.

It must be perfectly evident to you that palaces painted by accomplished artists, must be in better taste, better done, and far more complete and interesting, than those like ours, in which, after the architect has closed his labours, the house-painter and upholsterer alone are consulted. This is so evident, that I need not detain you further with many arguments on this portion of my subject.

But our neighbours go further in this decorative employment of artists. I saw one of the most able of the Parisian artists designing ornamental tapestries for the palace, to be executed at the Gobelins. You will remember that Raffaele did the same, and our finest possessions are some of the cartoons which he prepared for such a purpose.

The works of artists are, in fine, the very sources from which all our decorative artists draw their examples, and their jumbles are chiefly made up from the arabesques of the Vatican, those of the palace of the T at Mantua, and the well known designs of Watteau. We shall have nothing new, not even an appropriate application of what is old, till, as of old, and as now in Germany and in France, the most able artists we can command are employed in such departments of Art.

The tradesman need not be jealous of this employment of the artist. There can be little doubt that, were artists employed to paint and to direct the painting of our royal and other palaces, the

taste for such decorations would rapidly spread over the land, and the employment of the tradesman would be increased a hundred-fold; whilst, by the diffusion of taste, and the increase of skill on the part of our workmen, that which is now far too expensive for many to adopt would then be brought within the compass of their means.

By the employment of artists, the taste of the nation generally would be greatly improved, and I have no doubt that we should soon be enabled to meet our neighbours in those wide fields where we confess that they have beaten us, and there can also be no doubt that our commercial prosperity would be thereby increased.

Before concluding this paper, I shall briefly bring before you one plan which would, I think, greatly aid in promoting taste in manufactures amongst all classes.

I have endeavoured to show you that, without a more general employment of artists, we cannot hope to rival our neighbours. I have also said that, like them, we must open museums to our people, and increase the numbers of our schools of design.

With regard to museums, our attention has been almost entirely directed to the accumulation in these of precious works of Art and of antiquities, but no one seems to have thought of the accumulation of specimens of ancient industrial Art, and also of foreign manufactures. To make artists, and to cultivate taste in the Fine Arts, we have purchased the Elgin and other marbles, and we are slowly forming a national gallery. We do not think it enough to provide our young artists with casts of portions of statues and with prints for pictures; we procure for them real Greek and Roman statues, and real pictures by the great masters—and we do well. Now, I would propose that we should carry out this principle in our efforts to promote taste in manufactures of every description; let us form museums in which the citizen may see, free of all cost, specimens of ancient iron-work, wood-carving, glass-painting, and of such arts as were successfully practised in ancient times, of which examples still exist; and to this museum let there be yearly added specimens of the novel and tasteful inventions of our clever neighbours and rivals, so that we may have an opportunity of knowing what they are about, and of comparing our efforts with theirs.

I was influenced by such thoughts as these, when I purchased, for the Honourable Board of Trustees for Manufactures, the objects which they have obligingly permitted me to exhibit to you. I have formed the nucleus of such a museum as that which I advocate. You may observe amongst these, specimens of iron-work, centuries old, which (as I have already remarked) excel in taste and workmanship all the productions of our days; also a lock of ancient date, which I am told is a miracle both of workmanship and inventive skill.

There are also a few specimens of carving, of ancient glass-painting, and some of tasteful modern German manufactures; there are not many of these, but they are all pleasing examples of taste and skill, and I shall, by their exhibition in our school of ornamental design, give the pupils a better idea of the various arts exemplified in these specimens, than if I were provided with all the prints that ever were published, and were to lecture from morning till night every day of the year.

I have briefly alluded to a plan, for which I trust to have the support of your opinion, as one which will be greatly conducive to our advancement in the Arts.

[As we shall intimate elsewhere, it is our intention to devote much time and space to a proper consideration of

THE ARTS, DECORATIVE AND ORNAMENTAL, upon which circumstances now seem to justify the hope that THE FINE ARTS will bestow timely and valuable aid.

We shall thus give a novel feature to our journal, render it more extensively useful, and enlist in its favour a new and very extensive class.]

## ART IN CONTINENTAL STATES.

FRANCE.—PARIS.—The painted windows of the Chapel of St. Ferdinand are ten in number, whereon are fourteen figures representing saints; upon the three round windows are the cardinal virtues. The compositions are by Ingres.

*The late M. Cortot.*—In 1806 M. Cortot obtained the second prize for an alto-relievo, and the first grand prize in 1809 for his 'Marius meditating among the Ruins of Carthage.' Being sent to Rome, he devoted himself exclusively, according to the prevailing taste, to the study of Hellenic art. His works are numerous, and are distinguished by their simple grandeur; his method being to sacrifice the detail to the main effect—considering less the special character of each part than the coincidence of the whole.

*Public Statues.*—Three public statues are finished: that of Guillaume Budé, by Brian; of Michel Allier, by Moine; and of the Abbé de l'Épée, by Préault. And for the Garden of the Luxembourg the statue of Jeanne d'Albret is in progress by Brian; and a statue of the Virgin, by Oudiné, for the Chapel of St. Gervais.

A statue of Duquesne will shortly be placed beside that of La Perouse, in the Court of the Louvre. It is by the elder Dantan, and intended to ornament the town of Dieppe, of which Duquesne was a native.

*The Conservatoire.*—The scaffolding being removed, the façade is now visible. The allegorical figures represent Opera, Comic Opera, Tragedy and Comedy, and are the work of M. Lebrun.

*The Abbé de l'Épée.*—The inauguration of the statue of the Abbé de l'Épée, the founder of the Institution for the Deaf and Dumb, took place at Versailles, at which the prefect and all the municipal authorities assisted. The Abbé is represented in the full costume of an ecclesiastic, holding in the left hand a tablet, on which he is writing. The pedestal is decorated with three bas-reliefs; those on the sides are female figures, the other a representation of the tomb of the Abbé as it is at St. Roch. He died at the age of seventy-eight in 1789, but it was not until some years afterwards that the institution was opened.

*La Perouse.*—The statue of La Perouse, which has been in the Court of the Louvre during a month, is now exposed to view by the removal of the covering. La Perouse is represented in the uniform of an admiral of the eighteenth century. His cloak, in confused folds seems to be agitated by the wind. In the right hand he holds a spy-glass, and the left, which grasps a chart partially unrolled, is supported on the fragment of a mast, broken by the tempest, as if at the moment of shipwreck. At the bottom of the statue the name is written La Peyrouse, an error which ought to be corrected, since the orthography is as above.

*Architectural Competition.*—The result of the competition on the subject of 'A Palace for the Institute calculated to receive the five great Academies' has been declared, and the drawings were exhibited on the 20th, 21st, and 22nd days of September. The first prize was awarded to M. Tatz, the second to Dupont, and to André the third. The plans of Delaage, Desbuissons, Lecœurve, Dubois, and Louvet were uniform in style. In all were seen the same compact parallelogram—a heavy central dome, Corinthian or Doric columns at equal distance—all were uniformly devoid of style, character, and originality: their chief merits lay in their execution as water-colour drawings—as they were skilfully washed in, and exhibited skill in the use of the rule and compass.

The plan of M. Tatz, the first prizewinner, was simple and well conceived. His Corinthian portico, his large circular hall and dome, compose with much grandeur of effect. That of M. Dupont was rich but confused,—the façade was masked, and the angle of the pediment was unfortunately repeated by an angular roof. The interior was better ordered, and of the whole of the public halls exhibited, that of M. Dupont was best calculated for sittings. The dome and Doric colonnade of M. André's design was very beautiful.

*Gem Engraving.*—Prizes have been offered to institute a competition in gem engraving, but one artist only has presented himself: M. Merley, who has gained the prize without a competitor. The task proposed, was to form a bas-relief in clay—to repeat it in intaglio upon steel, and copy it thence on to the stone; the subject being, 'Arión

precipitated into the Sea, is received by a Dolphin, and borne to Cape Tenarus.' M. Merley has not chosen the moment at which the Lesbian singer is received by the dolphin; his Arion has just escaped from the waves, and is in the act of stepping from the fish on to the rocks.

The result of this experiment was not necessary to convince us that the glyptic art was almost forgotten. A taste more than usually refined is necessary fully to appreciate the beautiful lines and the correct design of the Greek and Italian gems; efforts, therefore, in this department of Art are not appreciated by the public. The engraving of precious stones seems to have been invented by the Egyptians, and there remain many stones bearing representations of Anubis, Serapis, and the sacred scarabæus. The Ethiopians had seals engraved in intaglio: the Etruscans, and the Tuscans also, have left engraved stones, but the Greeks especially excelled in this art, which they transmitted to the Romans.

**The Louvre.**—Two magnificent vases have been added to the collection, the one Greek and the other Roman. They are placed in the Museum of Charles X., together with three statues recently brought from China.

**VERSAILLES.**—The Baron Bosio is now finishing the group which the King has commissioned him to sculpture for the foot of the staircase of the Historical Museum of Versailles.

**The Victoria Gallery.**—It is said that the King intends establishing a gallery, to bear the name of Queen Victoria, and to contain thirty pictures, representing the principal scenes visited by her Majesty last summer.

**Ingres.**—A scaffold has been raised in the Museum of Charles X. in the Louvre, for the convenience of making a drawing of the 'Apotheosis of Homer,' by Ingres, which it is intended to engrave.

**The Hotel de Ville.**—There will shortly be little left of the ancient Hotel de Ville; the history of which during the three centuries of its existence, would be a synopsis of the history of Paris during that period. It is about to be rebuilt in a manner more befitting the seat of the municipal authority of Paris and of the prefecture of the Seine. In removing some of the old walls and partitions, two inscriptions of the time of Louis XIV. have been discovered.

**Collections of Mementoes made by Travellers.**—A correspondent of a French journal asks the editor in a note, if he has ever seen the collection of some Englishman whom he calls Sir B.; and proceeds to describe a highly-ornamented gallery containing ebony cabinets, in which are ranged "battalions of little stones." We are sufficiently tender on the weaknesses of our countrymen, who would divide among them in little bits the tomb of Virgil or the house of Shakspeare. Our travelling idlers think it necessary to impose upon themselves a taste for something, and accordingly commence collections of *morceaux* to which nobody can attach the slightest value but themselves. We cannot gather exactly from the note of the sapient correspondent, whether he alludes to a cabinet of useless chips of stone or a collection of geological specimens.

**Ancient Art.**—In an article on antique painting in "Les Beaux Arts," the writer, speculating on the manner in which the Romans became possessed of Greek works of Art, says that the Greek painters worked upon wood, and their productions fell into the hands of the Romans in the course of their wars and invasions: they were placed in the possession of the proconsuls as security for the payment of their contributions, and the pledges became forfeited because they could not be redeemed. Some of these works were placed in the temples, others became the property of private persons. We know that Cæsar, Verres, and Tiberius purchased, sold, and bequeathed some of these paintings; and although they were public, and generally admired in Rome, and imitation was admitted and so commonly practised that we find statues astonishingly multiplied by copies—although even the literature, poetry, and philosophy of the Romans were only borrowed from the Greeks, yet withal, it seems by general consent that these works alone have escaped imitation.

**ROURN.**—To the museum of this city are to be added M. Pradier's statue of 'Cassandra' exhibited this year at the Louvre, and also 'The

Triumph of Trajan,' which have been purchased by the Minister of the Interior for this purpose.

**BOURG.**—The inauguration of the statue of Bichat, the author of "Recherches sur la Vie et la Mort," took place in the presence of an assemblage of persons deputed from the most distinguished medical corporations in France. The statue is by David (of Angers), and represents Bichat in the act of writing his great work. The accessories are simple and in good taste. Upon this occasion not less than eleven discourses were delivered by distinguished individuals.

**LYONS.**—A journal of this place, the *Moniteur Judiciaire*, speaks of the discovery of the text of the sentence pronounced by Pilate against our Saviour; but its authenticity we may reasonably doubt, since there is nothing to confirm it. The sentence is engraved on a plate of brass, round which is inscribed—"A like tablet is sent to each tribe." One of these, it is presumed, was discovered in an antique vase of white marble in the course of antiquarian investigations instituted at Aquila, in the kingdom of Naples, in 1808, by the Commission of Antiquities attached to the French army. It was kept in the sacristy of the Chartroux in a box of cedar-wood. The inscription was in Hebrew, and M. Denon caused immediately a copy of it to be made, which at the sale of his effects was purchased by Lord Howard for 3890 francs. After a record of the date, and a recital of the state of Pontius Pilate, the sentence is, that Jesus of Nazareth be condemned "to die upon a cross between two thieves, the chiefs and scribes witnessing for the people, and declaring: 1. That Jesus is a seducer," &c. &c.

**ST. MALO.**—*The Tomb of Chateaubriant.*—In the year 1828 M. de Chateaubriant wrote to the Maire of St. Malo, expressing a wish that his remains should be interred at his birthplace, and soliciting as a last resting-place a spot which he described. In this letter he says that he has long intended to prefer this request to the municipality of his native town, and proceeds to point out the place as "at the eastern point of the Grand Bey, as far to seaward as possible, a little nook of earth just sufficient to afford room for my coffin." To this the mayor replied that the spot designated was no longer in possession of the town; and circumstances for a time prevented the accomplishment of the wish of M. de Chateaubriant. The ground was, however, ultimately obtained, and in a few days 4000 francs were subscribed in St. Malo for the construction of the tomb, which is cut in an immense rock at the extremity of the islet called Grand Bey, which can only be approached at low water. The tomb will be raised in after closing upon the mortal remains it is destined to receive.

**PAU.**—*Henri IV.*—During two centuries the people of Pau have been desirous of possessing a statue of their "Great Henry." Their wish is at length gratified in seeing his statue in the Place Royale. It is by Raggi, and bears a striking resemblance to the portraits of the monarch. All the details of the dress and armour are executed with much care. The bas-reliefs on the pedestal are in another style, by M. Etex, and represent Henry at Coarraze, at Ivry, and under the walls of Paris.

**FINISTÈRE.**—*Antiquities.*—In the forest of Cornouel, near the ruins of the château of this name, an ancient tomb has been discovered, which, on being opened, was found to contain a massive gold chain, consisting of six links, each being sufficiently large to pass a napkin through; also six arrow-heads of sharp and transparent silex, a sword, three lance-heads (one of which is of silver), ashes, and pieces of baked clay. The tomb is supposed to have been that of a Gaulish chief.

**VERVINS.**—The Count de Merode has commissioned M. Petit, a sculptor of Glageon, to copy the tomb of Barthélemy de Vice, who was Bishop of Laon during the first half of the twelfth century. The tomb was discovered at Foigny, the property of the Count de Merode, and the facsimile is intended for the ancient Cathedral of Laon.

**GERMANY.**—**BERLIN.**—On the recent anniversary of the birthday of the King of Prussia, the inauguration of the monument to 'Peace' was celebrated; it is situated in the Place Belle-Alliance, and was commenced three years ago. The lower part of the composition consists of a fountain, and

five steps leading to the pedestal of the column, the shaft of which is a granite monolith, 22 feet high. The capital is Corinthian, and of marble, bearing eagles on the sides, as symbolical of Prussia. The pillar is surmounted by 'Victory,' bearing in one hand the palm, and in the other the fillet of laurel. The statue is by Rauch.

**The Museum.**—The buildings and decorations are proceeding with surprising rapidity; the frescoes in the hall of the old museum, after Schinkel's admired compositions, are already advanced; and the colossal 'Amazon' group, in bronze, by Kiss, is placed as an ornament to the exterior, to which it is intended to add another group, by Rauch, and also paintings in fresco. The last portions of Waagen's collections in Italy have been received, among which are some sculptures of interesting character: these will be suitably arranged, and to the Etruscan remains, which have hitherto been distributed without order, will be appointed a distinct apartment.

**Art-Novel.**—An Art-nouvellette has just appeared, under the title, 'Semida der Sebatenker.' The narrative is a simple texture, intended only for the introduction of a discussion upon Art and its relations. The argument turns upon the late Berlin exhibition, whence are taken its texts and subject matter, and dwells especially upon Leasing's 'Huss,' and the works of Gallait and de Biefve, discussing the matter with an energy of thought that has not before been brought to bear upon it. The question is of the merits, respectively, of the Netherland and the German painters: the author, who is unknown, inclines to the former.

**Cornelius.**—In the possession of the Academy of Berlin is a cartoon, by Cornelius, the subject of which is 'The Recognition of Joseph'—a composition esteemed amongst the most valuable they possess. It was drawn for a fresco in the villa of Bartholdy, the late Prussian Consul at Rome, being one of the subjects from the history of Joseph, and is now published as an engraving by Hoffman.

**BADEN-BADEN.**—The frescoes of the new Pump-room, built by Hübsch, will be executed by Götzberger.

**The Nibelungenlied.**—This poem has been illustrated with wood engravings, after drawings by Julius Schnorr and Eugene Neureuther; they are fifty-two in number, varying in size. One of these cuts, presented with a number of the "Kunstblatt," derives its subject from the 33rd Adventure, and represents the commencement of the general battle after the death of Kriemhild's child. The composition is managed with the best effect, but the engraving is coarse, with an affectation of antiquity.

**MUNICH.**—An article in the "Foreign Quarterly Review," on the subject of German architecture, has been answered by Herr Gevilt. The English writer refuses merit of any kind to the German architects, and especially to Schinkel, whom he particularly reproaches with a want of originality.

**Schwanthaler.**—In the studio of this artist are two life-sized statues of Huss and Ziska, intended to be cast in bronze for a Bohemian Wall-halla, an edifice in the Oriental taste, which it is proposed to ornament with bronze statues of national celebrities, and with works in mosaic from Bohemian history.

**DRESDEN.**—*Sale of Engravings.*—The fine collection of engravings formed by Herr Wurtemberg, deceased, at Dantzick, have been sold. It consisted of 3300 plates, classed chronologically, and contained engravings by and after Mantegna, Raffaele, Leonardo, Michael Angelo, Albert Durer, Lucas Cranach, Audran, Wille, Edelink, &c. &c.

**Ancient History.**—The archaeologist Panofka is engaged on a work of interest and magnitude, being a detailed history of the social condition of the Greeks. He has already treated of their education—gymnastic games—music—hunting—war—medicine—fine arts—dances and sports—nuptials—festivals—sacrifices—rural life—marine—commerce—handicraft—domestic life—death and obsequies.

**Pompeian Remains.**—Professor Zalin is publishing the collection of antiquities of Pompeii and Herculaneum. The seventh number is illustrated with drawings after remarkable houses, and from

pictures, the subjects of which are 'Iphigenia,' and the 'Adventures of Psyche.'

The inauguration of the statue of the late King Frederick Augustus took place in presence of the royal family and an immense assemblage of spectators. After a discourse pronounced by Herr Von Noslitz, Minister of the Interior, a company of 58 young people, a number corresponding to that of the years during which the late King reigned, placed crowns upon the head of the statue, and a salute of 58 guns announced the fall of the veil by which the work had been covered. There is not among ourselves sentiment enough to set gravely about such ceremonies, otherwise there is much that we might borrow from our neighbours in this way that would incline us to think better of ourselves, and justly estimate the persons we thus commemorate.

**FREIBURG.**—A monument to Rotteck, the historian, is to be erected in an open square in this city. It is a statue nine feet in height.

**KÜSSNACHT.**—*Tell.*—A new bath establishment recently opened here is ornamented with a bronze group of William Tell and his son with the apple.

**MAESTRICHT.**—A statue of Charlemagne has been erected in one of the chapels of the Church of St. Serpaas, dedicated to him. The figure leans upon a sword, and is enveloped in a cloak; on the head is a crown with the cross, and in the hand a ball, as an emblem of his power. This church was built in his reign: the statue, which is visible from every part of it, is by the Belgian sculptor Geefs.

**REMAGEN.**—The new Gothic church which was founded by the Count Von Fürstenburg has been finished by Zwirnen, the architect of the Cathedral of Cologne, and will now be decorated in fresco by Deger.

**BRESLAU.**—Since the visit of the Swedes to this place during the thirty years' war, the crypt of the Church of St. Bartholomew, which was occupied as a stable, has not been used. The frescoes and other ornaments have been entirely destroyed, but it is now the intention of the chapter to restore and open it for divine service.

**KONIGSBERG.**—Since Count Luckner has become the possessor of Neuhafen, the ancient castle seems to rise like a phoenix from its ashes. Artists of all kinds are busied in embellishing this remnant of the olden time.

**COLOGNE.**—The Society for the Erection of Cathedrals have presented 40,000 dollars for the continuation of the northern nave and tower of the cathedral. The works are to be continued strictly according to the instructions of the authorities and the plans of Zwirner.

**SWINEMÜNDE.**—Two colossal bronze groups have lately been landed here, sent from St. Petersburg as a present to the King of Prussia. Each consists of a horsebreaker holding by the bridle an untamed horse. They are by the sculptor Clott, of Jürgensberg, and will be placed in front of the Museum at Berlin.

**STUTTGART.**—By means of the liberality of the King, the three great windows of the choir of the cathedral are now finished with the intended designs in painted glass.

**WÜRZBURG.**—The historical society of this place has commissioned the sculptor Halbig to execute a stone monument, eleven feet high, in memory of the lyric poet, Walter van der Vogelweide. It is a mausoleum, the quadrangular base of which will have a cup, to be provided with food and water for the birds; for Walter, by a singular testamentary passage, wills that the birds should be fed upon his tomb, which is constructed conveniently for the purpose. The name Vogelweide means literally *food for birds*.

**SPIRES.**—Preparations are in progress in the cathedral for the reception of the statue of the Emperor Rodolph of Habsbourg, to be executed by Schwanthaler, by command of the King of Bavaria. It will be placed opposite the monument of Adolphus of Nassau, in the choir of the Kings, where are laid the remains of eight Emperors of Germany. Activity in the cause of Art is not confined to the capitals: it is also shown in places which are deemed unworthy of the consideration of the tourist. The Prince of Lippe-Delmeold has just purchased a statue of Thusnelda, who, accord-

ing to Tacitus, was delivered by her father to Germanicus, and condemned to slavery. The sculptor is Ernest von Bandel, who departs for Carrara, where he proposes to execute busts of the reigning Prince and Princess. By the same artist a monument is in progress to Arminius, near Delmeold, in the Thuringian forest, the scene of the glorious resistance to the invasion of the Romans.

**ITALY.—ROME.**—The second statue by our countryman Gibson, of the late Mr. Huskisson, has been finished in the marble; and, notwithstanding the high merit of the former, which is at Liverpool, it cannot be denied that this work exhibits, in power and feeling, a marked superiority over the preceding one. This excellence announces itself not only in the form, but also in its more earnest conception and graver dignity. Among the portrait statues of our school of sculpture it will be allotted a distinguished place. We have often taken occasion to lament the extreme poverty of the bulk of the collection of monuments in Westminster Abbey and in St. Paul's. They were executed during the dark time of our sculpture—an obscurity yet undispelled, since so few stars have arisen; for, with the exception of those of Flaxman, some by Chantrey, and one or two others, we could by no means treat favourably of the rest. Chantrey's monument to Sir Stamford Raffles, and that of Joseph to the memory of Wilberforce, in Westminster Abbey, are in many respects good, but devoid of dignity: incomparably better are the statues of Pitt, Canning, and Watt, by Chantrey, and those of Sir John Moore in Glasgow, and of Burns at Edinburgh, by Flaxman. Another beautiful work, by Gibson, is a group of 'Hunter and his Dog.' Wyatt has finished for Prince Albert a 'Penelope,' as graceful as his productions always are, but wanting in living individuality; and the American sculptor, Crawford, has finished an 'Orpheus,' a work of high excellence.

**Egyptian Sculpture.**—At an assemblage of the Antiquarian Academy, the Father Ungarelli delivered an explanatory lecture upon a small Egyptian statue, which was added by Gregory XVI. to the Museum of the Vatican. It bore a hieroglyphic inscription, signifying that the person represented belonged at once to a military and religious order. He resided at Saïs, then the capital of Lower Egypt. He served four Kings in honourable offices—the two first of whom were Egyptian, the others Persian; for he lived at the time of the invasion of Cambyses.

The building of the Church of St. Paul proceeds slowly, inasmuch as to destroy all hope of its completion for the year 1850. The pillars of this church, which are of Egyptian alabaster, and presented by Mehemet Ali, are of surpassing beauty.

Count Kolowrat has commissioned the sculptor Max to execute a marble monument for a church in Bohemia, the subject to comprehend the national apostles, Saints Cyrilus and Methodius.

**MILAN.**—The friends of the late Count Verri have come to a resolution of erecting to his memory a statue in the Brera Palace. Its execution is intrusted to the sculptor Fraccaroli.

The Imperial and Royal Institute of Arts and Sciences have voted a statue to the celebrated mathematician Bonaventura Cavalieri.

**TURIN.**—Under the directorship of the Marquis d'Azeglio, the Gallery of Turin will shortly become one of the richest in Europe. The works by which it is enriched are those of masters of the highest class, to whom alone belongs the inappreciable faculty and the immortal privilege of producing inspiration while they instruct. One of the most brilliant acquisitions is the celebrated Daniel da Volterra, from the Palazzo Niccolini, in Florence, the subject of which is the 'Decapitation of St. John the Baptist.'

**SWITZERLAND.—GENEVA.**—*The Exhibition.*—The most remarkable work of this year is the 'Crucifixion' of M. Lugardon, an artist of the school of Ingres, whose purity of design and cold colouring is here closely imitated. The composition is simple, merely showing the Saviour after the agony, and Mary at the foot of the cross (which she embraces), a warm and dark sky, and in the background the Jews in their return to Jerusalem. This is the only religious picture in the exhibition. Among the historical pictures may be mentioned 'Catherine de Medicis receiving the Head of Coligny;' a reception which, by the way, is not

fully authenticated, as, according to De Thou and D'Aubigne, the head was sent to the Pope. The artist's authority is a note in the 'Henriade.' By the same painter, M. Hornung, is exhibited the 'Death of Louis XIV.' He enjoys a high reputation in his native country, but is little esteemed in Paris; nor can we be surprised at this, since in the latter picture he has copied from Versailles, the chamber in which Louis XIV. died; nay, the utmost labour has been bestowed in rendering every object it contains—the draperies, carpets, fringes, embroidery, &c. &c.—inasmuch, that the attention of the spectator is fixed rather upon the upholstery of the picture than anything else. There are many landscapes and other works by Swiss and French artists.

The exclusive admiration for their native country, in which the Swiss indulge, gives a character of extreme monotony to their landscapes. Their only end seems to be the exact reproduction of a locality—trees, plants, granites, rocks, and other natural objects, are so scrupulously rendered, that the naturalist has no difficulty in determining to what category each belongs. The exhibition is poor in sculpture: we must, however, name the 'Venus and Cupid' of Pradier.

**SWEDEN.—STOCKHOLM.**—The Royal Academy of History and Archaeology has just received copies of many important manuscripts, relative to the history of Sweden and Norway, which are in the Royal Library of Paris, and which the Swedish minister at Paris, the Count de Lowenhjelm, has caused to be transcribed and sent to the Academy. The copying of these documents has cost more than 3000 francs (£120 sterling).

**DENMARK.—COPENHAGEN.**—Thorwaldsen has modelled two of the four statues for the Castle of Christiansberg, Hercules and Æsculapius. The one is represented grasping in the right hand a club, and having the lion's skin cast as a shield over the left. Æsculapius stands attentively considering some herbs which he holds in his hand.

**EGYPT.**—In the interesting report made by Professor Lepsius of the result of his researches in Egypt near the pyramid of Moeris—the last built by the Pharaohs—it is said that there were discovered several hundreds of chambers, partly with their thresholds, roofs, and side walls. The number of these chambers is stated by Herodotus to be three thousand, subterranean and otherwise, and from the account given by Lepsius it would seem that this is in no wise exaggerated. It appears that at Gizeh the expedition have explored 106 tombs, but a very few of which have been mentioned by antecedent travellers.

**TUNIS.**—In this regency, and about two and a half days' journey from Tunis, two Germans named Honegger and Mottler, the one an architect the other a merchant, have discovered a Punic inscription in good preservation; and, continuing their search in the same place, they succeeded in removing the earth from a row of tombs eighty in number—the two last of which bore inscriptions, half in the Punic and half in the Latin character. They have also met with forty remarkable bas-reliefs, some of which bear Punic inscriptions.

**MOSUL.**—M. Botta has made a recent communication on the subject of the disinterments he is effecting at this place on the site of the ancient Nineveh. He has sent to Paris a drawing of a very remarkable bas-relief, representing a two-wheeled car drawn by two horses, and containing three persons, the chief of whom, a bearded figure, raises his right arm, and carries in his left hand a bow, and wears a red-coloured tiara. This bas-relief is three feet high, with the inscription above it, over which again has existed another similar work, now entirely effaced. They have sustained injury in two ways, showing, however, that the buildings have been covered not suddenly, but by slow degrees.

*The late Duke of Orleans.*—It was proposed by this Prince to remove from Africa the triumphal arch of Djimilah; and some journals revert to the subject, stating that the project is to be carried into effect, the site chosen for the arch being near the Bridge of Jena.

## FRESCO PAINTING.\*

THE very general distribution of wealth and extension of education, whilst it has tended to promote in England an apparent amelioration of manners, has, nevertheless, become the fruitful cause of much of the mediocrity which now almost stifles the press and weighs down the walls of our public exhibitions. For the mental vacancy, the industrious idleness of the many must be employed or relieved;—by books which excite and ask but a listless exertion of the faculties for their perusal, and by pictures suggestive of scenes of every-day occurrence, which please the fancy without requiring for their appreciation the exercise of higher powers. This result, indeed, has been long foreseen; the incessant demand for novelty has led to its supply, and literature and the Fine Arts have become as integral a portion of commercial speculation as any other of the innumerable articles of the tariff. Nor is this all. The perpetual stimulant of opinion has encouraged that constant fever of rapid production which every year betrays; youths are now desirous to rival M. Angelo, and compete with Raffaele, to excel in every branch of literature, and succeed in every branch of science, in the space of as many months as the great masters of antiquity were content to employ in years of thought and of unremitting experienced execution. Thus they commence and continue their studies in an inverted progress; they value no work that is not instantly convertible into gold; they do not observe upon what basis opinion rests, but proceed to its immediate gratification; and by these means satiating without nourishing public taste, they give strength to the bad judgment, which criticises their productions; and beginning their career by endeavours to produce effect without labour, they close it by incessant labour without effect. That this vaulting ambition which o'erleaps itself has been greatly caused, not so much by the misdirection of a few minds as by the total absence of a sound public taste, and by the other subsidiary causes we have named, will not, we think, be denied. Excellence is of slow growth, and never so slowly developed as in the progress of public opinion. The dissimilarity in this respect with regard to the Fine Arts among European nations is remarkable. Montesquieu solves the oft-debated question by affirming the influence of climate; but, without entirely agreeing with the advocates of a geographical distribution of ability, we are far from admitting climate has no influence whatever. It is not, indeed, the difference of temperature, but a combination of favourable and natural causes which tend to a quicker perception of the beautiful, and a more delicate sensibility of its existence in various climes. For a man to assert that no English artist could produce a work men would not willingly let die, because of the atmosphere beneath which he lives, would lead to the inevitable suspicion of the sanity of the person so asserting; but to say that the mass of the people in London are as readily affected by the sight of a work of Art as the Lazzaroni of Italy, would, we fear, be very frequently refuted by the most casual incident. "It is not education, Sir, we want," replied a respectable mechanic to our inquiries upon this point, "but our minds have not been turned this way." Exactly so: with public exhibitions at a shilling, public edifices only decorated by the house-painter, and with churches not decorated at all, in what manner can public opinion be educated—how nourished; by what example guided, by what experience refined? Fortunately we live in days when moral influence is directly acknowledged to be the best principle of government, and when to provide intellectual resources of amusement for the people is recognised also as a power not only favourable to the advancement of private interests, but to the furtherance of public good.

That the national decoration of the new Houses of Parliament will aid, and most effectually, the general feeling for the Imitative Arts, and greatly encourage their highest branches—that even it has already done so, the Cartoon Exhibition, and the numerous works devoted to the subject of mural

decoration, together with the interest they have alike excited, sufficiently attest. But a few months since, and no work similar to Mr. Sarsfield Taylor's was to be obtained. The information upon fresco-painting was as various and vague as the opinions of its merits. Some believed it was an Art known to the ancients; that it was practised in the middle ages; lost at a subsequent period, and revived by Cornelius. Every one was sure it was unsuited for an English climate, or could be only safely intrusted to the hands of a foreign artist. By slow degrees the public mind was disabused, and the present work leaves no excuse for ignorance on any point. Commencing with the origin and progress of fresco-painting, and of its general employment (chiefly historically) among the Oriental nations, the Greeks, and Romans, Mr. Taylor next narrates the introduction of the Arabesque and Byzantine styles, and of the long disuse of fresco as a branch of Art, until its revival during the middle ages. A period when Christian feeling, and the hitherto repressed opinions of nations settling beneath new and free institutions, sought for an adequate and appropriate form of expression. An age over which the terrible spirit of Dante breathed, which M. Angelo nerved into strength of thought, and upon which, like a concord of sweet sounds mingling into harmony and beauty, the conceptions of Raffaele descended. To this restoration of a noble Art many other causes contributed. The revival of learning, the fearless energy of religious impulse, the passion for cathedral and abbatial decoration, and the general progress of intellectual culture, combined with those passions and interests which ever give increased rapidity to the fierce current of the human will, were all variously but determinately the motive power.

But we must leave this interesting period of the history of Art, to follow Mr. Taylor through his technical details. These form no inconsiderable portion of the work, and have been carefully collected and digested. To the recent information obtained by the Government through the medium of Mr. C. H. Wilson, and to the most valuable contributions of Mr. Eastlake, who has done so much, by the generous devotion of his time to the public service, to promote what as an artist he is so able to enhance—the Fine Arts and their intellectual patronage—the author of this manual has added some valuable matter from sources which, however known, required both condensation and arrangement. These consist chiefly of instructions "for the preparation of the walls," of the colours suitable for fresco-painting, "analyses of the limes," "on the cartoon," and on the "various modes of outlining the painting." Many of the assertions as to the non-durability of fresco are here incidentally refuted; for, apart from haste, ignorance of chemical influence, the careless, slovenly mode of constructing the walls in Italy, would sufficiently account for the destruction we deplore. The wonder is not that so much has been destroyed, but that so much has been preserved. Of the various executive methods of the eminent painters we regret we cannot give extracts; but of the mode adopted by Signor Pasciano of Venice we are induced, for the sake of our unprofessional readers, to abridge the description. It is one of the interesting communications of Mr. Wilson to the Royal Commission. After describing the colours, he adds—"The intonaco being prepared in the manner which I have described, the moment it could bear touching he went to work. The head was that of the Virgin. He began with the pale tint of yellow round the head for the glory. He then laid on the head and neck with a pale flesh colour, and the masses of drapery round the head and shoulders with a middle tint, and with brown and black in the shadows. He next with terra verte and white threw in the cool tints of the face; then with a pale tint of umber and white modelled in the features, covered with the same tint where the hair was to be seen, and with it also indicated the folds of the white veil. All this time he used the colours as thin as we do our water-colours; he touched the intonaco with great tenderness, and allowed ten minutes to elapse ere he would touch the same spot a second time. He now brought his coloured study which stood on an easel near him, and began to model the features, and to throw in the shades with greater accuracy. He then put the colour in the cheeks, and put in the

mouth slightly; then shaded the hair and drapery, deepening always with the same colours, which became darker and darker every time they were applied, as would be the case on paper, for instance. Having worked in this way for half an hour, he made a halt for ten minutes, during which time he occupied himself with mixing darker tints, and then began finishing, loading the lights and using the colours much stiffer, and putting down his touches with precision and firmness, he softened with a brush and a little water." Of the custom, the miserable habit, of retouching in distemper, Mr. Taylor cites very melancholy proofs; but for this natural cause, as well as the deceptive system of many of the Italian artists may be assigned. Had the strict morality of pure fresco-painting prevailed, we are afraid we should have wanted many a monumental record of the past; and perhaps Mr. Wilson's suggestion, the custom arose from the practice of painting upon thin intonacos, is the correct solution; and if it contributed to rapidity of execution, the vast works executed by one artist, and the time required for their fulfilment, might lead to its continuance.

We regret that our limits will not permit us to do more than notice the succeeding chapters upon Encaustic, &c. &c., and that to the details he has given Mr. Taylor has not added some further information relative to the processes adopted at Munich, in particular that of Fernbach. It was understood that the King of Bavaria had permitted its publication, and that it was the medium used by Schnorr and Rottmann, and approved of by Dillis, the Director of the Royal Gallery. Still more desirable it would have been to have obtained some positive testimony as to its results. We believe the encaustics of Munich to be failures, and the cause never yet sufficiently explained. We recommend this manual, because it comprises much valuable technical information, gleaned from various authorities, and heretofore not conveniently arranged or readily found.

It is of great importance to the artist to have a ready guide to the different processes of which it treats, and for the general reader or amateur, to possess every necessary detail, clearly and intelligently treated. The "Manual of Fresco Painting" will do this. The narrative and critical portion we cannot equally praise: the style is inverted, prolix, and obscure; and, to follow the author's occasional enthusiasm, we have been obliged to succumb to his advice, "and combine the most patient investigation with the most indomitable energy in the execution of our plan." So long as he trusts to quotation he is safe; but if he attempt, by his own resources, to describe or eulogise "the mild and elegant art of painting" which once arose from a "cinerous condition" like "a phoenix from its ashes," he is instantly lost: sentence perplexes sentence, words roll on words, until his thoughts, like ill-nursed children, are suffocated by the weight of their own clothes. We regret this very much, for he fully understands his subject, and this is really an extremely useful book. A second edition will, we trust, enable the printer also to remove the blemishes of the *errata* we have observed.

We cordially coincide with Mr. Taylor in the praise he has so becomingly bestowed upon the Royal Commission. The Cartoon Exhibition was not alone an epoch of Art, but the evidence of a wide-spread appreciation of its humanizing influence. Even by the humblest it was not gazed on with the stupid wonder of surprise; by the noblest it was not considered as a public lounge. By industry we have become powerful and great; by education let us make our countrymen morally so. By arms and commerce we have colonized the world; by Art, religion, and science, let us soften the asperities of conquest. There is no victory so great as the conquest of the fierce passions of human nature by the beneficent influence of knowledge.

Messrs. Winsor and Newton have published, in a very neat and compact form, "A Practical Arrangement of the Precepts laid down for Fresco-painting in the two Reports of the Commissioners on the Fine Arts." It is a publication that no artist should be without; it will cost him very little (not, we imagine, more than a shilling), and may be of incalculable benefit for reference daily.

\* A Manual of Fresco and Encaustic Painting, containing ample instructions for executing works of these descriptions. By W. B. Sarsfield Taylor, Curator of the Living Model Academy. Chapman and Hall.

## BRITISH MUSEUM.

EVEN those who seemed to be at first rather disposed to be lenient towards this unfortunate building and its architect, have since assumed a very different tone; and no wonder, since, in spite of all precautions to keep the model shut up from public view, the design for the façade has got wind. A plan of that front and its colonnades has appeared in two several publications; and there is also a print which purports to be a perspective view of the elevation: while the former makes evident several gross defects, the other shows the architectural nakedness and poverty of the design, and of everything in it, except merely the columns themselves, for even their entablatures have a most bare and unfinished look. Still, however unfavourable they may be in themselves, neither plan nor view betray what will be very great blemishes in the general composition—perhaps we should say “would be” so, were the front of the Museum itself of such beauty that anything of commonplace character in connexion with it would shock us by its unworthiness in such juxtaposition with *classic* colonnades: we allude to the side or out buildings, intended as residences for the officials of the establishment. In regard to them, evidence more plain than satisfactory may be obtained in Great Russell-street, where one of them—that to the west—is half erected. No doubt those who are to occupy those houses will approve of the architect’s judgment in so placing them as to command a view both of the courtyard and the street; but, as component portions of the general façade, they must be fatal to all dignity and all grandeur of design. The offices within the court of old Montague House were at least in keeping with the front of it; which will hardly prove the case in the new building. In short, the Museum will be such a meagre and mawkish affair, that it will seem to have been a mere parish job.

What are the patrons and guardians of Art about, that the architect is allowed to proceed, notwithstanding the remonstrances that have been urged against his doings? Or if he has been at all unfairly treated, and his design been misrepresented, why does neither he himself nor any one else attempt to vindicate it, and satisfy us that it will ultimately be acknowledged an honour to the country? Instead of this, not a single voice has been raised in any quarter in defence of, or even in apology for it. If it has any advocates, they are one and all quite mute and tongue tied. Those who are looked up to as taking the lead in matters of Art, seem to have agreed to send the unfortunate British Museum to Coventry; and, could they send it thither in reality as well as metaphorically, they would relieve the metropolis from what will prove an architectural stigma to it. That, with the example of the National Gallery to warn on the one hand, and with that of the Palace of Westminster to incite and encourage on the other, the British Museum should be left to take its chance for better or worse—for being at the very best barely tolerable, and in all probability most intolerable, is to us perfectly incomprehensible. There ought to be no sort of jobbery or favouritism, nor even the slightest suspicion of it, in a work which, if it does not reflect credit, must bring disgrace upon our taste as a nation.

## OBITUARY.

## WILLIAM SEGUIER, ESQ.

WE lament to enter upon our journal a record of the death of this gentleman, who occupied the important posts of Keeper of the National Gallery, and Conservator of the Royal Pictures, &c. &c. For some particulars connected with his life, we are indebted to a correspondent.

“Mr. Seguer was early initiated in the study of Art, his father being an eminent dealer in articles of *vertu*. After his father’s death he continued the business for many years, securing by his excellent taste and unimpeachable integrity, the entire confidence of the principal collectors of the last 50 years. By his advice the beautiful collection of Mr. Watson Taylor was formed, which evinced, by the high prices the pictures produced when dispersed by auction, the accuracy of his judgment. George IV., when forming his splendid gallery of Dutch masters, placed much reliance on the taste of Mr. Seguer, and appointed him con-

servator of all the royal collections, a situation which he ably filled during the reigns of William IV. and her present Majesty; and to him the public are indebted for the admirable arrangement of the pictures at Hampton-court Palace. By his advice the selection of pictures for the various palaces was made. At the foundation of the “National Gallery,” Mr. Seguer was appointed chief director, the trustees in their purchases relying greatly upon his experience and judgment. Mr. Seguer also held the important situation of Keeper to the British Institution, which frequently afforded him the pleasing opportunity of befriending a deserving and gifted artist, and which he was ever anxious to avail himself of. United with these public situations, he was honoured with the confidence of the Duke of Wellington and the Marquis of Westminster, having under his attention and direction the preservation of their valuable works of Art. His sound judgment and high character procured him the intimate friendship of those far above him in rank and fortune, by whom he was ever esteemed a welcome guest. As an amateur of engravings, the etchings of the early Dutch masters were ever delightful to him; he formed a beautiful collection, particularly of the works of Rembrandt, in their finest state; his Ostade and Claude etchings are of the rarest order, as is his general collection of the works of the Dutch painters. It would be impossible to over-estimate his ability as a restorer of pictures; so judicious, so able in his method, no picture was ever lessened in value under his superintendence; where little was required, little was done—but that little judiciously. In this branch of his business he was assisted by his brother, on whom the labour devolved, and to him, we doubt not, the confidence of his late brother’s friends will be continued. Mr. Seguer was, we hear, in his 72nd year, a period of life he appeared not to have attained, and enjoying, till within the last few months, excellent health and spirits. He has left several daughters, but no son. Few persons were more highly esteemed for integrity and urbanity of manners; while his superior and accurate judgment rendered his opinions valuable to every connoisseur in Art, by whom his death will be deplored.”

[We speak from our own knowledge, when we bear testimony to the liberal feeling and ready kindness of Mr. Seguer, manifested upon all occasions, and they were not a few, when circumstances brought us into communication with him. Several times it was our duty to apply to him on behalf of students who desired to copy in the National Gallery, and did not exactly know how his object was to be attained. In every instance our request was instantly complied with. We know also that, although his time and attention were directed chiefly to ancient art, the modern artists of Great Britain have in him lost a generous, considerate, and warm friend, who had their best interests near at heart. We fear he will be sadly missed from the British Institution, where he did much service, while for the errors that occurred he was very rarely in any degree responsible.]

## ART IN THE PROVINCES.

EDINBURGH.—ROYAL SCOTTISH ACADEMY.—At the seventeenth annual general meeting of the Royal Scottish Academy of Painting, Sculpture, and Architecture, held at Edinburgh on Wednesday the 8th of November, 1843, the office-bearers were elected, and the council declared, as follows:—Sir William Allan, R.A., *President*; D. O. Hill, Esq., *Secretary*; J. F. Williams, Esq., *Treasurer*; George Harvey, Esq., and Charles Lees, Esq., *Auditors*. *Council*—John Steell, Esq.; W. H. Playfair, Esq.; William Bonnar, Esq.; Samuel Mackenzie, Esq.; John Watson Gordon, Esq., A.R.A.; Thomas Hamilton, Esq. *Visitors of the Life Academy*—Charles Lees, Esq.; Thomas Duncan, Esq., A.R.A.; David Scott, Esq.; Kenneth Macleay, Esq.

ASSOCIATION FOR THE PROMOTION OF THE FINE ARTS.—The picture selected for distribution among the subscribers this year, is from Mr. Scott Lauder’s Painting of the ‘Italian Goatherds.’ Mr. Scott Lauder’s charming picture of the ‘Glee Maiden,’ which was so much admired in the Exhibition two years ago, is in the hands of Mr. Stocks to be engraved for the Association, and is intended for distribution next year.

MANCHESTER ROYAL INSTITUTION EXHIBITION.—We are glad to find that the result of this year’s Exhibition has been of a satisfactory nature, and that sales to an amount exceeding by more than one half those of 1842 have been effected. It gives us pleasure also in being enabled to state, that looking at the arrangements about to be made for the ensuing year both by the General Committee as also by the “Association for the Promotion of the Fine Arts,” the very best results are likely to follow; and we trust we are not to be disappointed in our anticipations, that the Manchester Exhibition of 1844 (to be opened in June,) is to be one of a higher class than any which has preceded it; and we found this opinion not less from the nature of the new arrangements, than from the increasing support now giving to it by the resident merchants and the inhabitants generally, and the interest which it is also beginning to excite in the populous districts around that great metropolis of commerce.

BIRMINGHAM.—The ballot for prizes in the Art-Union of Birmingham has taken place; but at too late a period in the month to enable us to give a report of it. The Birmingham Society presents each subscriber, on the payment of the subscription, with a copy of an admirable engraving by Bellins, from the picture by Mr. Fisk, ‘Charles V. in the Studio of Titian.’

BURY ST. EDMUND’S.—An appeal has been sent forth, signed by “Samuel Tymms, Hon. Sec.” to induce subscriptions for the restoration of the noble and beautiful Norman tower of this ancient town. Sums to the extent of £1500 have been already collected. We print a portion of the circular which Mr. Tymms has issued:—

“This celebrated tower, erected in the reign of William the Conqueror, as the grand portal or gate-tower of the magnificent church of Abbot Baldwin, and now forming the grand entrance to the churchyard of the beautiful churches of St. Mary and St. James, to the latter of which it serves as the bell tower, has been pronounced by competent authorities—foreign as well as English—to be the finest building of its kind and period extant in Europe. The structure is still entire in its main features, and its minor details are not obliterated, although somewhat impaired by age, and more by neglect and injudicious reparation. Within the present century some extensive fissures and settlements have appeared, and these having been treated only by the useless and mischievous applications of cementing and wedging the cracks, and blocking up the arches, the walls have been thrown so much out of the perpendicular, and various parts of the fabric have been so much disturbed, that, unless effectual measures of repair be promptly adopted, there is great danger that this unique specimen of Norman architecture may fall into ruin.

“The cost of repairing and securing the tower, including the substantial and accurate restoration of the defective mouldings and ornaments, Mr. Cottingham estimates at £2370. Towards this sum the parishioners, as such, have undertaken to provide £320, and the inhabitants of the town in general have shown their anxiety to preserve so fine a relic of the architecture of a distant age, by entering into a subscription in aid of the work. But the whole amount which can be expected to be raised in the town must fall far short of the sum required. Under these circumstances, the committee appointed by a general meeting of the inhabitants find it necessary to solicit the assistance, not only of those who are connected with the town and neighbourhood, but of all who are interested in upholding their country’s monuments of antiquity, and who honour, and who would gladly imitate, the examples of their forefathers’ zeal in the cause of religion.”

CORK.—The subscribers to the Cork Art-Union have met to determine and distribute prizes. Lord Bernard was in the chair. Pictures to the value of £175 10s. were selected and allotted. We print the names of the artists and the subjects:—‘Comus,’ D. M’Donald; ‘The Invasion,’ S. Watson; ‘Dogs,’ J. H. Brocas; ‘A Scene in the Sabine Apennines,’ J. Mahony; ‘Luxor Colonnade,’ ditto; ‘Canale Provan, Venice,’ ditto; ‘Scene at Venice,’ ditto; ‘Rue Malplam,’ ditto; ‘Rue aux Ours, Rouen,’ ditto; ‘View on the Lee,’ G. Atkinson; ‘Capture of the Dart Frigate,’ ditto; ‘View above Blackrock,’ ditto; ‘Toureen, Waterford,’ J. Connell; ‘Mullinshassig,’ ditto; ‘Dargle,’ ditto; ‘Fishmarket, Skibbereen,’ W. Roe; ‘Peasant Girls,’ ditto; ‘Young Nurse,’ ditto; ‘Rockborough,’ J. Brennan; ‘Raising the Widow’s Son,’ J. B. Brennan; ‘Irish Piper,’ G. Hayes; ‘Peter’s Deliverance,’ ditto; ‘View near Vernon Mount,’ W. Morgan; ‘Killaloe Church,’ J. Noble; ‘Gougau Barra,’ ditto; ‘Carrigmahon,’ R. L. Stopford; ‘Cork Barracks,’ ditto; ‘Devotion,’ P. Walton.

## THE "INVENTOR" OF LITHOTINT.

WE published in our last number a lengthened communication from Mr. Hullmandel, showing the circumstances under which he claims the invention of PRINTING drawings made upon stones. We have, in consequence, received a letter from Mr. Charles Hancock, to which we are bound to give equal publicity. The whole of the documents to which he refers he has submitted to us, together with a large collection of prints, taken both from plates and stones, as he states, by his process, and by his patent. He declares this process to be precisely similar to that of Mr. Hullmandel in all respects, and that his patent was obtained nearly two years before Mr. Hullmandel obtained his; and he intimates his resolute determination to abide the issue of a trial at common law, at some future—and not distant—period. Under these circumstances we must avoid, as far as possible, the offering any opinion; merely supplying the reader with such information as may enable him to form his own judgment concerning the matter. Having, however, afforded ample space and opportunity to Mr. Hullmandel, we are called upon to accord an act of mere justice to Mr. Hancock—which we have done, of course, without any restriction whatever. Our readers need not be told that the character of Mr. Hullmandel places him far beyond the suspicion of a wilful act of injustice.

## "Audi alteram partem."

"SIR,—In the November number of the ART-UNION I have read an article headed, 'The Inventor of Lithotint' (an invention, however, which is nothing more than aquatint on the surface of stones and plates in relief, and not indeed, as in ordinary aquatint), and a letter from Mr. Hullmandel, claiming to be the inventor thereof.

"Unwilling to occupy too great a space in your useful paper, and aware of the great dislike entertained by the public to wade through a tedious mass of correspondence, allow me to make merely a brief statement of facts.

"At the outset, I aver distinctly and emphatically, if there be any invention—to the merit of it whatever it may be, I have a prior claim.

"The date of my patent is January, 1838. The date of Mr. Hullmandel's is November, 1840.

"The first question that arises is, Whether the patents embody one and the same thing? In answer, I beg to draw your attention to the subjoined affidavits of John Burnet, Esq., F.R.S., Messrs. Fairland, Landells, Day, and Graf, not to mention those of several other artists, to whom I must content myself with merely referring—they are Messrs. R. B. Davis, A. Priest, M. E. Cotman, R. Farrier, F. Bate, &c. &c.

"With respect to the exalted personages referred to by Mr. Hullmandel, I apprehend they are needlessly introduced into a controversy of this nature, which all practical men must at once perceive.

"It will next be asked, Why did not I, the inventor, introduce to the public the results of my discovery? Solely because my time was fully occupied with my professional engagements. I determined, therefore, so soon as the various branches of the patent were perfected, either to license or sell it altogether.

"On seeing the specification of Mr. Hullmandel's patent I immediately gave him notice of the infringement, and subsequently applied to the Court of Chancery for an injunction to restrain him. In the commencement of this action I was assisted by the kindness of a friend, who withdrew his support because he did not think the ultimate advantages to be derived would be commensurate to the expenditure necessary to maintain and establish my right. On learning this, my first impulse was to sacrifice all I possessed to defend my own property, but in justice to my numerous family I have stayed proceedings; but it is my firm determination to proceed with the action so soon as my pecuniary means enable me to do so, which period I have good reason to hope is not far distant, when I have no doubt a jury of my countrymen will establish my just rights.

"I am, Sir, your obedient servant,

"CHARLES HANCOCK.

"P.S. In reference to that part of Mr. Hullmandel's letter where he says,—'You have received letters from persons either claiming the invention or asserting that several plates have been produced,' &c. &c., I beg to say, that I am not ashamed of my name, and therefore never write anonymous letters."

The following are extracts from the leading affidavits upon which Mr. Hancock mainly rests his case:—

"In Chancery.—Between Charles Hancock, plaintiff, and Charles Joseph Hullmandel, defendant.—John Burnet, of No. 2, Whitehead's-grove, Chelsea, in the county of Middlesex, engraver, &c., F.R.S., maketh oath and saith, that he, this deponent, has been in the constant use of the art and profession of an engraver for the period of thirty-six years; and that he, this deponent, is well acquainted with, and frequently practised during such period as aforesaid,

that style of engraving usually called *aquatint engraving*. And this deponent further saith, that he is well acquainted with Mr. Charles Hancock, of Grosvenor-place, in the county of Middlesex, artist, the above-named plaintiff; and that some time in the year one thousand eight hundred and thirty-nine, he, this deponent, was informed by the said Charles Hancock that he, the said Charles Hancock, had, among other things, invented a method for engraving and printing aquatint engravings in relief, and had obtained, or was then obtaining, a patent for his, the said Charles Hancock's, said invention. That, some time afterwards, but in the same year, he, this deponent, was applied to by the said Charles Hancock to produce an engraving for him, the said Charles Hancock, by the said new method so invented by the said Charles Hancock as aforesaid. That he, this deponent, by and under the directions of the said Charles Hancock, did produce an aquatint engraving in relief, an impression from which is annexed hereto. That he, this deponent, cannot better describe the difference between the new method so invented by the said Charles Hancock as aforesaid, and the old process of aquatint engraving, than by extracting the following description from the latter part of the first section of the said Charles Hancock's specification, viz.—'The effects produced are the reverse of those resulting from the usual modes of aquatint engraving and printing, namely, instead of biting in deeply those parts which are intended to be dark, I stop them out; and instead of stopping out those parts which are intended to be light, I bite them in deeply, or cut them out with a graver.' And this deponent saith that the foregoing description, as applied to the said Charles Hancock's said new method of aquatint engraving, is strictly correct, and in accordance with the effects produced by this deponent in the engraving so executed as aforesaid by this deponent. That he, this deponent, further saith that he has carefully perused those parts of the specification of the said Charles Hancock's said patent which relate to his said new invention as aforesaid, and also the specification of a patent taken out by Mr. Charles Joseph Hullmandel of Great Marlborough-street, lithographic printer, the above-named defendant, and which is as this deponent believes for a new effect of light and shadow, imitating a brush or stump drawing, or both combined, produced on paper, being an impression from a plate or stone prepared in a particular manner for that purpose, as also the mode of preparing the said plate or stone for that object; and that he, this deponent, maketh oath and saith, that to the best of this deponent's judgment and belief, the invention of the said Charles Joseph Hullmandel is also for engraving and printing aquatint in relief, and may be also exactly described by the said extract from the latter part of the first section of the said specification of the said Charles Hancock's said patent. And, further, to the best of this deponent's judgment and belief, the process as described by the said Charles Joseph Hullmandel in the said specification is in effect and in all the new and material parts thereof precisely similar to those described by the said Charles Hancock; and that he, this deponent, in producing the said engraving as aforesaid, used and employed in all the new and material parts thereof exactly the same methods as those described by the said Charles Joseph Hullmandel in his said specification as aforesaid. And he, this deponent, further saith that, until the said invention of the said Charles Hancock, he, this deponent, had never seen or heard of any method or process for producing aquatint engraving and printing in relief; and that he, this deponent, verily believes the same to have been quite new and unknown until the said invention of the said Charles Hancock as aforesaid.

(Signed) "JNO. BURNET.

"Sworn at the Public Office in Southampton-buildings, in the county of Middlesex, this 17th day of March, 1842, before me, "R. RICHARDS.

"Filed 17th March, 1842."

The affidavit of Mr. E. Landells, wood-engraver, dated March, 1842, states:—

"That about three years ago he, this deponent, was informed by the said C. Hancock that he, the said C. Hancock, had taken out a patent for, amongst other things, certain improvements in the art of engraving, which had been invented by the said C. Hancock. That the said C. Hancock therefore explained to him, this deponent, the process adopted by him, the said C. Hancock, in his, the said C. Hancock's, said new inventions and improvements, and also showed to him, this deponent, several plates and impressions therefrom which had been produced under his, the said Charles Hancock's, said patent. That from such explanation as assigned, and from an inspection of the said plates and impressions, he, this deponent, understood and believed that the chief novelty in his, the said C. Hancock's, said invention, as applied to engraving on metallic plates, was the art or means of producing upon such plate an aquatint engraving in relief, and printing therefrom. That he, this deponent, although he had been for many years in the constant exercise of his said profession of an engraver, not having previously seen or heard of any process by which the same effect could be produced, and believing the same, previously to such invention by the said C. Hancock as assigned, to have been quite new and unknown, he, this deponent, was anxious to execute some small plates under his, the said C. Hancock's, new invention. That he, this deponent, did accordingly execute the same, and that for this purpose he, the said C. Hancock, furnished to this

deponent certain plates covered with a ground composed of resin, dissolved in spirits of wine, and which is usually denominated an aquatint ground. That he, this deponent, then proceeded to make a drawing upon the same, and afterwards bit or etched in the same by the application of acid in the manner usually adopted in aquatint engravings, and that impressions were taken from the said plates when completed by him, this deponent aforesaid. And this deponent further saith that the composition of an aquatint ground, together with the effect and mode of applying the same, is perfectly well understood by aquatint and other engravers, but that the application of the same for the purpose of producing an engraving in relief was, previously to such invention by the said Charles Hancock as aforesaid, to the best of this deponent's knowledge and belief, quite new and unknown."

The affidavit of Mr. Thomas Fairland, lithographic draughtsman:—

"Thomas Fairland, of Middle Brunswick-terrace, Islington, in the county of Middlesex, lithographic draughtsman and printer, maketh oath and saith, that he has been engaged in his said profession as lithographic draughtsman upwards of fifteen years, and five years of such period in practical lithographic printing; and this deponent is well acquainted therewith, and in all the branches thereof. That this deponent for the first time saw and perused the specification of the patent of the said plaintiff mentioned in the pleadings in this cause on the thirty-first day of March last, and thereupon this deponent proceeded to make, work, and produce upon a stone the print marked A produced and shown to this deponent at the time of swearing this affidavit, according to the directions contained in the fourth section thereof, and such print is produced and made by and according to the method directed in the said specification of the said plaintiff's patent; and this deponent further saith, that he this deponent for the first time saw and perused the specification of the patent of the said defendant mentioned in the plaintiff's bill in this suit on the second day of April instant; and this deponent thereupon proceeded to work and produce upon a stone the print marked B, produced and shown to this deponent at the time of swearing this affidavit, according to the directions contained in such specification of the said defendant's patent, and such print marked B was produced and made by and according to the method directed in the said specification of the said defendant's patent. That this deponent hath carefully examined and gone through the said specification of the said defendant's patent, bearing date the second day of March, 1841; and this deponent hath, in like manner, gone through and examined the enrolment dated the 25th day of July, 1838, of the said plaintiff's patent, as to the fourth section thereof; and that the methods directed and employed in each of the said specifications are the same and alike in all the essential principles thereof, and the results are precisely the same.

The affidavit of Mr. Jeremiah Graf, lithographic printer:—

"Jeremiah Graf, of Oxford-market, in the county of Middlesex, lithographic printer, maketh oath and saith, that he has been engaged in his said profession of a lithographic printer for twenty-five years, and being at the head of a very large establishment, has had considerable experience in his said profession; that he is well acquainted with Charles Hancock of Grosvenor-place, in the said county of Middlesex, artist, the above-named plaintiff, saith, that the said Charles Hancock has, upon several occasions, brought to the establishment of him, this deponent, certain stones for the purpose of being printed or proved by this deponent. That several of the impressions that were taken from the said stone at this deponent's said establishment, so far from being failures, were, in the opinion of this deponent, most successful and beautiful specimens, and that some such impressions were shown by this deponent to Monsieur Englemann, the most eminent lithographic printer at Paris, and also to R. J. Lane, the celebrated English lithographer, who agreed with this deponent in such his opinion of the impressions. And he, this deponent, further saith that zinc plates are frequently used in lithographic establishments in substitution of lithographic stones for the purpose of producing effect nearly similar to those produced by the ordinary lithographic stones. That acid is invariably used in the preparation of every lithographic stone, and that the object in using such acid is to etch or bite in the design upon the said stone."

The affidavit of Mr. William Day, lithographic printer, of Gate-street, Lincoln's-inn-fields:—

"William Day, of Gate-street, Lincoln's-inn-fields, in the county of Middlesex, lithographic printer, maketh oath and saith that he has carried on an extensive business as a lithographic printer for many years, and is well acquainted with the different branches of lithography; that in this deponent's judgment and belief, it is absolutely necessary for the purpose of obtaining perfect impression from a drawing upon stone, that such drawing should be in relief. That he, this deponent, is well aware such relief is generally very slight, and seldom perceptible to the touch; but that, according to the best of this deponent's judgment and belief, the beauty and perfection of a lithographic print depends on the proper degree of relief being given to the subject by the application of acid in the ordinary mode

of etching or preparing lithographic drawings so that they may be satisfactorily printed.\*

In order to a proper understanding of these affidavits, it may be desirable to print the following extract from the specification of Mr. Hullmandel:—\*

"The object of my invention is to obtain clear and satisfactory impressions from drawings made on plates or stones, with the brush or camel or sable hair pencil, as well as with the stump, such drawings heretofore not having been made to yield good and clear impressions. For this purpose the plate or stone is first grained as for a chalk drawing: a polished stone may be used, but a grained stone is more pleasant to work on. The drawing being completed on the plate or stone, with ordinary lithographic ink, dissolved in water, and with the use of a brush or a hair pencil or with the stump, or with any of these styles mixed, it is prepared with acid, as is usually done with chalk drawings; after the drawing is thus prepared, with acid as aforesaid, and well dried, the plate or stone is placed in an inclined position, and a solution of resin in a volatile solvent such as is generally used in aquatint is poured over the whole drawing; as the solvent evaporates, the resin cracks or extracts in the usual way, just as is the case in laying a ground upon a polished copper or steel plate, previous to engraving a subject in aquatint. The drawing which is underneath is, therefore, protected where the resinous particles adhere to the plate or stone, while the portions of the plate or stone which are in the cracks or between the portions of resin, are exposed and unprotected. When this ground is well dried, I warm the plate or stone gently before a fire, in order to fix the resin well on the drawing; I then throw over the whole surface of the plate or stone, in order to etch it in those parts not protected by the ground, a very strong mixture of nitric or muriatic acid (or of any acid that will act strongly on lithographic plates or stones) and gum-water, and allow it to act for about a minute. The proportion I usually employ is six parts of gum-water to one of nitric acid. The ground and the drawing are then washed off with spirits of turpentine, and the plate or stone is ready for printing. The ground which I have used with most success is composed of common pitch, one-fourth of an ounce; of resin, four ounces and a half, mixed with one quart of strong spirits of wine. The above must be left to dissolve for three days previous to use, and strained."

#### THE ANNUALS.

NEARLY a quarter of a century has passed since this graceful and pleasant class of books was introduced from Germany into England; yet it seems but yesterday since, under the title of "Forget Me Not," the founder of the English family became a denizen among us in his garb of emerald green. What changes have chanced since then! The popularity of the works led for a time to marvellous efforts at rendering one more perfect than another. Sums of nearly two hundred pounds were paid to engravers for producing a print—size four inches by three; it was by no means uncommon to pay 100 guineas for a single literary paper; and some artists obtained from proprietors amounts varying from 30 guineas to 100 guineas for the "loan" of a picture to be copied by the master-hand of Mr. Charles Heath. As compared with these "palmy days" of the race, the annuals have certainly degenerated of late years. Still they retain many of their advantages; they are elegant and agreeable gifts, and make drawing-room tables seem very cheerful in "the gloomiest month of all the twelve." This year they have, undoubtedly, made a move—one and all—in advance. As compared with the three or four years last past, they are excellent both as examples of literature and art. Our notice of them is necessarily brief. The first that comes before us for notice is our ancient friend,

THE FORGET ME NOT—still, as we trust it ever will be, under the judicious management of Mr. Shoberl—keeping the "even tenor of its way," and being very excellent, in all respects, with little assumption and less pretension. Here is a goodly gathering of pleasant and profitable tales, with some pure and genuine poetry; illustrated by eleven prints, none decidedly bad, and two or three possessing very considerable merit. The best is "The Young Bandit," engraved by Ryall, from a picture by Latilla, exhibited in the Gallery of the Society of British Artists, where it was decidedly and deservedly a favourite. A pretty thing is "The Novice," from a painting by Woolmer. A work of much ability, and very admirably engraved by Mr. J. H. Kernot, is the representation of a

shipwreck, absurdly called "The Delicate Point." Mr. Kernot has also another excellent print, from a fine drawing of "Genoa," by Mr. Cowan. Mr. Mossman (a new name) has engraved, in a manner highly creditable to him, a drawing of "Richmond," by W. Kidd, S.A.; an engraving of decided excellence, by C. W. Wass, is from a clever drawing by Cattermole; and Mr. Alfred Heath has engraved, very excellently, Mr. E. Corbould's picture of the "Flight into Egypt." On the whole, perhaps, no volume of the "Forget Me Not" has contained so many really good prints from excellent and interesting pictures; nor do we think the book has ever been superior in its literary contents.

THE FRIENDSHIP'S OFFERING.—This book is edited by Leitch Ritchie, but is understood to owe much to the taste and ability of Miss Camilla Toulmin—one of the most effective of the contributors. It is this year enlarged in size, and prettily bound. Its literature is a pleasant melange, with no article of a very conspicuous character; the whole of its contents, however, being above the average rate of annual excellence. We have been especially pleased with one little poem, by J. E. Duncan, entitled "Mary and the Mossy Stile;" we quote the first and last stanzas as supplying a good subject for an artist:—

"Do ye know where I first saw my Mary,  
The sunny-eyed, rosy-cheeked fair,  
With her long silken hair, and her bosom so fair,  
And a smile—of that smile be ye wary!"

"Dear to me is yon mossy old stile there.  
For O, my young heart she did wile there;  
But I know she'll be true, or else I might rue  
That stile, and that smile, and that Mary!"

The book is embellished with some woodcuts, which do it no service; some of them are exceedingly vulgar, witness that at page 4, and especially that at page 177: the latter indeed is objectionable to a degree, and grievously "blots" the volume. Besides the twenty-five illustrations on wood, it contains ten engravings on steel, the best of which, perhaps, is engraved by E. Finden, from a painting by Chisholm, "The Look-out." "The Well of St. Keyne" makes a pretty picture; and is accompanied by some very elegant and spirited verses by Miss Savage. "The Destroying Angel" is not a favourable specimen of Harlow; and we cannot like the two affectations of an amateur. "The Landing-place" is a fine subject by Danby, A.R.A., very ably engraved by E. Ratcliffe; and Mr. Brain has done ample justice to a clever drawing by Cattermole. We may not dismiss the volume without a passing word of praise to Miss Camilla Toulmin: her prose is clear, strong, and free of puerilities; she tells a story with deep pathos and power; and has the happy art of exciting interest by the style as well as the matter. Her poetry, too, is very beautiful—graceful and impressive, smooth and full. Another lady, too, we are bound to mention in terms of high respect—Mrs. Valentine Bartholomew, a lady who has attained an enviable reputation as an artist, and whose claims to equal distinction as a poet will be readily conceded. Her poem, entitled a "Village Sketch," possesses great merit.

THE KEEPSAKE—is again edited by the accomplished Countess of Blessington, who—far less by her aristocratic rank than by her ability and popularity as an author—succeeds in obtaining the zealous co-operation of eminent writers, who are proud to appear in her "list of contributors," although it is more than probable they would decline to exhibit elsewhere. Here are Sir Lytton Bulwer, Charles Dickens, Captain Marryat, Henry Hallam, Walter Savage Landor, Barry Cornwall, Horace Smith, Lady Emmeline Stuart Wortley, Mrs. Maberley, Mrs. S. C. Hall, and "though last, not least," the fair editor, whose pen always produces matter for thought, enjoyment, and utility. The "Keepsake" is a book of much value, as a gathering of tales, poems, and essays, some of which are of rare excellence, many of which possess marked and decided merit, and no one of which is below mediocrity. Of illustrations there are thirteen—and, though the phrase is somewhat hackneyed, we may justly and truly say that the name of Mr. Charles Heath is a sufficient guarantee for their excellence. We do not mean that they are of value equal to those of ten or twelve years ago, when the plates of his annuals were absolutely wonderful for elaborate finish, and consequent cost.

Such marvellous refinement of engraving we shall never see again, nor, perhaps, is it needed. The exertions of Mr. Heath are more circumscribed than they were; the public will not pay for months of labour bestowed upon a head the size of a shilling; but he is not likely to issue to the world anything badly or carelessly done. The frontispiece to the "Keepsake" is an engraving by H. Robinson, from Sir W. C. Ross's portrait of the "Queen of the Belgians;" and, to quote another hackneyed phrase, "it is well worth the price of the volume." It is beautiful as a work of Art, and admirable as a likeness—a composition in the purest taste. "The Anglers" is a pretty print, by Mr. Louis David—a youth and maiden sitting by a silent stream, their baited rods idly dipping into the water. It is admirably engraved. The "Coquette," by the same artist, is less pleasing. In both there is much affectation, and little nature and truth. Far, very far better, is the speaking lesson called "The Teacher," from the eloquent pencil of Mr. Redgrave; and how sweetly touching is the fine portrait of a "Young Gleaner," from the delicate and powerful hand of Poole. These are two admirable works—none better were produced when the annuals were in the zenith of their fame. Good, also, is "The Banquet," by Cattermole; capital in character, and rich in humour, is "The Surprise," by Stephanoff—an engraving of great merit by Mr. Frederick Heath. Of "Aline" the less we say the better. It is impossible to compliment Mr. E. Corbould upon his contribution to the work. The drawing of Miss Corboux is a repetition of the eternal "Lella." "A Portrait" is exquisitely and naturally painted by A. E. Chalon; and "The Parting" is another work by Geo. Cattermole. It would be difficult to find any fault with the "Keepsake," which is this year, at all events, superior to the five or six latest of its immediate predecessors.

THE BOOK OF BEAUTY.—This volume is also edited by the Countess of Blessington. It contains thirteen portraits of aristocratic ladies, among whom, however, there is scarcely one who can be characterized as "a beauty." The frontispiece is a copy of Lady Clementina Villiers—one of Mr. Chalon's amalgamations of flowers, ringlets, and lace. Her sister, the Lady Elizabeth, is less *décoré*, but looks as "cross" as if she never had, or hoped to have, a lover. The other portrait-painters who make the book are Mr. J. Hayter, Mr. Drummond, Mr. Bostock, Mr. F. Grant, and Sir W. Ross. The semblances of "beauties" are no doubt very interesting to the great world to which they belong; but to the little world—mankind at large—they are of small value. And this is matter for deep regret. The selection should not be made from family "documents;" the beauties should be such as all may admire or love, without caring to ask the name of husband or father—beauties whom nature has made noble. The literary contents of this volume are, as we have intimated, of a high order of merit.

THE PICTURESQUE ANNUAL.—We have this year again a book about Paris—a "summer," as we last year had a "winter," in the capital of France. It is from the pen of M. Jules Janin, a French writer of distinguished reputation. It lacks the vigour, animation, and originality of the former volume; but it is nevertheless a most interesting and valuable production, full of brilliant sketches of the people, their habits, occupations, and amusements. Every page, indeed, teems with life, bringing the Parisians "body and soul" before us. Mr. Heath has not only added to the fame and popularity of his "picturesque series" by introducing these two books into it; they are contributions to our literature—useful and instructive helps to comprehend our nearest and most important neighbours. We refer not alone to the printed contents of the volume, the pictorial illustrations are admirable. They are eighteen in number, and are singularly full of matter—heavy and laborious works for the engraver, yet they have been, with one or two exceptions, admirably engraved. The frontispiece represents one of the grand staircases at Versailles, thronged with visitors to the *fête*. The next is of a very opposite character—the meeting of the hounds in one of the parks. Next we have the interior of an opera-box; next the aisle of a cathedral; next a promenade at Longchamps; in short, the subjects are skilfully and judiciously varied, representing Paris

\* We must premise, however, that the specification of Mr. Hancock we have not seen.

during summer under all its seductive aspects, where the chief business is pleasure. The artist is M. Eugene Lami, who occupies a high rank among the painters of France. His abilities are unquestionable. He manages to exhibit genius in depicting the most literal of facts; his groups are arranged with masterly skill; and his drawing is accuracy itself.

[We should observe that "proof impressions" of the illustrations to these three volumes are published by Mr. Heath. Those of "The Keepsake" and "The Picturesque Annual" are undoubtedly of great beauty and merit: that we so consider them, at all events, our observations will have shown. Among the former are several excellent examples of British art, admirably rendered by good engravers; and those of the latter are of the highest interest and value.]

**FISHER'S DRAWING-ROOM SCRAP-BOOK.**—This book is associated with a pleasant yet a painful memory. It was here—in the earlier volumes—that Miss Landon laboured for years, and where some of the most beautiful and valuable of her poems are to be found. Subsequently it was the "pet" of a kindred spirit, Mary Howitt. Now, and during the last year or two, it has been edited by Mrs. Ellis, a lady who has obtained considerable celebrity; and rightly, if we may judge of her merits by the fact that a book written by her under the title of "The Women of England" has gone through several editions in the course of a few years. In the manufacture of "The Drawing-room Scrap-book" she has a very arduous task to perform. She discharges it respectably—it is impossible to say more. To write thirty-six good poems to illustrate thirty-six prints is a labour to which a genius like that of poor L. E. L. is alone capable. The poetry here is pleasant and graceful, such as cannot be objected to: it is written with sound taste and right feeling, and is such as all parents will be pleased to place in the hands of the young; for of the purity and uprightness of Mrs. Ellis's mind every page supplies proof. The volume is admirably calculated for a "gift-book," a large collection of interesting and valuable poems, accompanied by graceful and instructive prints, elegantly bound—and all for the sum of one guinea!

**THE JUVENILE SCRAP-BOOK.**—Edited by Mrs. Ellis. We are far less pleased with this volume; neither the prints nor the letter-press are of a character suited to the young.

**THE GIFT, 1844.**—This volume comes from the other side of the Atlantic; it is published by Carey and Hart of Philadelphia, and would certainly have done no discredit to "the old country." It is bound with peculiar elegance, and is of the larger size; neatly printed, and being altogether a very beautiful production of the press. As to its literary contents, we are not quite sure that we are not compelled to rank them above those of either of our own; the authors seem to have taken more pains with their work; and not to have been content to let weighty names stand at the head of mere nothings. Some of the poems—those of Mrs. Sigourney especially, are of a very high order; and the prose tales and descriptions—such, at least, as have the scenes laid in America—are full of matter, racy, strong, and original. The book contains eight prints, from the paintings of Sully and Inman, both of whom are known to us; and Huntingdon, Cheney, Mount and Page, who are as yet unknown in England. They are very nicely engraved, and possess considerable excellence in design as well as in execution. The best describes an incident in "the early days of Washington." It is a fine engraving from the burin of W. Humphreys.

**THE MUSICAL BIJOU.**—We have yet to notice another annual; and we may speak of it as a work of Art. It is "got up" with pure taste; the splendour of the embellishments has been hitherto unsurpassed; but gorgeous as they are they are also good. These embellishments are printed in colours and gold by M. and R. Harbart, and certainly surpass anything of the kind we have yet seen issued—in England, that is to say, for hitherto our Continental neighbours have gone far beyond us in this beautiful art. The "Musical Bijou" is published by D'Almaine and Co., Soho-square, and does credit to an establishment famous all the world over.

We have thus given to the Annuals all the space we can spare.

## CORRESPONDENCE.

## THE THREATENED CARTOONS.

DEAR SIR,—Permit me to offer a few words in explanation of the motives for the publication of certain of the Cartoons; which proposed publication, together with that of the fortunate ELEVEN, has called forth your reprobation, upon the assumption, that "in the next three years the eleven will be heartily ashamed to look at a copy of the work bearing the date of 1843;" an assumption which, if carried out to its full extent, would form a parody upon Penelope's web, by condemning all artists to occupy some portion of each year in effacing the pictures they had painted during the twelvemonth preceding.

On the first day that the Exhibition at Westminster Hall was opened to the public, I was informed that it had been arranged to publish the eleven prize Cartoons with considerable "pomp and circumstance." Considering that the attention of the foreign schools of painting had been excited by the proposed competition, I felt that the proposed publication of the prize Cartoons would be looked for with great interest and curiosity, both in Great Britain and on the Continent, as a fair sample of the best works that British artists could produce.

One of the £300 prizes was given to an élève of the French school; and this appeared to be considered the best production,—by the course adopted of placing the classes of prizes according to their numbers in the catalogue instead of their relative merit, a most cruel and unjust course (though one which placed my "Una at the Court of Gloriana" at the head of the second lot of £100 prizes, which it by no means deserved), for it had the effect of placing Mr. Severn's cartoon of "Edward and Eleanor" at the bottom of the list of the five £100 prizes, when, in reality, it was the first selected; and placed Mr. Cope's "Trial by Jury" below the production of the élève of the French school, and Mr. Watts' "Ritaccamento of S. Rana" from the Old Masters, both of which it ought to have preceded. If this course was adopted inadvertently, it was cruelly thoughtless; if from fear of decaying upon the relative merits, it was unjust. I felt that the natural conclusion to which, in the absence of other material evidence, all parties must come, would be this, that a two years' student in the French school could surpass all that British artists could produce; and that the best they could do without Continental assistance was, to rake together some fragments of Domenichino, Rubens, &c.; while the character of the works produced in answer to the call for those of high class "to regenerate the British school," and raise it from picture-making to a worthy exercise of the Fine Art, was the most commonplace historical, and without the slightest shadow of pretension to the high class of Art, except in the above-mentioned "Ritaccamento," by Mr. Watts; and that the eleven cartoons would go far to confirm Dr. Merz' disparaging assertion. Conceiving that this impression would be the infliction of a gross injury to the Arts, and an insult to the artists of this country, I lost no time in urging those to whom I had access to publish their cartoons for the honour of British Art, and thus to give the public, at home and abroad, the opportunity of testing the accuracy of the decision pronounced by the judges, and of forming more accurate estimates of the capabilities exhibited in the first attempt in a style to which so few British artists had been accustomed. Bell, Cope, Severn, Haydon, and Sir W. Ross, are, I believe, the only candidates who have attempted any works of the kind; and it is precisely because it is a first attempt that I am desirous of having all the best cartoons published, to show the Continental schools and the patrons of Art in this country, that we could do all that ever has been done in any age or any country, and all that can be required, if we had encouragement and opportunity; and that we have not done so, is only because we are chained, like galley-slaves, to the drudgery of pleasing an uninformed public, by the necessity of living by our profession.

"Those who live to please, must please to live."

My wish was to induce each artist to lithograph his own cartoon, as thereby ensuring the production of the full effect intended; but this I have not been able to accomplish, except in one instance, that of Mr. Walter, who is proceeding very successfully with his. Some of the others I have given my best attention to, so as to make them, as nearly as possible, fac-similes of the cartoons. After I had set this proposition on foot, the ten additional prizes were awarded; and it was immediately suggested to make a distinct publication of them, to be followed by a few others, published separately. I had completed my "Bruce's Escape from the Retreat from Dalry," and seeing no reason for delay, have already placed that before the public; and it will form a sample of the style and scale in which the ten additional prizes will be produced at Christmas, viz., one inch to the foot, and the precise tint of the cartoon, as exhibited. This size was adopted as quite sufficiently large to afford a perfect transcript of the expression and character, while the object being extensive circulation, that was most likely to be attained by the least expensive mode of publication compatible with the due execution of the work; and I have no fear that any of the artists, whatever celebrity they may hereafter attain, will have any reason, at any time, to be heartily ashamed to look at a copy of "our" work that

bears the date of 1843. *Suum cuique.* Let the eleven defend themselves. Yours truly,

Tonbridge-place, Nov. 1843. FRANK HOWARD.

[We have given Mr. Howard the amplest opportunity to say his say. That was our duty; it is a duty from which we have never shrunk. We have got ourselves into hot water, not only with "the Council of Ten," but with the "fortunate ELEVEN," who have waxed very wroth with us for insinuating that in the year 1846 they will be loth to acknowledge their bantlings born in 1843. Well—we shall see; but we must wait three years until judgment can be pronounced for or against us. We have very little apprehension as to the result, and might indeed be content to take a verdict two years earlier than the time named. The exhibition of cartoons was, as we said and repeat, eminently successful—altogether satisfactory; as a first experiment it was a complete triumph, honourable alike to the artists who competed and to the country. But our *peccan* would have been haunted in another note if we had been given to understand that the eleven cartoons were to be preserved among the archives of the nation, as permanent examples of the capabilities of British Art. So, therefore, do we regret that copies of them are to be sent all the world over—as our *PERFORMANCES*, sanctioned and rewarded by the British nation—after a solemn invitation to all British artists to compete—and who are therefore assumed to have competed—of which this book of eleven lithographic prints is at once the evidence, the record, and the result.]

## MR. HAYDON'S COMPLAINT.

14, Burwood-place, Connaught-terrace,  
Nov. 12, 1843.

SIR,—I did not intend to answer your censure on my advertisement, relating to my cartoon of "The Curse;" but as I think it exceedingly unjust, and as one does not like such an accusation to rest on record in a very amusing and useful journal of Art without an answer, after mature deliberation I request leave to reply.

Right or wrong, I considered myself unjustly treated by the Royal Commission, and so evidently did you. At once I addressed myself to the people, who were crowding to Westminster Hall by thousands, as I have always done on matters of Art, and desired them to look at "the guilt of Adam, the agony of Eve, the defiance of Satan," &c. &c. &c., in the cartoon of "The Curse." You assented this mode; called it a criticism, which it was not, and said it was disgusting for an artist to criticise his own works, and brought disrepute on the Art.

It is disgusting for any man to criticise his own works; and not only have I never done this, but, except on the cartoons by my pupils, 1819, and those of this year, 1843, I never criticised any living artist's works, directly or indirectly, and I defy any editor of any publication—daily, weekly, monthly, quarterly, annual, or septennial, for forty years—to prove the contrary.

My allusion to "The Curse" was an explanation of my intentions, leaving the people to discover and criticise; and if all historical painters would do the same, many mistakes would never happen: it would teach the people what to look for, and do their taste good.

In conclusion, you say "if I had less vanity and more pride, it would be better for me." Would it not have been truer to have said, "If I had less sense of justice and more pride?" I am sure it would. I admire the discrimination which dictated the first, but I should have estimated it higher if the second had been your own as well as the first.

It is my conviction that painting the nobility and sovereigns of Europe for forty years on tiptoes, and advertising for precision of drawing and knowledge of construction as the requisites for a cartoon, and then bestowing the highest rewards on cartoons which had no knowledge of construction and no precision of drawing at all, is much more likely to bring disrepute on the Art, and discouragement to the student, than my straightforward appeal.

Yours, &c., B. R. HAYDON.

## KEEPER OF THE NATIONAL GALLERY.

SIR,—The appointment of Mr. Eastlake to be Curator of the National Gallery was very naturally welcomed not only as a gracious act, but as a considerate and judicious selection, by all who feel an interest in the Fine Arts, and know the importance of the duties to be discharged. To information extensive, various, and profound, with great original powers, a fine and pure taste, and an experienced judgment, Mr. Eastlake unites zeal, a liberal spirit, and most upright understanding. One would imagine gifts like these would be at least respected, and their employment in the public service honourably welcomed. But

"Envy will Merit, like its shade, pursue,  
And, like the shadow, prove the substance true;  
And its first withering blight has been exhaled through  
the columns of the *Times*, in the shape of a letter signed "An Amateur."

This writer would induce one to believe he is a friend to the Arts; but "the voice is Jacob's voice, and the hands the hands of Esau." He is a friend of the Arts—that is, of the *dealers in them*. He is for their promotion—that is, of *their sale*. This, if it be not his warrant, is at least his *commission* for writing. If the vindictive nature of his spirit were not observable, we might be led to suppose he was facetious, and that he had written, like Pontius Pilate, *what he has written*, not in his spite, but after dinner—in an accidental moment of forgetfulness, at least of propriety and common sense, if not of self-interest.

Do but imagine the grounds of his opposition. In A.D. 1834, Lord Liverpool, it appears, being then in a sound state of mind, wrote a memorandum upon the appointment of Curator to the National Gallery to this effect:—

"Lord Liverpool is of opinion that the person to be appointed to this office should be competent to value and, if called upon, to negotiate the purchase of any pictures that may be in future added to the collection."

Anything more common sense it would be difficult to conceive. In fewer words it is: the Curator of the National Gallery should be—a PICTURE-DEALER? No such thing; but a gentleman fit for the office. And yet upon this the *Times* amateur founds his opposition. Why? Because Mr. Eastlake cannot RESTORE pictures—because, not being a dealer, he is not practised in names, dates, and prices, does not know at what auction this Salvator was disposed of, or how that Hobbema was procured. As if one should say of an architect, "What! he is capable of being an inspector of the state of public buildings! Why, he does not know the market price of bricks. He is utterly ignorant who sold this estate, whether Christie or George Robins. How, then, can he judge of architectural beauty?" And then, too, we have—Mr. Eastlake is a pluralist, because he is the Secretary of the Royal Commission and the Librarian of the Royal Academy! This last appointment certainly might convict him of a kind interest in the interest of others, but would hardly convince any capacity except the capacity of "An Amateur" that he was a pluralist. I will not dwell upon the hint that if Mr. Eastlake accept the office of Curator he can never aspire to the Presidency. In the first place, it is needless to argue a contingent question, and, were it so, the meanness of the hint is worthy alone of the low language in which it has been couched. It is a parody upon the Devil bearing witness against Job. The writer cites some most respectable picture-dealers for whom he seems inclined to canvass, and, if one might judge from his prose, for I am unwilling to term it his poetic effusion, he ranks them next to Raffaele, Buonrotti, or Da Vinci in their importance to the Arts. I have not the slightest desire, I am sure no reason, to undervalue the services, the knowledge they have rendered, and possess; but to say they alone are judges, they alone can purchase or protect the productions of Art, would be a flattery so gross such as no men would more readily disavow than the Woodburns and Smiths of England. The case is simply this:—Is Sir Robt. Peel as competent to judge of such an appointment as Lord Liverpool? Is Mr. Eastlake as able to judge of a picture as Mr. Farrer? These were the competitors, such was the judge. Who can doubt the propriety of the verdict?

I am, Sir, your obedient servant, Q.

[Our correspondent has anticipated our comments upon the letter referred to. Perhaps no artist ever lived in this country who so thoroughly enjoys the respect of the public and the profession, nor is there any gentleman living in whom both may place more entire confidence. It is high time that mere dealing jobs should be put a stop to. Mr. Eastlake can lend himself to nothing that is not in every sense of the term pure. It is a great achievement to have procured such a man for such an office. As we have stated elsewhere, the only drawback is the fact that he will give to its duties far more time than he is paid for, and thus too much and too often desert his easel. The income attached to the office is very trifling; less than Mr. Eastlake might make by a month's labour with his pencil. All who know him must know that this matter can have formed no item of consideration in inducing him to accept the appointment.]

#### IMPROVEMENTS IN FRESCO.

DEAR SIR,—If at this advanced period of the month there can be inserted in the forthcoming number of the ART-UNION a few lines on a subject that is just now creating some interest in the world of Art, I should feel very greatly obliged.

It is some years since I directed my attention to the practice of fresco-painting, more with the view of finding some means of obviating the peculiar disadvantages that attend its execution than of following it as a pursuit. It immediately occurred to me that all these disadvantages were entirely referable to the unmanageable nature of the *intonaco* generally made use of. To this point, therefore, I directed my exclusive attention, and I am now enabled to state that the superficial mortar can be applied in such a manner as shall retard its solidification for almost any period that may be desired. By this method the painting is rendered capable of being retouched for several successive days. The different applications of the *intonaco* may be applied so that the smallest trace of the junction shall not be perceptible, and the process of glazing is to the full as practicable as it is in oil painting. I furthermore engage to execute the entire process before any persons acquainted with what is termed "*Buon fresco*," and they shall perceive no difference in the operation.

If you will oblige me with the necessary space in your journal, I will, at an early opportunity, enter more fully on the subject.

I am, my dear Sir, yours truly,  
THOMAS F. HEAPHY.

[We shall readily afford to Mr. Heaphy the space he may require to treat so important a subject.

#### VARIETIES.

THE NEW ASSOCIATES.—The Royal Academy have elected as associates C. W. Cope, Esq., and Thomas Duncan, Esq., S.A. Against this election it will be very difficult to object. Mr. Cope has been gradually gaining professional ground. His abilities have been acknowledged and appreciated by the public; he is held in high esteem by his brother artists; and in the recent allotment of prizes for Cartoons, his work (unquestionably the most popular of the whole collection) obtained a first premium. We rejoice, therefore, that the distinction has been conferred upon him, and imagine that it will give very general satisfaction. To the appointment of Mr. Duncan there can be but one objection. He is an artist of the highest talent, and his works have done honour to his native country; but as a member of the Royal Scottish Academy, residing in Edinburgh, he enjoys peculiar advantages—advantages in which his English compeers cannot participate. Last year Mr. Watson Gordon was elected into the Royal Academy under precisely similar circumstances. Now, unless it is certain that these artists possess higher talents than any of the English candidates (a point we are by no means willing to concede), there may be some REASON in the objection. At all events, Mr. Duncan is an acquisition to the Royal Academy, and an artist of whom any country may be proud. The 'Entry of Prince Charles into Edinburgh' is a painting of the highest merit; and his production of last year, the 'Escape of the Pretender,' won him golden opinions. Both these works are in the hands of engravers—the former in those of Mr. Bacon, the latter in those of Mr. Ryall; and they will be, ere long, published by the liberal and enterprising Scottish publisher, Mr. Hill of Edinburgh.

C. L. EASTLAKE, Esq., R.A., has been appointed to succeed Mr. Seguer as Keeper of the National Pictures. The appointment has been universally praised. The pure character, extensive erudition, and high genius of this accomplished artist are calculated to confer—and will undoubtedly confer—additional importance on the office; and the selection is considered to be one pregnant with immense benefit to the Arts. For our own part, however, we may not accept it as matter for entire congratulation. We cannot doubt that the occupation consequent upon the due discharge of official duties will force the great English painter far too frequently from his easel; and therefore apprehend that, in the zenith of his fame and the vigour of his mind, he will contribute too little to the hereafter of British Art. It is notorious that, during the last two or three years—the time of Mr. Eastlake having been so much occupied by "business" connected with the Royal Commission—the productions of his pencil have been few, and of comparatively minor importance. We looked, hopefully, to his withdrawal from the Commission, as a means by which the world was to be enriched. We fear that now his mind and time will be necessarily occupied away from his studio; and are selfish enough to think more of the loss we sustain in being deprived (as we must be to a large extent) of our great painter than of the advantages that may arise to us out of his pure taste, sound knowledge, and sure integrity, as the national connoisseur.

SIR AUGUSTUS CALCOTT, R.A., has been appointed Conservator of the Royal Pictures—an appointment held by the late Mr. Seguer, in conjunction with that of Keeper of the National Gallery. This is an appointment in every way desirable; neither the years nor the health of the artist warrant the expectation of his producing many more great works, and the post is a comfortable provision for age, a small reward—yet a sure one—for a life of honourable labour.

THE TWO APPOINTMENTS given by Sir Robert Peel to two accomplished painters may be

received as a new compliment conferred upon the Profession by the Premier. The nominations were, we know, not only unsolicited, but totally unexpected; they were designed as honorary distinctions and substantial rewards for merit; and may therefore be accepted as auguries of better days to come. In this country, unhappily, artists and men of letters have been too generally regarded by the state as useless idlers—mere drones in the busy hive. Statues and Parliamentary thanks and national grants in abundance have been lavished on British sailors and soldiers and statesmen; while those who really make a country glorious have been passed by with indifference or contempt. We are on the eve of better days. Let us receive the first proof of it with thankful pride.

THE COMMITTEE OF THE HOLKHAM MONUMENT have advertised for designs,—that is to say, for a column. They might as well have borrowed a copy of the one in Trafalgar-square at once.

THE ARTISTS' AMICABLE FUND.—On the 6th of Nov. this agreeable and useful Society dined at the Crown and Anchor Tavern, W. J. MASON, Esq., in the chair, supported by several distinguished artists, among whom were a few of the original members of the parent "Fund." About 150 members sat down to dinner. The Report—a very brief but very cheering document—was read by the Secretary, Mr. Wagstaff. It described the Society as having acquired numbers and strength during the past year beyond the most sanguine hopes of its projectors.—[Upon this subject we have received three or four communications. We must refer our correspondents to the Secretary—a most kind and courteous gentleman, who will pay prompt attention to their requests, and fully explain the nature and objects of the excellent Institution.]

MR. WILKIN'S LECTURES.—During the past month a series of lectures on perspective has been delivered by Mr. Wilkin, at his residence in Newman-street. Books are continually published, professing to teach perspective by means of elaborate and complicated geometrical theses; but their interest is superseded in this, as in every other branch of knowledge, by the *vitâ voce* precept, accompanied by practical example. The lecturer is perfectly master of his subject, and a main purpose with him seems to be a simplification of the study. He addressed himself particularly to students of architecture; but there were in the syllabus many heads interesting to artists of all classes—as his method of drawing rapidly and correctly the human figure in exact proportion, be the scale what it may; his treatment of light and shadow in landscape, sea views, and the human figure, &c. &c. As an instance of Mr. Wilkin's ready disposal of difficulties, we may mention his method of drawing a geometrical staircase of eight steps, winding round an octagonal column. This he demonstrated with an unusual paucity of lines and points; but, with regard to such a series of lectures, we would suggest that each lecture should either be lengthened, or contain fewer demonstrations.

THE NATIONAL GALLERY.—The National Gallery is re-opened, after having been closed for six weeks, during which time most of the pictures have been slightly cleaned, and some trifling changes have taken place. The cartoon by Raffaele, which was added last year and placed on the staircase, is now hung in one of the rooms; and since our last notice, a portrait of Mrs. Siddons, by Lawrence, has been presented to the Gallery by Mrs. Fitzhugh, for whom it was painted. We do not, however, conceive the portrait an acquisition to the collection, inasmuch as it is vulgar, and seems to have been slighted in the execution.

THE PRINT PUBLISHERS of London have signed an address to Sir Robert Peel, on the subject of Art-Unions, requiring the interference of the Legislature to arrest their further progress, as inimical to the Arts, and prejudicial to the

interests of a large and highly respectable body, who have embarked large capital in the publication of prints. Their application to the Premier is grounded chiefly on the opinion of the Attorney-General, Sir William Follett, who considers Art-Unions (such, that is to say, as were brought under his consideration) to be decidedly illegal. This opinion, however, was confined to trading speculation, and not to societies banded for public benefit, and with no view to private gain. Mr. Chitty agrees with Sir William Follett. It is not improbable, therefore, but that the Legislature may be called upon to move in the matter. It would appear, however, that its interference will not be required; for, as one example—

THE NATIONAL ART-UNION has been a decided failure; the loss to its projectors being very considerable. Instead of 20,000 tickets having been sold, we have reason to believe that the sale will fall short of 3000. While the expenses must have been very great, inasmuch as they were proportioned to the anticipated success. We are assured nevertheless that the secretaries to this Art-Union will keep implicit faith with their subscribers—will perform their contract to the letter. The “drawing” is fixed to take place on the 18th of December, previous to which a list of the subscribers will be printed, with the number of the ticket appended to each name.

THE SHEFFIELD ART-UNION has also been a dead loss to the projector, Mr. Gilbert. Whether Mr. Boys’ ART-DISTRIBUTION has been a gain or a loss we cannot say; but we have now another in the field:—

CERTAIN PICTURES OF HIGH IMPORTANCE (all old masters) are exhibiting at No. 53, Pall-mall, which are to be distributed hereafter “according to the principles adopted by the Committee of the Art-Union.” Into this subject we shall enter next month.

THE COPIES from Pictures left in the British Institution, have been exhibited in the gallery during the month. Some of them are very creditable to the copyists; but we must again express our regret that they are converted into a public exhibition.

THE BRITISH INSTITUTION.—It will be observed, that the time for receiving pictures has been announced; but we have not heard if the Directors intend this year to bestow premiums. A principal keeper must be elected in the room of Mr. Seguer. It is a paid office, and the income we believe is, or ought to be, considerable. We have heard three or four candidates named. Surely the Directors will follow the example of the Government, and appoint an artist of high talent and high character to superintend this most important Institution.

THE ART-UNION OUTLINES.—We have received thirteen of the series of “twenty-two Designs in outline, illustrative of the Pilgrim’s Progress.” The series is to be presented to each subscriber (of the current year) to the Art-Union of London; and the subscriber is to receive, also, a line engraving, by Mr. E. Goodall, from Stanfield’s picture of ‘Castello D’Ischia.’ This is certainly a marvel. The print cannot but be a valuable work. We remember the picture as very beautiful and interesting; and Goodall ranks among the very first of our British engravers. Of these “outlines,” however, we may speak with certainty—they are before us. Our readers know that they are the designs of Mr. H. C. Selous, and that they have been engraved by Henry Moses, an artist who, in his particular department, is unrivalled. The designs of Mr. Selous demand the most unqualified praise. They are of wonderful merit. It is, indeed, impossible to speak of them in terms beyond their deserts. There is nothing like a slavish imitation about them. If they occasionally remind us of Retch, it is merely because there is a resemblance in the style in which they are produced. They are as entirely original as the most original of the outlines of the great German, and there is not one of

them to which he might not have been proud to have affixed his name. This is high praise, but it is called for. We have seen few English works that deserve it more heartily. The set will be well worth a guinea; and many thousand guineas will be subscribed to obtain copies as soon as specimens are extensively seen. Mr. Selous has done himself immortal honour. He will take his place among the master-minds of England; and is already one to whom we should refer when protesting against being considered inferior to our neighbours. Sure we are that these twenty-two outlines will be universally considered as of more real value than all the prints which all the Art-Unions have hitherto issued. The Art-Union of London has undoubted right to the full merit of this great move in advance. Until their premium was accorded to Mr. Selous, his name was unknown. He has since obtained one of the prizes for Cartoons. We are this month compelled to limit our notice to a general impression of the series. We shall next month examine them in detail.

### REVIEWS.

A SERIES OF COMPOSITIONS FROM THE LITURGY. By JOHN BELL, Sculptor. Publishers, LONGMAN and Co.

The series commences with six designs from the Lord’s Prayer; they are engraved in outline, and calculated for execution in bas-relief. They bear throughout, the impress of exalted sentiment, inasmuch even as to approach Flaxman, to whom perhaps they point too directly. ‘Our father which art in Heaven, hallowed be thy name,’ is rendered into a group of three figures in the attitude of prayer, as a title to which the latter words of the passage are superfluous. The figures are those of an old man, a young man and woman, and a child. The grouping of the three last figures would tell well in marble, but it would be necessary to make the arms of the young man more in proportion to their length, being now much too heavy. In ‘Thy kingdom come,’ a group of four—the Saviour, a standing figure, is blessing a mother and her two children, who are kneeling before him. This plate seems rather to have been intended to embody the passage from St. Matthew—“Suffer little children, and forbid them not, to come unto me; for of such is the kingdom of Heaven.” ‘Thy will be done on earth as it is in Heaven,’ is expressed by a group of five figures—parents and children—the former kneeling facing each other, and contemplating the three children who are between them. The group is undoubtedly distinguished by many of the highest attributes of Art, but it bespeaks sentiments too wholly earthly to be a just translation of the passage—it is a picture pointing to nothing beyond the temporal happiness which it so fully describes. The group presents a daring formality of composition, the heads and the lines of the limbs upon both sides corresponding. ‘Give us this day our daily bread,’ is pictured by an angel giving bread to a family of three persons; and ‘Forgive us our trespasses as we forgive them,’ &c., by a group of three—an angel, and two persons in the act of mutual forgiveness—the latter embrace each other kneeling, while the angel records the reconciliation. ‘Deliver us from evil,’ is a composition of great spirit, although in minor incidents betraying a too close imitation of Michael Angelo. Many may remember the two hands rising from the water in the cartoon of Pisa. Depth is here expressed by two eager and nervous hands striving after two souls rescued by a good spirit, who drives down with his uplifted brand the malignant spirits by whom they have been pursued. The whole is admirably conceived, but it is unworthy of such a mind as that of the author of these beautiful outlines to give to the evil spirits in such compositions talons instead of fingers and toes. It is not enough to say that this has been done by the greatest men in the Art—this ought to have been one argument for eschewing it. The grossness typified by this, injures the feeling of the rest of the work; absolute perdition had better been the allusion, and ordinary hands and feet had been sufficient for this. With some errors, however, we have of late seen nothing to equal these out-

lines. Mr. Bell may bear to be found fault with, for his merits vastly overbalance his defects. He manifests in his compositions both power and taste—a vigorous and a refined mind; and is surely one of the young men who are destined to produce great works for the honour of the British School. We shall have an opportunity of recurring to this publication, of which we have before us part the 1st, issued at a very cheap rate.

It is published by Messrs. LONGMAN and Co. We rejoice to meet this honoured and respected name associated of late with several publications appertaining to the Fine Arts. In these days it is a huge matter for artists to find they may be connected with an establishment famous, for a century, and all over Europe, for integrity and liberality. To this house British literature is largely indebted; it is most cheering to find that British Art is likely to owe it as large a debt.

DARBY’S MAP OF LONDON. Published by DARTON and CLARK.

This is a pocket map, and is accompanied by an index of streets, public buildings, societies, banks, &c. &c.; having also marked upon it all the railway and steam-boat stations. Such a guide is indispensable to the stranger in London, and at all times highly serviceable to the inhabitants.

A MANUAL OF PERSPECTIVE. By J. WOOD, jun. Published by WHITTAKER and Co.

A small work of thirty-four pages, illustrated by diagrams, and explaining the principles of perspective, the projection of shadows, &c. &c. The work is intended for the use of amateurs, and contains in the “concluding remarks” a few valuable hints on the perspective of animals and natural objects. It is a simple and unpretending little volume; which contains little or nothing that is new, but very considerably simplifies an intricate subject so as to render a knowledge of it comparatively easy. This notice will perhaps be a sufficient answer to our correspondent at “Cardiff,” and indeed to others who have lately consulted us concerning some such elementary work.

### NOTICE TO SUBSCRIBERS.

With the new year we design to commence a New Series of “THE ART-UNION,” into which we purpose to introduce several important improvements. We must premise, however, that our publication will be, in future, issued without a stamp. We have good reasons for believing that this change will prejudice very few. We know that seven out of eight of our numbers do not go through the post at all, for the great mass of our subscribers in town and country prefer receiving them “by hand,” through booksellers’ parcels, which they may do regularly on the first day of every month. In passing through the Post-office the publication becomes creased and soiled; and, as it is—we presume to say, invariably—preserved for binding, most persons prefer the somewhat less prompt but equally sure and much more satisfactory mode of private delivery. We have thus been paying for between 2000 and 3000 stamps monthly (as the Stamp-office returns will show), while to seven out of eight of our subscribers the stamp was utterly useless.

It is then our intention to expend the £10 or £12, thus gained, in certain improvements, which we are sure will tend to our own advantage, and give very great and general satisfaction to our subscribers. These improvements will be best developed as we proceed; but in order that no subscriber may be compelled to take us on trust, we announce these changes with the part which finishes a volume.

These improvements we could not effect without avoiding the cost of the stamp; for although our circulation is great, and we have received a very considerable share of public patronage, our expenses are proportionably large. We intend, then, to issue future numbers of the ART-UNION on fine paper, “hotpressed,” and printed partly “by hand,” so as to give due effect to the wood-engravings we mean to introduce into it extensively. Its present form will not be altered, except that the margin will be somewhat enlarged, and it will be stitched and “done up” by the binder. With each month’s number we shall give a variety of wood-engravings, illustrative of our own articles, and borrowed from illustrated works, published in England, Germany, and France; and with each part we shall issue an engraving of some subject, either procured from a current publication or descrip-

tive of some public work in progress. For example: in our number of January we have arranged to publish two of the very famous wood-engravings of the "Nix-Belungen," and one of the prints from the "Oriental Sketches" of Sir David Wilkie, with a variety of other engraved subjects. These it would be impossible to transmit through the post without damage to them.

We shall also endeavour, by a liberal and judicious expenditure, to give essential improvements to our Literary "Contents." Our "Foreign Relations" have very materially augmented. Enlarged experience will be added to increased means. Success—when not too great or too easily obtained—is the surest stimulus to exertion. In short, we shall give to our Journal a much greater value, and have entire confidence that it will be appreciated. It may be well to state clearly, that there will be no increase of price.

Among other new features and improvements we may refer to one, which will be indicated by an addition to our title; it will be hereafter styled "THE ART-UNION, A MONTHLY JOURNAL OF THE FINE ARTS, AND THE ARTS DECORATIVE AND ORNAMENTAL."

The Editor will gladly receive and reply to communications (addressed 132, Fleet-street), from those who may not be enabled to arrange for the regular supply of the ART-UNION. The Publisher will undertake that it shall be delivered on the 1st or 2nd of the month in any part of Great Britain and Ireland.

**A CAUTION.**—We have been requested to caution artists against the scandalous and disgraceful attempt of a writer for a Birmingham newspaper to cajole them out of paintings, drawings, or sketches. This person has written letters to several artists in London (two of them are before us), the object of which is so to practise on the hopes or fears of the parties he addresses, that they shall "present" to him some "specimen of their abilities," as payment for the past and retaining fee for the future. We are by no means sure that these letters do not furnish ground sufficient to prosecute the writer for striving to extort money (or goods) under false pretences. At all events this timely exposure may secure artists against the danger of being robbed with impunity; and inform the proprietor of the paper in question of the dangerous and disreputable position in which his "critic" has placed him.

An attempt of a like nature has recently been made in the metropolis. A person prints what he calls "Criticisms on the Royal Academy Exhibition," upon which he fixes the price of 6d.; soon afterwards, he calls upon A B (whose works have or have not been noticed), "asking" him to buy 20 or 30 copies.

**DIMES and ELAM, ARTISTS' COLOUR-MEN,** and Manufacturers of every Material for Drawing and Painting, No. 91, Great Russell-street, Bloomsbury-square, London.—**SUPERFINE PERMANENT WATER COLOURS:** D. and E. beg to offer their colours to the notice of the amateur and artist: being prepared in the purest and most careful manner, they will be found to possess freedom in working, together with brilliancy of colour, and are warranted not to contain any deleterious matter, being made of the finest colours to be obtained. Half-cakes, half price.—**MOIST WATER COLOURS.**—Dimes and Elam's Canvas prepared with India-rubber Ground (for Oil-painting). **Rand's Patent Collapsible Tube** filled with Oil Colours, all sizes. A large assortment of Lithographic Drawing-books by Harding, Bright, Cooper, Julien, Prout, and other masters. Dimes and Elam's Circulating Portfolio, containing specimens of the first masters in landscape, figure, and flowers: terms, £1. 1s. per quarter, or 2s. 6d. per week. French Studies of Heads by Julien, &c. Card plates engraved and printed. Drawings, prints, and paintings framed, glazed, and mounted.—Near the British Museum.

#### E. G.'S TRACING PAPER.

**THE** Proprietor of the above begs to return his grateful acknowledgments for the extensive patronage afforded by Artists, Surveyors, Engravers, Civil Engineers, &c. &c.

The consumption being much greater than anticipated by the manufacturer, extra hauls have been employed, and he can now promise that the demand shall be better met than formerly; and, although it is allowed to be superior to any paper of the kind yet introduced, he thinks that his present improvements, combined with the very moderate price, will put competition quite out of the question.

N.B.—Every sheet of E. G.'s Tracing Paper is stamped thus—

Sole Agent—T. HORNE, Seal and Copperplate Engraver, 2, Thanet-place, Temple Bar (late of 233, Strand).

**MESSRS. H. G. CLARKE** have this day published—

1. WOMAN'S WORTH; or, Hints to Raise the Female Character. Fcp. 8vo., cloth. Price 4s. 6d.
2. THE MARRIED STATE—its Obligations and Duties. 18mo., cloth. Price 2s. 6d.
3. MUSIC EXPLAINED TO THE WORLD; or, How to Understand Music and enjoy its Performance. Fcp. 8vo., cloth. Price 5s.
4. THE PHYSIOLOGY OF LOVE, with Hints on Courtship. Fcp. 8vo., elegantly bound, 3s. 6d.
5. A LOVE GIFT for 1844. White silk, 3s.
6. HARRISON'S GARDEN ALMANAC AND FLORAL CALENDAR for 1844. Price 1s. 6d., Old Bailey.

This day is published, Part XX. of **RYALL'S CONSERVATIVE PORTRAITS**, containing Portraits and Memoirs of HIS GRACE THE DUKE OF MONTROSE, P.C.; THE RIGHT HON. VISCOUNT SANDON, M.P.; THE RIGHT HON. LORD STANLEY, M.P.

The Portraits are all beautifully engraved from the pictures in the possession of the distinguished individuals whom they represent. Size of the Engraving, 9½ inches by 7½ inches; and the Memoirs supplied by a Gentleman of high literary attainments, and sound Conservative principles. Royal folio, India Proofs, 21s. Royal folio, French Proofs 18s. Imperial quarto, prints, 12s.

London: George Virtue, 26, Ivy-lane.

#### NEW GERMAN AND ENGLISH DICTIONARY.

Ready, 12mo., 766 pages, price 9s., bound and lettered, **AN ABRIDGMENT OF FLÜGEL'S COMPLETE DICTIONARY OF THE GERMAN AND ENGLISH LANGUAGES.** For the use of Schools and Travellers. English-German and German-English. Abridged especially for the English Student. By C. A. FEILING and JOHN OXENFORD.

The great success which has attended the publication of the English edition of Flügel's Dictionary has induced the proprietors to undertake the present abridgement of it, which they trust will be found adapted to the wants of the large number of persons who study German chiefly that they may be enabled to travel on the Continent without inconvenience, as well as of younger students, for whom the larger work may be found too expensive.

London: Whittaker and Co.; Dulau and Co.; and D. Nutt.

#### BARKER'S L'EMPRIERE—COMPLETE EDITION.

With Anthon's Improvements, 8vo., price 16s. 6d. bound.

**L'EMPRIERE'S CLASSICAL DICTIONARY**, containing a copious account of Persons, Places, and Remarkable Works of Art, &c., mentioned in Ancient Authors, with Appendixes, &c.

\* \* \* This work has undergone revision from time to time, and the great additions made by Professor Anthon have been introduced. Assistance from other eminent scholars was also obtained by Mr. Barker, and subsequent editors, and a vast quantity of matter thus collected. It is now the fullest dictionary on the subject (containing upwards of 1100 octavo pages double columns), and, as works of reference cannot be too comprehensive, it is hoped it will be distinguished from the old meagre editions and abridgments, which though little less in price do not contain a third of the information.

London: Whittaker and Co.; Simpkin, Marshall, and Co.; H. Washbourne. Eton: E. P. Williams, Rugby, Combe, and Croasley.

#### YOUNG ENGLAND'S LITTLE LIBRARY;

A SERIES OF THIRTEEN CHRISTMAS, NEW-YEAR, and BIRTHDAY GIFT BOOKS, for CHILDREN.

CONTRIBUTED BY Mrs. Hall, Mrs. Howitt, Mr. Albert Smith, Mr. Gasper, Author of the "New Tale of a Tub," and other Authors.

ILLUSTRATED BY ABSOLON, CROWQUILL, and CHAM.

Price One Shilling each.

#### LIST OF BOOKS.

- |   |  |
|---|--|
| Number One. By Mrs. S. C. Hall.   | Perseverance; or, God Helps Them who Help Themselves. By Mr. Clarke. |
| Little Chatterbox. By Mrs. S. C. Hall.                                      | Curiosities of Nature. By Mr. Adam Stock.                            |
| Drolleries in Rhyme. By F. W. N. Bayley, Author of the "New Tale of a Tub." | Curiosities of Art. By Mr. Adam Stock.                               |
| The Savoyard Boy and his Sister, from the German of Kleike. By H. D. Haas.  | Glory, a Tale of Morals Drawn from History. By Mr. Gasper.           |
| Adam the Gardener. By Mr. Clarke.   | The Favourite Pupil. By Mary Howitt.                                 |
| Princess Narina, and her Silver Shoes. By Mr. Clarke.                       | The Picture of the Virgin. By Mary Howitt.                           |
|   | Adventures of Jack Holiday. By Mr. A. Smith.                         |
- London: Wm. S. Orr and Co., Amen-corner, Paternoster-row.

**PRESENT BOOKS FOR THE SEASON.** FISHER, SON, and CO., NEWGATE-STREET and ANGEL-STREET, LONDON.

The Favourite Annual, elegantly bound, 21s., **THE DRAWING ROOM SCRAP BOOK** for 1844. By the Author of "The Women of England;" comprising her Portrait and 35 other Plates. "Its career has been undiminished in popularity, owing to the careful elegance adopted for its completion. Its pictorial embellishments are of a superior order."—*Court Gazette*.

With 16 Plates, elegantly bound, 8s., **THE JUVENILE SCRAP BOOK for 1844.** By the Author of "The Women of England."

"We earnestly hope that many parents will delight their children, at this season, by presenting them with 'the Juvenile Scrap Book.' We greatly admire the skill with which Mrs. Ellis pleases while she instructs her young readers. The embellishments are beautiful, and the exterior splendid and tasteful."

Now ready, with 33 Plates beautifully bound, 21s., **CHINA.—ITS SCENERY, ARCHITECTURE, SOCIAL HABITS, &c.** Drawings by ALLOW—Descriptions by Rev. G. N. WRIGHT.

"A very amusing book; conveys instruction without wearying, and pleases without misleading the reader. The combined efforts of the artist and writer facilitate the acquirement of much that could not be conveyed by either party unassisted, and bring to every capacity of acquisition a great deal of what every body is anxious for and ought to know."—*The Times*.

In Quarto Volumes; the Plates engraved in the best manner from Drawings on the spot by eminent artists, with Historical and Descriptive Notices; handsomely bound, and adapted for the Drawing-room Table or Library:—

Fisher, Son, and Co., the Caxton Press, London.

**SPACIOUS GALLERY**, separate, or with Dwelling-house.—To be LET, near Berkeley-square, a Gallery, 40 feet long, adapted for the exhibition of pictures, or for an artist's studio, either for fresco painting or for works where space is required; separate, or with the whole or a portion of the Dwelling-house. For particulars, inquire of Mr. Imeson, 33, Park-street, Grosvenor-square.

**APARTMENTS for an ARTIST.**—To be LET UNFURNISHED, a Suite of Apartments on the First Floor of a most respectable private house, in a very desirable situation, suitable for an Artist. The Painting-room has a raised window; there is a drawing-room adjoining, and an airy bed-room above. They have been recently occupied by a Portrait-painter, and there are gas-fittings and other requisites that may be taken at a valuation, if desired. Apply at No. 67, Berners-street, Oxford-street.

**E. WOLFF and SON'S NEWLY-INVENTED MATHEMATICAL PENCILS, FOR MATHEMATICIANS, ARCHITECTS, AND ENGINEERS.**—Warranted to retain a very fine Point.

**E. WOLFF and SON**, in introducing their Extra Hard Lead Pencils for Mathematical and Architectural purposes, beg to draw attention to the advantages resulting from their adoption in preference to the ordinary pencils. They are made of six distinct sizes, by which means they can be fitted to all instruments, and are so constructed that each Pencil may be cut in halves without waste; thus making two Pencils each of a length, the most convenient for use, and obviating the difficulties existing with respect to the ordinary Pencils.

E. W. and Son have also Half-round Pencils, suitable for the Spring Bow, thus preventing the necessity of dividing the Pencil down the Centre. They are made of extremely Hard Lead, of the finest quality, which will retain a very fine point, and give clear, even, and distinct lines.—Price 4s. per dozen.

#### PATTERN OF SIZES.

May be had of all Instrument Makers and Stationers, and at the Manufacturers, 23, Church-street, Spitalfields. A sample of each Size will be sent by Post to any part of the Kingdom on the receipt of Postage Stamps equal to the amount.

JUST PUBLISHED, PRICE TWO SHILLINGS,

## INSTRUCTIONS FOR THE PRACTICE OF FRESCO PAINTING,

AS GIVEN IN

THE REPORTS OF THE COMMISSIONERS OF THE FINE ARTS,

COMPILED AND ARRANGED

By W. WINSOR AND H. C. NEWTON,

*Artists' Colour Makers to the Queen, &c.*

In this little work is gathered from the best authorities, ancient and modern, all desirable information on the subject of Fresco Painting, under the following heads:—The Cartoon—The Selection of Lime—Causticity of the Lime—Slaking and Seasoning the Lime—Walls—Preparing the Walls—Colours—Implements—the Process of Painting—Qualities of Execution—Retouching—Moveable Frescoes—the Removal of Frescoes—On Cleaning Frescoes.

In the compilation of these precepts, a main object has been simplicity and perspicuity; they are consequently offered entirely disencumbered of all useless references and quotations, and arranged in working order.

WINSOR AND NEWTON, 38, RATHBONE PLACE.

## TO PAINTERS IN WATER-COLOURS.

Just published, price 1s.,

## THE HAND-BOOK OF WATER-COLOURS,

By W. WINSOR AND H. C. NEWTON,

*Artists' Colourmen to the Queen.*

A brief Treatise on the Properties of every Pigment employed in Water-Colour Painting, with some Account of the Sources whence they are obtained.

LONDON: TILT AND BOGUE, FLEET STREET; WINSOR AND NEWTON, RATHBONE PLACE.

## MILLER'S SILICA COLOURS.

MILLER'S SILICA POWDER.

MILLER'S COLOURS FOR PAINTING ON GLASS.  
MILLER'S GLASS MEDIUM  
FOR WATER-COLOUR PAINTING.

- No. 1. For first colouring or laying on masses of colour.  
No. 2. For second colouring, glazing, and finishing.

MILLER'S SKETCHING COLOURS.  
MILLER'S ANTHYDOR,  
FOR SKETCHING AND PAINTING.  
MILLER'S MINIATURE TABLETS.

MILLER'S DRAWING-PAPER,

Made of pure linen only, without undergoing any  
chemical process.

MILLER'S PREPARATION FOR CLEANING AND  
RESTORING OIL PAINTINGS.

MILLER'S VENETIAN OIL.—Pictures painted entirely with this Oil, upon being submitted to the action of the blowpipe, will vitrify, showing they possess the properties described as belonging to Venetian Pictures when put to the same test.

If a picture should become dull from the action of the atmosphere, or be covered with a bloom, through the use of indifferent varnish, by washing it with cold water, and then applying a little of the above Oil with an old silk handkerchief, it will entirely remove the bloom, and bring out the colours in all their original lustre.

All the ordinary colours, as well as the extras, kept ready prepared in the above Oil at

MILLER'S ARTISTS' COLOUR MANUFACTORY,  
56, Long Acre, London.

PERMANENT DRAWING CHALK,  
in various colours.

E. WOLFF and Son beg to apprise Artists and Amateurs that they have, by effecting great improvements in their CRETA LÆVIS, adapted it for use in the same manner as the ordinary pencil; and effects can now be produced by it equal to water-colour drawings, without the use of water or any other fluid, the various colours blending together with perfect harmony, beauty, and richness. It can be cut to a fine point, and is thus capable of giving a very delicate outline.

FOR SKETCHING FROM NATURE, the great advantages resulting from the adoption of the CRETA LÆVIS must be obvious, as without the use of water, palette, brushes, &c., all the various tints can be obtained with a truthfulness that cannot be surpassed: thus superseding every other method in general use.

The drawings may be carried in a portfolio with safety, as (unlike other crayons) they will neither rub off, nor suffer injury by coming in contact with the usual contents of a portfolio.

The CRETA LÆVIS will not be affected by heat or change of climate.

Specimens may be seen at the Polytechnic Institution, Regent-street; Royal Adelaide Gallery, Strand; and at all respectable Stationers', where the CRETA LÆVIS may be had in sets of twelve, eighteen, twenty-four, and thirty-six, with or without boxes.

## INSTRUCTIONS FOR USE.

In order to produce the delicate shades, the chalk must be cut to a fine point, and worked very lightly on the paper, blending the colours until the required tint be obtained. The deep shades merely require a broader point and increased pressure.

Bristol Board, Crayon Paper, or, in fact, any papers with a fine even surface, but not glazed, are well adapted for the CRETA LÆVIS.

WOLFF and SON beg to recommend their newly invented SKETCHING PENCILS, or PERMANENT BLACK CHALKS.

B B Very Black, for foreground.  
H B Middle Tint.

N Neutral Tint, for distance.

These Pencils are peculiarly adapted for sketching Heads and Landscapes, and are capable of producing a beautiful effect with very little labour. Having an adhesive quality, the drawings may be transmitted without fear of injury.

\*.\* The method of using the Creta Lævis is taught by Mr. W. H. Kearney, member of the New Water-Colour Society.

Manufactory, 23, Church-street, Spitalfields.

THE PARISIAN DETERGENTS render OLD GILDING, LACQUER, and BRONZE, however faded, dirty, or tarnished, equal to new. The effect is sudden, astonishing, and lasting; trouble merely sponging the surface, and expense only a few pence for a large Gilt Frame. Fly-spots are at once removed from Gilding; no necessity, therefore, to cover from the fly. Gold Detergent, 2s. 6d. per bottle; Lacquer and Bronze, 1s. 6d.; Lamp (interior), 1s. 4d. All are innoxious and inoffensive. These Detergents rank with the most valuable chemical discoveries.

Sold by UPTON and Co. (sole proprietors), Lamp Manufacturers, 33, George-street, Hanover-square, and 66, Basinghall-street, City.

N.B. A trial free of charge.—The trade supplied.

## COMPOSITION FOR WRITING WITH STEEL PENS.

STEPHENS' WRITING FLUID.—These Compositions, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—

A BLUE FLUID, changing to an intense black colour.

PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep blue colour.

A superior BLACK INK, of the common character, but more fluid.

A superior CARMINE RED, for Contrast Writing.  
A CARBONACEOUS RECORD INK, which writes instantly black, and being proof against chemical agents, is most valuable in the prevention of frauds.

Also a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from evaporation and dust.

Bottles at 3d. each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense.

Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London.

Sold in bottles, at 3d., 6d., 1s., and 2s. each.

Be sure to ask for Stephens' Writing Fluid.

N.B. These unchangeable Blue Fluids are patent articles: the Public are therefore cautioned against imitations, which are infringements, to sell or use which is illegal.

## STEPHENS' SELECT STEEL PENS.

The utmost possible care having been bestowed upon the manufacture of these articles, so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

**ART-UNION OF LONDON.**—E. F. WATSON, of 201, Piccadilly (Agent to the above Society), having designed a **CHARACTERISTIC FRAME** expressly for the Print of 'Una Entering the Cottage,' respectfully begs leave to call the attention of the Members to it, and feels assured that all who may favour him with their esteemed commands will have every reason to be well satisfied with both price and workmanship; indeed the lively interest he takes in the above Society, causes him to frame the Engravings at an unusually low price.

**UNA ENTERING THE COTTAGE.**—Subscribers of the Art-Union are respectfully informed, they can have the above Engraving mounted in Gilt Bead Moulding Frame, or an inch Moulding Frame of various patterns and new designs, with best Flatted Sheet Glass, for 18s., at P. GARBANATI'S Carving and Gilding Manufactory, 19, St. Martin's-court, Leicester-square. The Engravings fitted up free of extra charge.—To provincial customers all goods purchased at this Manufactory packed and loan of cases free of charge.

**FRAMES FOR ART-UNION PRINTS,** &c.—C. F. BIELEFELD begs to call the attention of Artists, Printsellers, &c., to his numerous assortment of **PICTURE-FRAMES** appropriate for the Art-Union and other Prints; manufactured in his improved Papier Mâché.

"The specimens of these frames, which we have seen, are certainly very beautiful."—Globe, Jan. 17, 1843.

"They look exceedingly attractive, and are in reality as much so as if they had passed through the hands of the carver, and been produced at about ten times the expense. They have a clearness and sharpness that we have seldom or never seen obtained in composition."—ART-UNION.

C. F. B. has just published a new Tariff of his Papier Mâché Frames, illustrated with Sketches of the various Patterns, &c., which will be immediately forwarded to order on the receipt of six Post-office stamps.

Works—15, Wellington-street North, Strand.

**PICTURE-FRAMES, CHIMNEY GLASSES,** CONSOLE TABLES, and every department of **CARVING AND GILDING**, of superior quality, supplied cheaper than by any other manufacturer in the kingdom, by P. GARBANATI, WORKING CARVER and GILDER, 19, ST. MARTIN'S-COURT, St. Martin's-lane. An extensive assortment of Gilt and Fancy Wood Picture Frames, Chimney Glasses, &c., kept ready; handsome ornamented Gilt Window Cornices, 4s. per foot; Gilt Room Moulding, 6d. per yard. Every description of Work regit, cleaned, and repaired in a superior manner at the lowest possible prices. Ladies and Gentlemen waited on with Drawings, and Estimates given, free of charge. A list of the prices of Plate Glass, &c., sent (prepaid) to any part of the kingdom. All Goods purchased at this manufactory carefully packed, and the loan of cases, free of charge. Every article manufactured on the premises.

#### SPLENDID AND SUPERIOR GILT FRAMES.

**CHARLES M'LEAN**, 78, Fleet-street (opposite THE DISPATCH Newspaper-office), respectfully informs the Public, Artists, and the Trade, that they can be supplied with **PICTURE FRAMES**, of the very best manufacture, at prices never hitherto attempted.

A **LARGE SHEET OF DRAWINGS**, representing the exact patterns and prices of one hundred different sized frames, ornamented with designs made expressly for this Manufactory, may be had gratis, and sent free of postage to any part of the kingdom. The Trade supplied with Frames in the Compo. Fancy-wood Frames and Mouldings. Old Frames repaired and regit.

An extensive Stock kept seasoned for immediate delivery.—All Goods taken back, not approved of in three months.

The beautiful print of 'Una entering the Cottage,' framed from 8s. and upwards.

**NOTICE.—PATENT RELIEVO LEATHER** HANGINGS and **CARTON-TOILE OFFICE**, 52, Regent-street, next to the County Fire Office.—The Nobility and Public are respectfully informed, that our Works of Art in the **PATENT RELIEVO LEATHERS**, the **CARTON-TOILE**, &c., can henceforward only be obtained from the Firm of F. LEAKE and CO., 52, Regent-street, where an immense number of Designs are constantly on view and sale, and Patterns of the most beautiful descriptions for Hangings of Rooms, Cornices, Friezes, Arabesques, Panels, Caryatides, Foliage, Pateras, Busts, Mouldings, Book Covers, Album Covers, Screens, &c. &c., in every style of Decoration, and for every possible use to which ornamental leathers can be applied, and at a considerable reduction in price. We beg to notice, that this Firm only will continue to receive monthly from us all new Patterns and Designs in our manufactures.

L. COMETTI and CO., 10, Rue Basse du Rampart, Paris.—May 25, 1842.

PUBLISHED AT THE OFFICE, 198, STRAND.

Having now passed the ordeal of experiment for a long period, and become recognised by the public at large as the Family Paper of largest circulation and influence in the Weekly London Press, and as the *only* illustrated Journal—if *truth* and *news* are to be associated with art-embellishments—it is unnecessary (when an important improvement in what may be called the statistics of the paper requires a new public announcement) to re-sume the form of a mere prospectus—or to recapitulate the principles and policy which have made themselves so thoroughly known throughout the empire, and we have reason to believe not more known than respected and approved.

But in proportion as the **ILLUSTRATED NEWS** has proved itself *established*—in proportion as it has found some imitations of it dying and others clinging hopelessly to life—in proportion as the public have rushed towards it the more eagerly when luring promises tempted them upon rival paths—in proportion as demand upon it has grown into a prosperity beyond its means—the proprietors have felt the difficulty of their emergency—and deemed themselves compelled to repose upon their steady and unchanging circulation, until they could command the opportunity of returning more cordially the public embrace.

That opportunity has now arrived. For some time past their extensive premises have been preparing for the reception of two beautiful Steam Printing Machines, upon an improved principle—which will in a few days be fixed and enable the proprietors to distribute any number that may be required of their paper within the period of publication—not only at times to suit the convenience of the public—but with a higher degree of finish and refinement in the mechanical work of art than has ever yet been attained in periodical literature. Then will those vast resources which the Journal has hitherto only developed according to its means of supply—at once meet the whole spirit of the demand, and the proprietors can promise a degree of rapidity in the illustration of news events—of fidelity in the realization of public intelligence by art—of power in the multiplication of copies of that intelligence for the million—such as will prove less what the paper has *done* than what it will *do*—less the influence and strength it has exhibited than the strength and influence which it has been obliged to conceal.

For this auspicious consummation of a young prosperity the proprietors have ardently longed, and they now rejoice in being able emphatically to announce it to the public.

The **ILLUSTRATED NEWS**—hitherto impeded only by its own prosperity—now—by the advancement of science—succeeds in bringing its machinery to keep pace with its success.

The result is that the proprietors need no longer be afraid to extend their publicity. They may now swell the note of preparation for the illustration of every event upon the tapis of public life, without fear of disappointing any of the responsive orders which their manifesto may call forth. Truth has hitherto been their guide in the field of art—truth with lavish expenditure for its attainment and scorn of the untravelled deception which in false imitators "still aped the travelled lore it never knew." As in the case of the Queen's Visit to Scotland, and subsequently to France and Belgium, their artists will "follow the footsteps of modern adventure," and record them faithfully for the pleasurable instruction of the people and the historic information of future time.

The **ILLUSTRATED LONDON NEWS** need hardly refer to its principles. They have made it the recognised Family Paper of the Empire. It has advocated—it *shall* advocate *VIRTUE* only (virtue wedded to religion) in morals and in politics alike. No party—no predilections of sect—of tribe—in doctrine—in philosophy—in the affairs of Church or State—but an unswerving impartiality—a high dignity of purpose—a leaning to what seems the right—and to that only—for the love of God and man. The whole spirit of the natural justice and freedom of the British constitution—the Journal would have reflected from every phase of its career.

Its objects have been long before the world. It is the faithful expounder of the *present*, to *itself*—and to the *future*. The mind and heart of man—the manners, natural and artificial—the changes of his intellectual nature worked out by art, science, literature, and general civilization; the government—the commerce—the pleasures and the education of the people—in a word, the living philosophy of the world, are to be reflected in this matter-of-fact news mirror—and reflected they are—have been—and shall be, with vivid fidelity and truth.

There is only this change in the condition of the paper, that the proprietors now know that they can keep pace with the kind enthusiasm of public patronage, and that if they are admitted by their novel and successful enterprise to have done good, they have now the means of increasing that good fourfold.

☞ The **ILLUSTRATED LONDON NEWS** can be had if ordered of Booksellers and Newsmen, price 6d., and may be sent free of postage to all parts of the United Kingdom.

**MESSRS. HENRY GRAVES AND COMPANY,**

Have the honour to announce the Publication, during the year 1843, of the following highly interesting and  
**SPLENDID WORKS OF ART,**

Of which Impressions or Proofs may be had of all Print and Book Sellers throughout the Kingdom:—

**THE CORONATION OF HER MAJESTY QUEEN VICTORIA,**

Engraved in the finest style of Art by H. T. RYALL, Esq., from the magnificent Original Picture painted by GEORGE HATTEY, Esq., M.A.S.L.  
 Prints, £4 4s.; Proofs, £8 8s.; Proofs before Letters, £12 12s.

**THE WIDOWED DUCK.**

Painted by EDWIN LANDSEER, R.A., and Engraved by JOHN BURNET, F.R.S.,  
 from the original picture in the possession of W. Ellis Gooling, Esq.  
 Prints, £1 1s. .... Proofs, £2 2s. .... Before Letters, £3 3s.

**LASSIE HERDING SHEEP.**

Most exquisitely engraved in the Mezzotinto style of Art by JOHN BURNET,  
 F.R.S., the original picture painted by EDWIN LANDSEER, R.A.,  
 Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s.

**CHILDREN FEEDING RABBITS.**

Engraved in the finest style of Mezzotinto from the very interesting picture painted by EDWIN LANDSEER, R.A., for the Hon. Mrs. Bathurst, and forming an exact  
 companion to 'THE SUTHERLAND CHILDREN,' by SAMUEL COUSINS, A.R.A.  
 Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s.

**THE HAWKING PARTY IN THE OLDEN TIME.**

Engraved in Mezzotinto by CHARLES G. LEWIS, from the original gallery picture by EDWIN LANDSEER, Esq., R.A., the same size as 'BOLTON ABBEY,' by  
 SAMUEL COUSINS, A.R.A.  
 Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s.

**THE HAWK AND THE FALCON.**

Engraved in Mezzotinto by C. G. LEWIS, as Supporters to the beautiful Plate of the 'HAWKING PARTY IN THE OLDEN TIME,' from the original pictures  
 painted by EDWIN LANDSEER, Esq., R.A., in the possession of William Wells, Esq.  
 Prints, £1 1s. .... Proofs, £2 2s. .... Before Letters, £3 3s each Plate.

**MORNING OF THE CHASE—HADDON HALL IN DAYS OF YORE.**

Engraved in the highest style of Art by H. T. RYALL, from the beautiful original drawing by FREDERICK TAYLOR.  
 Price: Prints, £4 4s. .... Proofs, £7 7s. .... Before Letters, £10 10s.

**WORKS OF SIR THOMAS LAWRENCE,**

Parts 11, 12, and 13 of the  
 CONTAINING  
 'THE BARING FAMILY'—'J. ABEKNETHY, Esq.'—'THE LATE 'MARQUIS  
 OF LONDONDERRY'—'THE RIGHT HON. J. P. CURRAN,' AND  
 'LITTLE RED RIDING HOOD,' &c. &c.  
 Price: Prints, 12s. .... Proofs, £1 1s. .... Before Letters, £1 11s 6d.

**THE NAUGHTY BOY.**

Engraved in the line manner by W. FINDEN, from the original picture by  
 EDWIN LANDSEER, R.A., and forming an exact companion to 'LITTLE  
 RED RIDING HOOD,' by the same Artists.  
 Price: Prints, 7s. 6d. .... Proofs, 15s. .... Before Letters, £1 11s. 6d.

**THE SHOOTING PARTY AT RANTON ABBEY.**

Engraved in the finest style of Mezzotinto, by W. H. SIMMONS, from the celebrated picture, by FRANCIS GRANT, A.R.A.  
 This Engraving forms an appropriate and indispensable companion to Mr. Grant's very popular series of 'BRITISH FIELD SPORTS,' and contains Portraits of the  
 Earl of Lichfield, Viscount Melbourne, Earl Sefton, and other distinguished Noblemen.  
 Price: Prints, £3 3s. .... Proofs, £5 5s. .... Before Letters, £6 6s.

**VIEWS ON THE NILE,**

FROM CAIRO TO THE SECOND CATARACT.  
 By OWEN JONES. With Historical Notices of the Monuments, &c., by SAMUEL  
 BIRCH, Esq., Senior Assistant in the Department of Antiquities, British  
 Museum, and Member of the Egyptian Societies of Cairo.  
 Price, Imperial Folio, half morocco, £4 4s.

**HADDON HALL, DERBYSHIRE,**

Consisting of Twenty-six of the most beautiful Interiors and Exteriors of this  
 interesting Remains of the Olden Time. Drawn on the spot, and on Stone, by  
 DOUGLAS MORISON, Esq., of a uniform size with the work on Belgium and  
 Germany, by LOUIS HAGHE.  
 Price, h. b., imp. fol., £4 4s. .... Coloured and mounted in a Portfolio, £10 10s.

**THE HIGHLAND WHISKEY-STILL.**

Engraved in the most beautiful line manner by ROBERT GRAVES, A.R.A., from the very beautiful picture painted for his Grace the Duke of Wellington, K.G., by  
 EDWIN LANDSEER, R.A.  
 Prints, £2 2s. .... Proofs, £4 4s. .... Before Letters, £6 6s. .... Artists' Proofs (very few left), £8 8s.

**PASSES, FORTS, AND CITIES OF THE SCENE OF WAR IN INDIA.**

Lithographed by LOUIS HAGHE from the original Drawings by Dr. JAMES ATKINSON.  
 Including Views of Caubul, Candahar, Ghuznee, Kwettah: the Bolan, Siri-Bolan, Koojah, Siri Kajoer, Kojak, and all other celebrated Passes.  
 Price: Imperial Folio, half morocco, £4 4s. .... Coloured and mounted in Portfolio, £10 10s.

**CHARACTER AND COSTUME OF AFGHAUNISTAN.**

Lithographed by CHARLES HAGHE, from the original drawings by CAPTAIN L. W. HART, of the 22nd B. I.  
 Including authentic resemblances of all the most celebrated Chieftains, viz., Ukbar Khan, Shah Shoojau, Sufter-jung, Shahzadu Timoor, Hajee Khan Kauker, the Civil and  
 Military Functionaries, and Costumes of the Country beyond the Indus, the Sandal Gates, Kyber Pass, Jellalabad, &c. &c. &c.  
 Price: Imperial Folio, half morocco, £4 4s. .... Coloured and mounted in Portfolio, £10 10s.

**HIS ROYAL HIGHNESS PRINCE ALBERT, K.G.**

Engraved in the finest style of Art by H. T. RYALL, from the Original Picture painted by G. PATTEN, A.R.A.,—Price: Prints, £3 3s.; Proofs, £5 5s.; before Letters, £8 8s.

**THE BEDALE HUNT.**

Engraved in the finest style by W. H. SIMMONS, from the beautiful Picture  
 painted by ANSON A. MARTIN, Esq., and presented to Mark Milbank, Esq.,  
 by the Gentlemen of the Hunt.  
 Price: Prints, £3 3s. .... Proofs, £5 5s. .... First Proofs, £6 6s.  
 This splendid Engraving contains no less than Forty-two Portraits of the most  
 distinguished Sportsmen connected with the Hunt.

**THE GAMEKEEPER'S RETURN.**

Engraved in the finest style of Art by G. H. PHILLIPS, from the beautiful  
 Painting by T. SIDNEY COOPER.  
 Price: Prints, £1 1s. .... Proofs, £2 2s. .... Before Letters, £3 3s.  
 "This Print is intended as a Companion to J. F. Lewis's 'Highland Hospi-  
 tality,' and a more pleasing pair of Engravings we do not remember to have  
 published."

Published by HENRY GRAVES and WARMSIDE, Printers, &c., to Her Majesty and Prince Albert, 6, Pall-Mall.
